SALICORNIA, jointed glass-wort, or Sall:uort: A genus of the monogynia order, belonging to the monandria clafs of plants; and in the natural method ranking under the 12 th order, Holoracea. The calyx is ventricofe, or a little fwelling out and entire ; there are no petals, and but one feed. There are four ipecies, of which the moll remarkable are, 1. The fruticola, with obtufe points, grows plentifully in moft of the falt marthes which are overflowed by the tides in many parts of England. It is an annual plant, with thick, fucculent, jointed ftalks, which trail upon the ground. The flowers are proluced at the ends of the joints toward the extremity of the branches, which ate finall, and fcarce difcernible by the naked eye. 2. The
perennis, with a flurubby branching Ratk, grows :aturally in Shacpper ifland. 'This hath a fhrubley brarech. ing falk about fix inches long; the points of the articu. lations are acute; the flalks branch from the battom, and form a kind of pyramid. They are perennal, and produce thicir flowers in the fanc marner as the former.
The inhabitants rear the fea-coalts where thefe plants grow, cut them up toward the latter end of fummer, when they are fully grown; and, after having dried them in the fun, they burn them for their afaes, which are ufed in making of glafs and foap. Thefe he:b; are by the country people called kelp, and promifcuounly gathered for ufe. See the article Salsola ; alfo Dyeing of Leather, p. 750. note A.

SALII, in Roman antiquity, priets of Mars, whereof there were 12, inftituted by Numa, wearing painted, particoloured garments, and ligh bounets; with a fecl cuiraffe on the breaft. They were called falii, from fallare "to dance;" becaufe, after allifling at facrifices, they went dancing about the ftreets, with bucklers in their lefthand, and a rod in their right, Atriking mufically with their rods on one another's bucklers, and finging hymns in honour of the gods.

SALINO, one of the Lipari iflands, fituated between Sicily and Italy, confilts of two mountains both in an high fate of cultivation. The one lying more towards the north than the other is rather the highelt of the two, and is calied del Capo, "the head." The other is called del'a Foffa felice, or "the happy valley." One-third of the extent of thefe hills from the bottom to the fummit is one continued orchard, confinting of vines, olive, fig, plum, apricot, and a valt diverfity of other trees. The white roofs of the houfes, which are every where interfperfed amid this diverlity of verdure and foliage, contribute to variegate the profpect in 2 very agreeable manner. The back part of almoft all the houles is fhaded by an arbour of vines, fupported by pillars of brick, with crois poles to fultain the branches and foliage of the vines. Thofe arbours thelter the honfes from the rays of the fun, the heat of which is quite fcorching in thefe fouthern regions. The vines are extremely fruitful; the poles bending nuder the weight of the grapes.

The feenes in this illand are more interefting to the lover of natural hiftory than to the antiquarian. See Reticulum.

On the fouth fide of the illand, however, there are fill to be feen fome fine ruins of an ancient bath, a Roman work. They confit of a wall of 10 or 11 fathoms in extent, and terminating in an arch of no great beight, of which ouly a fmill part now remains. The building feems to have been reduced to its prefent fate rather by the ravages of mon than the injuries of time. Almolt all the houfes in the inland are built of materials which have belonged to ancient noonuments. The ancients had, in all probability, baths of frelh as well as of filt water in this inland; for whenever the prefent inhabitants have occation for a fpring of Irelb water, they have nuly to dig a pit on the fhore, and pure fweet water tlows in great abundance.

There were formerly mines of alum here, from which the inlabitants drew a very confiderable ycarly revenue. But whether they are exh.unfed, or whatever circumflance may have caufed them to be given up, they are
S.lii,

Salitio.

Solibury. now no longer known. The ifland abounds in a variety of fruits.

On the eaft fide it is very populous. There are two places which are both called Lingua "the tongue," and which contain a good number of inhabitants; the one is near Saline, the other is dittinguifhed by the name of St. Narrina: there are beldes thete two other villages. All thefe places together may contain about 4000 inhabitants: the circumference of the ifland may be about \(I_{+}\)miles.

SALISBURY, the capital of the county of Wiltfhire in England, fituated in W. Long. 1. 55. N. Lat. 5t. 3. This city owed its firft rife to its cathedral, which was begnn in \(\mathbf{1 2 1 9}\), and finithed in 1258 . According to an eftimate delivered in to Henry III. it coft forty thoufand marks. It is a Gothic building, and is certainly the moft elegant and regular in the lingdom. The doors and chapels are equal in number to the months, the windows to the days, and the pillars and pilaftes to the hours in a year. It is built in the form of a lantern, with a fire in the middle, and nothing but buttreffes and glafs windows on the outfide. The fpire is the highelt in the kingdom, being 410 feet, which is twice the height of the monument in London. The pillars and pilatres in the church are of fufile marble; the art of making which is now either entirely loft or little known. This magnificent church has lately undergone moft beautiful alterations; with an addition of two fine windows, and an organ prefented by the king. The roof of the chapter-houfe, which is 50 feet in diameter, and 150 in circumference, bears all upon one flender pillar, which is fuch a curiofity as can hardly be matched in Europe. The turning of the weftern road through the city in the reign or Edward III. was a great advantage to it. The chancellorhip of the moft noble order of the garter, which is annexed to this fee, was firt conferred on bihhop Richard Beauchamp. The hofpital of St . Michael's, near this city, was founded by one of its bifhops. Dr. Seth Ward, bilhop of this fee in the reign of Charles II. contributed greatly to the making the river Avon navigable to Chrift church in Hampfhire. The fame prelate in 1683, built an hofpital for the entertaimment of the widows of poor clergymen. There are three other churches belide the cathedral, which is without the liberty of the city, and a greater number of boarding fchools, efpecially for young ladies, than in any other town in England. Here is a manufacture of diruggets, flannels, bone-lace, and thofe cloths called Soli,ifury whites; in confideration of which, and its fairs, markets, allizes, boarding-fcheols, and clergy, the city nay be jufly fuid to be in a flourilhing condition. It was incorporated by Hinry 1II. and is governed by a mayor, bigh-fteward, recorder, deputy-recorder, 24 aldermen, and 30 affiftants or common council men. The number of fouls is about 10,000 . A new council chamber is jul now (June 179t) building here with proper courts of jultiee, by the earl of Radnot; to which Mr. Hufley is alfo a great benefagor. That quarter called the clofe, where the canons and preberdaries live, is like a fine city of itfelf. Herc is an af. fembly for the ladies every Tuefday, and coaches fet out from hence to London every day. In this town are feveral chaits-fchools; the expence of ore of them
is entircly defrayed by the bifhop. The city gives the title of carl to the noble family of Cecil.
SAlisburt Plain, the extenfive downs in Wilthire, which are thus denominated, form in fummer one of the mof delightful parts of Great Britain for extent and beauty. It extends 28 miles weft of Weymouth, and 25 eaft to Winchefter; and in fome places is near 40 miles in breadth. That part about Salifury is a chalky down, and is famous for feeding numerous flocks of theep. Confiderable portions of this trate are now enclofing, the advantages of which are fo great, that we hope the whole will indergo fo beneficial an alteration.

SALIVA, is that fluid by which the mouth and tongue are continually moifened in their natural ftate; and is fupplied by glands which form it, that are called falivary glands. This humour is thin and pellucid, incapable of being concreted by the fire, almoft without tafte and fmell. By chewing, it is expreffed from the glands which feparate it from the blood, and is intimately mised with our food, the digeftion of which it greatly promotes. In hungry perfons it is acrid, and copiouly difcharged ; and in thofe who have fafted long it is highly acrid, penetrating, and refolvent. A too copious evacuation of it, produces thirft, lofs of appetite, bad digeftion, and an atroplyy.

SALIVATION, in medicine, a promoting of the flux of falva, by means of medicines, mofly by mercury. The chief ufe of falivation is in difeafes belonging to the glands and membrana adipofa, and principally in the cure of the venereal difeafe; though it is fometimes alfo ufed in epidemic difeafes, cutaneous difeafes, \&c. whofe crifes tend that way.

SALIX, the willow, in botany: A genus of the diandria order, belonging to the dicecia clalis of plants; and in the natural method ranking under the 50th order, Amentacia. The amentum of the male is fealy; there is no corolla; but a nectariferous glandule at the bafe of the flower. The female amentum is fealy; there is no corolla; the fyle bifid; the capfule unilocular and bivalved; the feeds pappous. The willow trees have been frequently the theme of poetical defcription, both in ancient and modern times. In Virgil, Horace, and in Ovid, we have many exquifite allufions to them and their feveral propercies; and for a melancholy lover or a contemplative poet, imagination cannot paint a fitter retreat than the banks of a beautiful river, and the fhade of a drooping willow There are 31 fpecies; of which the moft remarkable are, 1. The caprea, or common fallow-tree, grows to but a moderate height, having fmooth, dark-green, brittle branches: oval, waved, rough leaves, indented at top, and woolly underneath. It grows abundantly in Great Bitain, but more frequentIy in dry than moif fituations: it is of a brittle nature, fo is unfit for the banket-makers; but will fen ve for poles, feakes, and to lop for fire-wood; and its timber is grood for many purpoies. 2. The alba, white, or filver leaved willow, grows to a great height and confiderable bulk, laving imooth pale-green thoots; long, fpear-fhaped, acuminated, fawed, lilvery-white leaves, being downy on both fides, with glands below the ferratures. This is the common white willow, which grows abundantly about towns and villages, and by the fides of rivers and brooks, \&c. 3. The vitellina, yellow or golden willow, grows

Salix, Sallee.
grows but to a moderate height ; having yellow, very pliant fhoots; oval, acute, ferrated, verf finooth leaves, with the ferratures cartilaginous, and with callous punctures on the footitalks. 4. The purpurea, purple, or red willow, grows to a large height, having long, reddifh, very pliable fhoots, and long feear-fhaped, ferrated, fmooth leaves, the lower ones being oppofite. 5 . The viminalis, o: ofier-willow, grows but a moderate height, having ilender rod-like branches; very long, pliant, greenith thoots; and very long, narrow, fpearthaped, acutc, almoft entire leaves, hoary, and filky underneath. 6. The pentandria, pentandrous, broadleaved, fweet-fcented willow, grows to fome confiderable ftature, having brownifh-green branches; oblong, broad, ferrated, fmooth, fwect-fcented leaves, fhining above; and pentandrous flowers. 7. The triandria, or triandrous willow, grows to a large fature, having numcrous, erect, greyifh-green branches, and pliant thoots; oblong, acute-pointed, ferrated fmooth, thining. green leaves, eared at the bare; and triandrous flowers. 8. The fragilis, fragile, or crack-willow, rifes to a middling ftature, with brownilh, very fragile, or brittle branches, lorg, oval-lanceolate, fawed, fmooth leaves of a thining-green on both fides, having dentated glandular foot-ftalks. This fort in particular being exceedingly fragile, fo that it eafily cracks and breaks, is unfit for culture in ofier-grounds. S. The Babylonica, Babylonian pendulous falix, commonly called weeping zwillocu, grows to a largill fize, having numerous, long, flender, pendulous branches, hanging down loofely all round in a curious manner, and long, narrow, fpear-thaped, ferrated, fmooth leaves. This curious willow is a native of the eaft, and is retained in our hardy plantations for ornament, and exhibits a moft agreeable variety; particularly when difpofed fingly by the verges of any piece of water, or in fpacious openings of grafsground.

All the fpecies of falix are of the tree kind, very hardy, remarkable faft growers, and feveral of them attaining a confiderable itature when permitted to run up to ftandalds. They arc moftly of the aquatic tribe, being generally the molt abundant and of moft profperous growh in watery fituations: they however will grow freely almoft any where, in any common foil and expofure; but grow confideribly the falieft and frongeft in low moif land, particularly in manfly fituations, by the verges of rivers, brooks, and cther waters; likewife along the fides of watery ditches, \&ic. which places often lying wate, may be employed to good advantage, in plantations of willows, for different purpofes.

SALLEE, an arcient and confiderable town of Afric:a in the kingdom of Fez, with a harbour a:ad feycral ports. The harbour of Sallec is one of tle bett in the country; and yet, on account of a bar that lies acrefs it, fhips of the fmalleft draught are forced to unlnad and take out their guns before they can get into it. There are dheks to build thips; but they are hardly cyer ufed, for want of ikill and matesials. It is a large place, divided into the Old and New Towns, by the tiwer Guero. It has lorg been famrus for its ruvers or pirates, who make prizes of all the chriftian mips that come in their way, except there is a treaty to the contrary. The town of Sallee in its prefent itate, though large, preferts nothing worthy the obfer:ation of the
travelle: except a battery of 24 pieces of carrona fronting the fea, and a redoubt at the entrance of the river, which is about a quarter of a mile broad, and penctrates feveral miles into the interio country. W. Lon 30. N Lat. 34. 0.

SALLET, or Sallab, a difh of eatable herbs, ordinarily accompanying roaft meat; compofed chiefly of crude, fief herbage, feafoned with falt, oil, and vinegar

Menage derizes the word from the Latin falata; of ful, "falt;" others from fa'cedo; Du-Cange frum falgama, which is ufed in Aufonius and Columella in the fame fenfe.

Scme add muftard, hard cygs, and figar ; cthers, pepper, and other fpices, with oranre-peel, faffon, \&c.

The principal fallet-herbs, and thofe which ordinarily make the bafis of our Englifa callets, are letuce, celery, endive, creffes, radih, and rape; along witl: which, by way of furniture, or additionals, are ufed purllane, fpinach, forrel, tarragon, burnet, corn-fallct, and chervil.

The gardeners call fome plants finall herls in fallets; thefe foould always be cut while in the feed-leaf: as creffes, muftard, radifh, turnep, fpinach, and lettuce; all which are raifed from feeds fown in drilis, or lines, from the middle of February to the end of March, under glaffes or frames; and thence to the middle of May, upon natural beds, warmly expoled; and during the fummer heats in more fhady places; and afterwards in September, as in March, \&.c.; and laftly, in the rigcur of the winter, in hot-beds. If they chance to be frocen in very frofty weather, futting them in fpring-wates two hours before they be ufed, lecovers them.

SALLO (Denis de), a French writer, famous for being the projector of literary journals, was born at Paris in 1626 . He fludied the law, and was admitted a counfellor in the parliament of Paris in 1652 . It was in 1664 he fchemed the plan of the Fournal des \(S_{\text {çavans }}\); and the year following began to publith it under the name of Sieur de Heronville, which was that of his valet de chambre. But he played the critic fo feverely, that authors, furprifed at the novelty of fuch attack:, retorted fo powerfilly, that M. de Sallo, unable to weather the florm, afier be had publifted his third Journal, declined the undertaking, and turned it over to the abbe Gallois; who, without prefuming to criticife, contented himfelf with merely giving titles, and making extracts. Such was the origit of literary journals, which afterwards fprang up in other countries under dilferent titles; and the duccefs of them, under juticious management, is a clear proof of their t.itity. M. de Sallo died in 166 y .

SAlLUSTIUS (Cains Cripus), a celebrated Ro. man hittorian, was born at Amrernum, a city of f:ally in the year of Rome 669, and before Chrif 85 . \(11_{1}\); education was liberal, and he made the beft uie of it. His Ruman Hiftory in fix books, from the death c! Sylla to the confpiracy of Catiline, tire great werk fre nit which he chiefly denived bis gloyy among the ancients, is unfortunately lof excerting a tew frat ments; but his two setached pieces of Hiltory which happily temain entire, are dufficient to jultify the great enconiums be has received as a witer. - He has had the lingular honour to be twice tranflated by a :oyal hand: firf by Quen Elizabet, ascording to Camden,

614
\end{array}\right] \quad \text { SAI }
\]
\(\therefore\) :unil: and feconally, by the prefent Infant of Spain, whofe vertion of this elegant biftorian, lately pinted in foliv, is one of the mof besutiful books that any countij) has produced fince the invention of pointing. No man has inveighed more tharply againt the vices of his age than this hiforian ; yet on man had lefs pretenfions to virtue than he. His youth was fpent in a moit lewd and profgate manner; and his patiomony :lmoft fyuandered away when he had fearcely taken poffelion of it. Marcus Varro, a writer of undoubted credit, relites, in a fragnent preferved by Aulus Gel. lius, that Salluft was actually canght in bed with Faufta the danghter of Sylla, by Milo her hufband; who ficourged him very leverely, and did not fuffer him to depart till he had redeemed his liberty with a confiderable fum. A. U. C. 694, he was made queftor, and m m - tribune of the people; in neither of which places is lie allowed to have acquitted himfelf at all to his homour. By virtue of his queftorhip, he obtained an admilfun into the fenate; but was expelled thence by the centors in rot, on account of his immoral and debauchod way of lite. In the year 705 Cxfar reftored him to the dignity of a fenator; and to introduce him into the houfe with a better grace, made him queftor a fecond time. In the admmiltration of this office he behaved himielf very fcandaloully; expofed every thing to fale that he could find a purchafer for; and if we may believe the anthor of the invective, thought nothing wrong which he had a mind to do: Nibil non venale babuerit, cujus aliquis emptor fuit, nibil non aquum et verum duxit, quod iffi fucere collibuiffet. In the year 707, when the African war was at an end, he was made pretor for his fervices to Cafar, and fent to Numidia. Here he ated the fame part as Verres had done in Sicily; outrageoully plundered the province; and returned with fuch immenfe riches to Rome, that he purchated a moft magnificent building upon mount Quirinal, with thofe gardens which to this day retain the name of Saliffian gardens, befides his country houfe at Tivoli. How he ipent the remaining part of his life, we have noo account from ancient writers. Eufebius tells us, that he married Terentia, the divorced wife of Cicero; and that he died at the age of 50 , in the year 710 , which was about four years before the battle of Actitum. Of the many things which he wrote, befide his Hiftonies of the Catilinarian and Jugurthine wars, we have fome orations or fpeeches, printed with his fragments.

SAlLY-ports, in fortification, or Poftrn-Gates, as they are fometimes called, are thofe under-ground palfages which lead from the inner works to the outward ones; fuch as from the higher flank to the lower, or to the tenailes, or the communication from the middle of the curtain to the ravelin. When they are made for men to ge through only, they are made with licps at the entrance and going out. They are about 6 lect wide and \(8 \frac{1}{2}\) feet high. There is alfo a gutter or floore made under the fally-ports, which are in the middle of the curtains, for the water which runs down the fteets to pafs into the ditch; but this can only be done when they are wet ditches. When fally-ports lerve to carry guns through them for the out-works, inflead of making them with fteps, they mult have a gradual flope, and he 8 feet wide.
SALMASIUS (Claudius), a French writer of un-
common abilities and immenfe erudition, defcended
from an ancient and noble family, and born at or near Semur in 1596. His mother, who was a protefant, infufed her notions of religion into him, and he at length converted his father: he fettled at Leyden; and in 1650 paid a vifit to Chrillina queen of Sweden, who is reported to have fhewn him extreordinary marks of regard. Upon the violent death of Charles I. of England, he was prevailed on by the royal family, then in exile, to write a defence of that king; which was anfwered by the famous Milton in 1651 , in a work entitled Definfio pro Populo Anglicano contra Claudii Salnafii Defenfionent Regiam. 'ilhis book was read over all Eurupe; and conveyed fuch a proof of the writer's abilities, that he was refpected even by thofe who hated his principles. Salmatius died in 1653; and fome did not fcruple to fay, that Milton killed him by the acuteneis of his reply. His works are numerous, and of various kinds; but the greateft monuments of his learning are, his Note in Hylloria Augufte Scriptores, and his Exercitationes Pliniana in Solinum.

SALMO, the Salmon; a genus of the order of abdominales. The bead is fmooth, and furnithed with teeth and a tongue; the rays of the gills are from four to ten; the back-fin is fat behind; and the belly-fins have many rays. There are 29 fpecies; of which the moft remarkable are,
1. The falar, or common falmon, is a northern fifh, being unknown in the Mcditerranean fea and cther warm climates: it is found in France in fome of the rivers that empty themfelves into the ocean, and north as far as Greenland; they are alfo very common in Newfoundland, and the northern parts of North America. Salmons are taken in the rivers of Kamtfchatka; but whether they are of the fame fipecies with the European kind, is not very certain. They are in feveral countries a great article of commerce, being cured different ways, by falting, pickling, and drying: there are ftationary fiheries in Iccland, Norway, and the Baltic; but we believe no where greater than thofe at Colraine in Ireland ; and in Great Britain at Berwick, and in fome of the rivers in Scotland. In the Hiftory of Cumberland, we are told that "they depofit their fpawn even on the upper fide of Pooley:bridge, but always in the flream of Eamont. At thofe times it is not an eafy matter to drive them away by throwing Itones at them. They will take a bait of roe, or fmall fifh, while upon the rud, or laying their fpawn. We have never heard of a falmon or falmon fmeit being feen in the lake. They go up the river Dcrwent in September, through the lake of Baffenthwaite, up the river which runs through Keiwick into the vale of St John, where they depofit their fpawn in the fmall ftreams nnd feeders of the lake. The young falmon are called falmon fmelts, and go down to the fea with the firt floods in May."

The falmon was known to the Romans, but not to the Greeks. Pliny fpeaks of it as a finh found in the rivers of Aquitaine; Aufonius enumerates it among thofe of the Mofel. The falmon is a fith that lives both in the falt and frefh waters; quitting the fea at certain feafons for the lake of depofiting its fpawn, in fecurity, in the gravelly beds of rivers remote from their mouths. There are farce any difficulties but what they will overcome, in order to arrive at places fit for their
their purpofe: they will afcend rivers hundreds of miles, force theinfelves againit the moft rapid ftreams, and fpring with amazing agility over catarakts of feveral feet in height. Salinon are frequently taken in the Rhinc as ligh up as Bafil ; they gain the fources of the Lapland rivers in fpite of their torrent-like currents, and furpais the perpendicular falls of Leisflip, Konnerth, and Pont Abcrglaftyn. It may here be proper to contradiet the vulgar error, of their taking their tail in their mouth when they attempt to leap; fuch as Mr Penmant faw, fprung up quite ftraight, and with a ftrongtremulous motion.

The falmon is a fin fo generally known, that a very brief defeription will ferve. The largeft we ever heard of weighed 74 pounds. The colour of the back and fides are grey, fometimes fpotted with black, fometimes plain: the covers of the gills are fubject to the fame variety; the belly filvery; the nofe fharp-pointed; the end of the under jaw in the males often turns up in the form of a hook; fometimes this curvature is very confiderable: it is faid that they lofe this hook when they return to the fea. The teeth are lodged in the jaws and on the tonguc, and are flender, but very fharp; the tail is a little forked.
2. The trutta, or leatrout, migrates like the true falmon up feveral of our rivers; ipawns, and returns to the fea. That defcribed by Mr Pennant was taken in the Tweed below Berwick, June 1769. The fhape was more thick than the common trout; the weight three pounds two ounces. The irides filver; the head thick, fmooth, and dulky, with a glois of blue and green; the back of the fame colour, which grows fainter towards the fide-line. The back is plain, but the fides, as far as the lateral line, are marked with large diftinct irregular fhaped fpots of black: the lateral line ttraight; the fides bencath the line, and the belly, are white. Tail broad, and even at the end. The dorfal fin had 12 rays; the pettoral 14 ; the ventral 9 ; the anal 10 . The feth when boiled is of a pale red, but well-flavoured.
3. The fario, or trout; the colours of which vary greatly in different waters, and in different feafons. Trouts differ alin in fize. One taken in Llynallet, Denhighthire, which is famous for an excellent kind, meafured 17 inches, its depth three and three-quarters, its weight one pound ten ounces; the head thick; the nofe rather fharp: the upper jaw a little longer than the lower; both jaws, as well as the head, were of a palc brown, blotched with black; the tceth fharp and frong, difpofed in the jaws, roof of the mouth, and tongue. The back was durky; the fides tinged with a purplifh bloom, marked with deep purple fpots, miaed with black above and below the fideline, which was frait; the belly white. The firf dorfal fin was fpotted; the fpurious fin brown, tipped with red ; the pectoral, ventral, and anal fias, of a pale brown; the edges of the anal fin white; the tail very little forked when extended.-The ftomachs of the common trouts are uncommonly thick and muf. cular. They feed on the thell-fifh of lakes and rivers, as well as on fmall filh. 'They likewife take into their ftomachs gravel or fmall ftones, to aftit in comminuting the teftaceous parts of their food. The trouts of certain lakes in Ireland, fucls as thofe of the province of Galway and fome others, are re.
markable for the great thicknefs of their fiomachs, which, from fome flight refemblance to the organs of digeftion in birds, have been called gis:ards; the Irilh name the fpecies that has them gillaroo trouts. Thefe flomachs are fometimes ferved up to table meder the furmer appellation. Trouts are moft voracious fifh, and alford escellent diverfion to the angler. The paffion for the fport of angling is fo great in the neighbourhood of London, that the liberty of fifhing in fome of the ftreams in the adjacent counties is purchafed at the rate of 101. per annzm. Thefe fint fhift their quarters to fpawn ; and, like falmon, make up towards the heads of rivers to depolit their roes. "The under jaw of the trout is fub. ject, at certain times, to the fame curvature as that of the falmon.
" It is caught (fay the editors of the Hiftory o. Cumberland) in verygreat plenty at all feafons of the year; one weighing a pound and a half is an ufual fize, though fome are canght of 4 lb . weight. Fire or fix ounces is a common weight; the largeft are commonly the beft for the table, when they cut of a decp falmon colour. In the winter nuonths great quantities are potted aloner with the charre, and fent 10 Lendon, \&c.--Ths angler, on a favourable day, here enjoys his diverfion in higher perfection than in moft places. A rruut nccafionally ftrays out of the Eamont into the lakc, and vice verfa, out of the lake into the river. They are eafly diftinguifhed by their foots; and it is obferved, that a fift taken from its ufual place is not in fo good a condition as one of equal length taken on its own ground; leence it is probable, that they do not emigrate, except when difeafed or fawning. Geld fifh (thofe without fawn) are the firmeft and beft. They have been taken out of a folid piece of ice, in which they were frozen, as it were in a cafe, perfectly uninjured, after an imprifonment of feveral hours."
4. The fpecies, called from its col ur the white, migrates out of the fea into the river Efk in Cumberland, from July to September. When drelied, their flefh is red, and mof delicious eating. They have, on their fire appearance from the falt-water, the lernoe fulmonea, or falmon loure adhering to them. They have both milt and Spawn; but no fry has as yet been oblerved. This is the fifh called by the Scots phimocs. They never excced a foot in length. The upper jaw is a little longer than the lower; in the firt are two rows of teeth, in the laft one: on the tongue arefix tecth. The back is ftraight: the whole body of an elegant form ; the lateral line is ftraight; colour, between that and the top of the back, duky and filvory intermixed; beneath the line, of an erquilite whitenef: firlt dorfal fin potted with black : tail black, and mach forked.
5. The famlet is the leaft of the trout kind; is frequent in the Wye, in the upper part of the Severn, and the rivers that run into it, in the north of England, ans! in Wates. It is by feveral imagined to be the fry of the falmon; but Mr Pennant diflents from that opinion. Sce his limt. Zool. IlI. 303.

This pecies has a general refemblance to the tront, therefore muft be deferibed comparatively. \(1 / 7\). The head is proportionably narrower, and the mouth lefs than that of the irout. 2dlj. Their body is deeper. 3.d.\%. They feldom exced fix or feven inches in length; at molt, eight and a half. thhy. The pecteral fins have

5enerall:
4) !ixn.
a lingle froall one attends it; whe:cas the pectoral fins of the tront are nore numeroully marl:ed. 5tbly, The fourious of fat fin oin the back is never tipped with red; nor is the edge of the anal tin white. Cothly, The fpots on the body are fewer, and not fo uright: It is alfo nuarked from the back to the fides with fix or feven large bluifh bars; but this is not a certain charatter, as the fame is fonctimes found in young trouts. 7thly, The tiil of the fumlet is much more forked than that of the trout. Thefe fifhare very frequent in the rivers of Scotland, where they are called pars. They are alfo common in the Wye, where they are known by the name of fkir. lings, or lafprings.
G. The alpinus, or red charr (umbla minor, or cafe charr of Pennant), is an inhabitant of the lakes of the north, and of thore of the mountainous parts of Ellrope. It affefts clear and pure waters, and is very rarely known to wander into runaing treams, except into fuch whofe bottom is fimilar to the neighbouring lake. It is found in valt abundance in the cold lakes on the fiummits of the Lapland Alps, and is almof the only lifh that is met with in any plenty in thofe regions; where it would be wonderful how they finbfifted, had not Providence fupplied them with innumerable larvx of the gnat kind: thefe are food to the fith, who in their turn are a fupport to the migratory Laplandeis, in their fummer-voyages to the diftant lake. In finch excurfions thofe vacant people find a luxurious and ready repait in thefe fith, which they drefs and eat without the addition of fauces; for exercife and temperance render ufelefs the inventions of epicurifm. There are but few lakes in Great Britain that produce this fifh; and even thofe not in any abundance. It is found in Ullfwater and Windermere in Weftonoreland; in Llyn Quellyn, near the fout of Snowdon; and, before the difcovery of the copper mines, in thofe of Llynberris; but the mineral ftreams have entirely deftroyed the fifh in the laft lakes. In sootland it is found in Loch Inch, and other neighbouring lakes, and is faid to go into the Spey to ipawn.
" The largeft and moft beautiful we ever received (fays Mr Pennant) were taken in Windermere, and wore communicated by the Rev Mr Farifh of Carline, with an account of their natural hiftory. He fent five fpecinuens; two under the name of the cafe cbarr, male and semale; another he called the geld charr, i. e. a charr which had not fpawned the preceding feafon, and on that account is reckoned to be in the greatelt pertection. The two others were inferibed, the red charr, the floer or gild charo, the carpia lacus benaci, Ran Syn. Pifc. 66. which latt are in Weltmoreland dittinguithed by the epithet red, by reafon of the fleth afluming a higher colour than the other when drefled.
" The umblia minor, or cafe charr, fpawns about Aliclaelmas, and cliefly in the river Brathy, which uniting with another called the Rowihay, about a quarter of a mile above the lake, they buth fall into it together. The Brathy has a black rocky bottom; the bottom of the Rowthay is a bright fand, and into this the charr are never obferved to enter. Some of them, however, fpawn in the lake; but always in fuch parts of it which are Itony, and refemble the channel of the Erathy. They are fuppofed to be in the highelt per-
fection about May, and continue fo all the funmer ; yet are rarely caught after April. Whan they are fparning in the river they will take a bait, but at no other time; being commonly taken, as well as the other fpecies, in what they call breaft-nets, which are in length about \(2+\) fathoms, and about five where broadef.- The feafon which the other fpecies fpawn in is from the beginning of January to the end of March. They are never known to afcend the rivers, but always in thofe parts of the lake which are fpringy, where the bottom is fmooth and fandy, and the water warmeft. The fithermen judge of this warmth, by obferving that the water feldom freezes in the places where they fpawn except in intenfe frofts, and then the ice is thinner than in other parts of the lake. They are taken in greatert plenty from the end of Septennber to the end of November ; at other times they are hardly to be met with. This fjeecies is much more efteemed for the table than the other, and is very delicate when potted. The length of the red charr to the divifion in its tail was 12 inches; its biggeft circumference almoit 7 . The firft dorfal fin was five inches and three-quarters from the tip of its nofe, and conlifted of 12 branched rays, the firlt of which was thort, the fifth the longeft; the fat fin was very fmall. Each of the five filh had domble noftrils, and fmall teeth in the jaws, roof of the mouth, and on the tongue.-The jaws of the cafe charr are perfectly even ; on the contrary, thofe of the red charr were unequal, the upper jaw being the broadeft, and the teeth hung over the lower, as might be perceived on pafling the finger over them.- The geld or barren charr was rather more flender than the others, as being without fpawn. The back was of a glolly dufky blue; the fides filvery, mixed with blue, fpotted with pale red; the fides of the belly were of a pale red, the bottom white. The tails of each bifurcated."
7. The thymallus, or grayling, haunts clear and rapid ftreams, and particularly thofe that flow through mountainous countries. It is found in the rivers of Derbyfhire ; in fome of thofe of the north; in the Tame near Ludlow ; in the Lug, and other itreams near Leominfter; and in the river wear Chriftchurch, Hampthire. It is alfo very common in Lapland : the inhabitants make ule of the guts of this fith inftead of rennet, to make the cheere which they get from the milk of the rein-deer. It is a voraciousfifh, rifes freely to the fly, and will very eagerly take a bait. It is a very fwift fwimmer, and difappears like the tranfient paffage of a hadow, from whence we believe it derived the name of umbra.

\section*{Effugienfque oculos celeri levis umbra nalatu. Aufon.}

The umbra fwitt efcapes the quickelt eye.
Thymalus and thymus are names beftowed on it on account of the imaginary feent, compared by fome to that of thyme; but we never could perceive any particular fmell. It is a filh of an elegant form ; lefs deep than that of a trout : the largelt we ever heard of was taken near Ludlow, which was about half a yard long, and weighed four pounds fix ounces; but this was a very rare inftance. The irides are filvery, tinged with yellow: the teeth very minute, feated in the jaws and the roof of the mouth, but none on the tongue : the head is duky ; the covers of the gills of a glofly green: the back and fides of a fine filvery grey ; but when the fifh is juft

Salne:n. taken, varied nightly with blue and gold; the fide-line \(\underbrace{\sim}\) is fraight: the icales are large, and the lower edges dulky, forming ftraight rows from heid to tail: the tail is much furked.
8. The eper'anus, of fimelt, inhabits the feas of the northern parts of E.urope, and probably never is found as far fouth as the Mediterrancan: the Seine is une of the Feench rivers which receive it; but whether it is found fouth of that, we have not at prefent authority to fay. If we can depend on the obfervations of navigators, who generally have too much to think o.f to attend to the minutix of matural hiltory, thefe fifh are taken in the Straits of Magcllan, and of a moft furprifing fize, fome meafuring 20 inches in length and 8 in circumference. They inhabit the feas that wath thefe iflands the whole year, and never go very remote from flore except when they afcend the rivers. It is remarked in certain rivers, that they appear a long time before they fpawn, being taken in great abundance in November, December, and January, in the Thames and Dee, but in others not till February; and in March and April they Spawn; after which they all return to the falt water, and are not feen in the rivers till the next feafon. It has been obferved that they never go into the Merfey as long as there is any fnow-water in the river. Thefe fifh vary greatIS in fize; but the largen we ever heard of was 13 inches long, and weighed half a pound. They have a very particular foent, from whence is derived one of their Englifh names, fmelt, i. e. fmell it. That of Sparling, which is ufed in Wale, and the north of England, is taken from the French fperlan. There is is wonderful difagreement in the opinion of people in refpect to the icent of this fifh: fome affert it flavours of the violet; the Germans, for a very different teafon, diftinguifh it by the elegant title of finkffch.Smelts are often fold in the ltreets of London fplit and dried. They are called dried Jparlings; and are recommended as a relifh to a glafs of wine in the morn. ing. It is a fifh of a very beautiful form and colour ; the head is tranfparent, and the \(\mathfrak{K k i n}\) in general fo thin, that with a good microfcope the blood may be obferved to circulate. The irides are filvery; the pupil of a full black; the under jaw is the longeft, in the front of the upper jaw are four large teeth ; thofe in the fides of both are fmall; in the roof of the mouth are two rows of teeth; on the congue two others of large teeth. The fales are fmall, and readily drop off: the tail confits of 19 rays, and is forked. The colnur of the back is whitifh, with a caft of green, beneath which it is varied with blue, and then fucceeds a beautiful glofs of a filvery hue.
9. The lavaretus, or gwiniad, is an intabitant of feveral of the lakes of the Alpine parts of Europe. It is found in thofe of Switzerland, Savoy, and Italy; of Norway, Sweden, Lapland, and Scotland; in thofe of Irclind, and of Cumberland; and in Wales, in that of Llyntegid, near Bala, in Merionethfhire. It is the fame with the ferra of the lake of Geneva; the fchelly of Hulfe-water ; the pollen of Lough Nearh ; and the vangis and juvengis of Loch Mabon. In Scotland, there is a tradition that it was firf introduced there by: their beanteous but unfortunate queen, Mary Stuart; and as in her time the Scotch court was much Frenchified, it feems likely that the name was derived from the

Vob. XVJ.

French rendife, a "dace;" to which a fighte obferver might be tenpted to compare it from the whitenefs of its icales. The ! ritilh name grvinial, or whiting, was beltuwed upon it for the fame reafon. It is a gregarious finh, and appoaches the thores in safi fluals in fpring and in fummer; which proves in many places a bleffed relief to the poor of inland counties, in the fame degree as the annual return of the herring is to thole Who inhabit the coafts. Between 7000 and 8000 have been taken at one draught. The \(g\) winiad is a fifh of an infipid t:itte, and mult be eaten foon, for it will not keep long; thofe that choofe to preierve them do it with falt. They die very foon after they are taken. Their fowning fearon in Llyntegid is in December. The largett gwiniad we ever heard of weighed between three and fu, ur pounds: the head is fmall, fmooth, and of a dulky hue: the eyes very large; the pupil of a deep blue: the nofe blunt at the end; the jaws of equal length : the mouth fmall and toothlefs: the branchioftegous rays mine : the covers of the gills filvery, powdered with black. The back is a little arched, and flightly carinated: the colour, as far as the lateral line, is glofied with deep blue and purple; but towards the lines affumes a lilvery cafl, tinged with gold; beneath which thofe colours entirely provail. The tail is very much forked: the fcales are large, and adhere clofely to the body.
SALMON, in ichthyology. See \(S_{A L M O}\) n \(^{\circ}{ }_{1}\).
Salmon-Fikery. See Salmon-Fishert.
SALON, or SALOON, in architecture, a lofty, \{pacious fort of hall, vaulted at top, and ufually comprehending two fories, with two ranges of windows.

The falon is a grand room in the middle of a build. ing, or at the head of a gallery, \&cc. Its faces, of fides, are all to have a fymmetry with each other; and as it ufually takes up the height of two fories, its ceiling, Daviler obferves, fhould be with a moderate fweep.

The falon is a fate-room much ufed in the palaces in Italy; and from thence the mode came to us. Ambalfidors, and other great vifitors, are ufually reccived in the falon.

It is fometimes built fquare, fometimes round or oval, fometimes oetagonal, as at Marly, and fometimes in other forms.

SALONA, a fea-port town of Dalmatia, feated on a bay of the gulph of Venice. It was formerly a very confiderable place, and its ruins thow that it was 10 miles in circumference. It is 18 miles north of Spalatto, and fubject to Venice. It is now a wretched Fortis's village, preferving few dillinguifhable remains of its an- Travels in cient iplendor. Doubtlefs the two laft ages have de- to Dalmaftroyed all that had efcaped the barbarity of the north. \({ }^{i} 3_{3}\), ern nations that demolifhed it. In a valuable MS. relation of Dalmatia, written by the fenator Giambattita Guiliniani, about the middle of the 1 Gth century, there is a hint of what exifted at that time. "The nobility, grandeur, and magnificence of the city of Salona, may be imagined from the vaults and arches of the wonderful theatre, which are feen at this day; from the vaft fones of the fineft marble, which lies feattered on, and buried in the fields; from the beautiful column of three pieces of marble, which is fill ftanding in the place where they fay the arfenal was, torards the fea. fhore; and from the many arches of furprifing beaut),

\section*{SAL}

Salunichi fupported by vers high marble columns; the height of the arches is a fone-throw, and above them there was an aqueduc, which reached from Salona to Spalatro. There are to be feen many ruins and veftiges of large palaces, and many ancient epitaphs may be read on fine marble flones; but the earth, which is increafed, has buried the moft ancient flones, and the mof valuable things." E. Long. 17.29. N. Lat. 44. 10.

SALONICHI, formerly called Thifilonica, a feaport town of Turkey in Europe, and capital of Macedonia, with an archbifhop's fee. It is anciont, large, populous, and rich, being about 10 miles in circumference. It is a place of great trade, carried on principally by the Greek Chrillians and Jews, the former of which have 30 churches, and the latter as many fynagogues; the Turks alfo have a few mofques. It is furrounded with walls, flanked with towers, and defended on the land fide by a citadel, and near the harbour with three forts. It was taken from the Venetians by the Turks in 1431. The principal merchandize is filk. It is feated at the bottom of a gulph of the fame name, partly on the top, and partly on the fide of a hill, near the river Vardar. E. Long. 23. 13. N. Lat. 40. 41 .

SALSES, a very ftrong caftle of France, in Rouffillon, on the confines of Languedoc. It was taken from the Spaniards by the French in 1642 ; and is feated on a lake of the fame name, among mountains, 10 milles north of Perignan. E. Long. 3. o. N. Lat. 43. 35 .

SALSETTE, an ifland of the Eaft Indies, adjacent to Bombay, from which it is in one place divided only by a narrow pafs fordable at low water. It is about 26 miles long, and eight or nine broad. The foil is rich, and by proper cultivation capable of producing any thing that will grow in tropical climates. It is every where well watered, and when in the poffefion of the Portuguefe furnifhed fuch quantities of rice, that it was called the Granary of Goa. It abounds alfo in all kinds of provifions, and has great plenty of game, both of the four-footed and feathered kind. It has pretty high mountains; and there is a tradition that the whole was thrown up from the bottom of the fea: in confirmation of which it is faid, that on the top of the higheft hill there was found, fome years ago, a fone anchor, fuch as was anciently ufed by the inhabitants of that country. Here we meet with the ruins of a place called Canara, where there are excavations of rocks, fuppofed to be contemporary with thofe of Elephanta. They are much more numerous, but not comparable to the former either in bignefs or workmanhluip.

The inland of Salfette lately formed part of the Portuguefe duminions in India. It ought to have been ceded to the Englifh along with Bombay, as part of the dower of Catharine of Lifbon, efpeufed to Charles II. The fulfiment of this article, however, being evaded, the ifland remained in poffeffion of the Portugnefe; and notuithifanding the little care they took of it, the revenue of it was valued at 60,0001 . Such was the negligence of the lortugufe government, that they took no care to furtify it againf the attacks of the Marattas, from whofe dominions Sallette was only feparated by a very narrow pafs fordable at low water. Here they had only a miferable redoubt of no conlequence, till, on the ajpearance of an approaching
war with the Marattas, they began to build another, which indeed would have anfwered the purpofe of proteding the ifland, provided the Marattas had allowed them to finifh it. This, however, was not their intention. They allowed them indeed to go quietly on with their works, till they faw them almof completed, when they came and took poffeffion of them. The Marattas thus became dangerous neighbours to the Englifh ac Bombay, until it was ceded to the latter by the treaty concluded with thefe people in 1780 . E. Long. 72.15 . N. Lat. 19. 0.

SALSOLA, Glass-wort : A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 12 th order, Holoracie. The calyx is pentaphyllous; there is no corolla; the capfule is monofpermous, with a fcrewed feed.
The fpecies are, I. The kali, which grows naturall \({ }_{5}\) in the falt marfhes in divers parts of England: It is an annual plant, which rifes above five or fix inches high, fending out many fide branches, which fpread on every fide, garnifhed with fhort awl-hhaped leaves; which are flelhy, and terminate in acute fpines. The
flowers are produced from the fide of the branches, to which are flelhy, and terminate in acute fpines. The
flowers are produced from the fide of the branches, to which they fit clofe, and are encompaffed by fhort
prickly leaves; they are fmall, and of an herbaceous which they lit clofe, and are encompaffed by fhort
prickly leaves; they are fmall, and of an herbaceous colour. The feeds are wrapped up in the empalement of the fower, and ripen in autumn; foon after which the plant decays. 2. The tragus grows naturally on the fandy fhores of the fouth of France, Spain, and Italy. This is alfo an annual plant, which fends out many diffufed ftalks, garnifhed with linear leaves an inch
long, ending with fharp fpines. The flowers come out diffufed ftalks, garnifhed with linear leaves an inch
long, ending with fharp fpines. The flowers come out from the fide of the ftalks in the fame manner as thofe from the tide of the italks in the fame manner as thole
of the former ; their empalements are blunt, and not fo clofely encompaffed with leaves as thofe of the other. 3. The foda, rifes with hertaceous ftalks near three feet high, fpreading wide. The leaves on the principal ftalk, and thofe on the lower part of the branches, are long, flender, and have no fpines; thofe on the upper part of the Falk and branches are flender, fhort, and crooked. At the bafe of the leaves are produced and crooked. At the bafe of the leaves are produced
the flowers, which are fmall, and hardly perceptible ; the empalenient of the flower afterwards encompaffes
the capfule, which contains one cochleated feed. 4 . the capfule, which contains one cochleated feed. 4. The vermiculata grows naturally in Spain. This hath flrubly peremial Atalks, which rife three or four feet
high, fending out many fide-branches, garnilhed with hlabuby peremial Aalks, which rife three or four feet flefhy, oval, acute-pointed leaves, coming out in clufters
from the fide of the branches; they are hoary, and have fefhy, oval, acute-pointed leaves, coming out in clutters
from the fide of the branches; they are hoary, and have fiff prickles. The flowers are produced from between
the leaves toward the ends of the branches; they are fo fiff prickles. The flowers are produced from between
the leaves toward the ends of the branches; they are fo fmall as farce to be difcerned, unlefs they are clofely viewed. The feeds are like thofe of the othcr kinds. 5 . The rofacea grows naturally in Tartary. This is an anThe rofacea grows naturally in Tartary. This is an annoore than five or fix inches high. The leaves are awlnore than five or fix inches high. The leaves are awl-
flaped, ending in acute points; the empalements of the flowers fpread open: the flowers are fmall, and of a rofe
colour, but fuon fade : the fecds are like thofe of the flowers fpread open: the flowers are fmall, and of a rofe
colour, but fuon fade : the fecds are like thofe of the other forts.

All the forts of glafs-wort are fometimes promifcu-
oufly ufed for making the fal kali, but it is the third fort which is efteemed beft for this purpofe. The man-
ner of making it is as fallows: Hiwing dug a trench fort which is efteemed beft for this purpofe. The man-
ner of making it is as follows: Having dug a trench viewed. The feeds are like thofe of the other kinds. 5.都

 near the fea, they place laths acrofs it, on which they lay the herb in heaps, and, having made a fire below, the liquor, which runs ont of the herbs, drops to the bottom, which at length thickening, becomes fal kali, which is partly of a black, and partly of an alll-colour, very tharp and corrofive, and of a faltill tutte. This, when thoroughly hardened, becomes like a fone; and in that itate is traniported to different countrics for miking of glafs.

SALT, one of the great divifions of natural bodies, but which has never yet been accurately defined. The characteriftic marks of falt have ufually been reckoned its power of affesting the organs of tatte, and being foluble in water. But this will not diftinguifh falt from quicklime, which afro affects the fenfe of rufte, and diffolves in water; yet quicklime has been univerfally reckoned an earth, and not a filt. The only diftinguifhing property of falts, therefore, is their cryitallipation in water: however, this does not belong to all falts; for the nitrous and marine acids, though allowed on all hands to be falts, are yet incapable of cryftallization, at leaft by any method hitherto known. Several of the imperfect neutral falts alfo, fuch as combinations of the nitrous, muriatic, and vegetable acids, with fome kinds of earths, cryftallize with very great difficulty. However, by the addition of fpirit of wine, or fome other fubfances which abforb part of the water, kecping the liquor in a warm place, scc. all of them may be reduced to cryftals of one kind or other. Salt, therefore, may be defined a fubtance affecting the organs of tafte, foluble in water, and capable of cryftallitation, either by itfelf or in conjunction with fome other body; and, univerfally, every falt capable of being reduced into a folid form, is alfo capable of cryftallization fer fe. 'Thus the clafs of faline bodies will be fufficiently diftinguifhed from all others: for quicklime, though foluble in water, cannot be eryftallized without addition either of fixed air or fome other acid; yet is is moft commonly found in a folid ftate. The precious ftones, bafaltes, \&ce. though fuppofed to be formed by eryftallization, are neverthelefs diftinguified from falts by their inlipidity and infolubility in water.

But acids and alkalis, and combinations of both, when in a concrete form, are falts, and of the pureff fort. Hence we conclude, that the bodies, to which the name of jalts more properly belongs, are the concretions of thofe fubftances; which are accordingly called acid falls, alkaline fults, and neutral falts. Thefe laft are combinations of acid and alkaline falts, in fuch proportion as to render the compounds neither four nor alkaline to the tafte. This proportionate combination is called fataration: thus the common kitchen-falt is a neutral falt, compofed of marine acid and minesal alkali combined together th the point of fatmration. The appellation of neutral falts is alfo extended to denote all thofe combinations of acids, and any other fubfance with which they can mite, fo as to lofe, wholly or in great meafure, their acid properties.

But although this general definition of falts is commonly received, yet there are many uriters, efpecially mineralogitts, who ennfine the denomination of fults in the manner we firf mentioned, vi\%. to thefe fubltances only which, befides the general properties of falts, have the power of crytallizing, that is, of arranging their particles fo as to form regularly-lhaped bodies, called rryfals, when the water fuperfluous to their concrete exiftence has been cvaporated.

The ancient chemifts afferted that falt was one of Si't. the coxnponent principles of metals, and indeed of every thing elfe: a doetrine which was attempted to be revised by the late Dr Price of Guildford, who thought it probable that the bafis of all impertect metals is faline, becaufe Mr Scheele had lately extracted a rcal acid from arlenic, which, by the addition of a proper quantity of phlogifton, becomes at femimetal. But here the argument will hold only with regard to the femimetali, all of which are volatile in the fire, and therefore may poflibly have a volatile bafis, fuch as all acids are in fume degree: but forme of the imperfect metals, as tin and copper, may be reduced to a cals: equally refratory with qquicklime itfelf; and even zinc, though volatile in clofe veffels, is yet capable of being reduced to an exceedingly refractory cals called fowers of zinc; and it is to be obferved, that the regulus of arfenic, tven in its moft perfect metalline form, cannot be calcined like other metals. The common opinion that metals have an earihy, rather than a faline bafis, ficems to be well founded.
The origin of falts is very much, or rather totally, unknown. Some eminent chemilts, particularly Stahl, have fuppofed that the number of fubftances truly and elientially faline is very fmall; nay, that there is but one faline principle in nature. This principle they fuppofe to be the vitriolic acid, as being the molt fimple and indeftruatible of them all. Stahl delivers his opinion on this fubject in the following words: "That he confiders the vitriolic acid as the only fubflance effentially faline; as the only faline principle which, by uniting more or lefs intimately with other fubftances that are not faline, is capable of forming an innumerable multitude of other faline matter, which nature and art fhew us; and, fecondly, that this faline principle is a fecondary principle, compofed only by the intimate union of two primary principles, water and earth.

In fupport of this theory Mr Macquer argues in the following manner: "Every true chemift will eafily" difcover that this grand idea is capable of comprehending by its generaliy, and of connecting toge:her, all the phenomena exhibited by faline fubftaices. But we mult at the fame time acknowledge, that when we examine the proofs upon which it is founded, although it has a great appearance of truth by its confiftency with the principles of chemiftry, and with many phenomena, yet it is not fupported by a fufficient number of facts and experiments to afcertain its truch. We might here examine what degree of probability ought to be granted to this theory of tales; but this could not be properly accomplifhed, without entering into long details, and penctrating into the depths of chemiftry. We are therefore obliged to relate only what is moft effertial to be known concerning this grand hypothefis. We may perceive at once, that the former of thofe propofitions, upon which is founded the theory which we meritioned, camnt be demonftrated, unlefs it be previoufly proved that every faline matter, excepting pure vitriolic acid, is nothing but this fame acid diferently modified, the piimary properties of which are more or leis altered or difguifed by the uninn contracted with other fubfances. But we confers, that chemifts are not capable of proving decifively this opinion; which, however, will appear very probable from the following rellections.
"Firft, of all faline matters known, none is fo ftrong,

\section*{SAL \\ 620 J}

Salt. fo undterable, fo eminently pofieffed of faline propertics, as vituillic acid."
'I'he vitriolic acid, when combined with other fubfances, forms vitriolic falts, which vary both in feecific names and properties according to the various fubttances with which the acid is combined. 'Thus the vitriolic acid, combined with mineral alkali, forms the falt called Glauber's falt, or fal mirabile. When it is combined with calcareous earths, it forms vitriolic falts with bales of calcareous earth, which are commonly called felenits. When combined with argillaceous earths, it forms alum. When combined with metals, it forms vitriolic falts with metallic bafes, to which the general name vitriols is given; and in commerce are commonly called copperas. The vitriols principally ufed are, I. The martial vitriol; called alfo Englif vitriol, sren ritriol, or green copperas, which is a combination of vitriolic acid with iron. 2. The vitriol of copper, called alfo llue vitriol, Cyprian viiriol, or blue copperas; which is a combination of vitriolic acid and copper. 3. The vitriol of zinc, called alfo aubite copperas, and Goflar vitriol, which is a combination of the fame acid with a fernimetal called zinc. It is a property peculiar to the vitriolic acid, that all the combinations of it, with thofe fubfances with which it can form neutral falts, are fufceptible of chryfallization.
"Secondly, Amongit the other faline fubltances, thofe which appear moft active and mott fimple, as nitrous and marine acids, are at the fame time thofe whofe properties moft refemble the properties of vitriolic acid."
The nitrous acid, combined with all the fubfances with which it can mix, forms faline fubttances, in general called nitrous falts; f fecifying each particular falt by the name of the fubfance united to the acid. Thus nitrous acid, with fixed vegetable alkali, forms a faline fubftance called nitre, or jall petre. With mineral alkali, forms cubic or quadrangular nitre. When mixed with metallic fubflances, forms metallic nitres, which are fpecified nitre of gold; nitre of filver, or lunar nitre, Iurar cryyfals, and cryfals of filver, nitrous cryfals of mercury; nitre of copper, icc.
"'Thirdly, We may give to vitriolic acid many of the charaterific properties of nitrous acid, by combining it in a certan manner with the inflammable principle, as we fee in the relatile fulphureous acid; and cven, according to an experinient of Mr Piech, related in a memoir concerning the origin of nitre, which grained the prize of the academy of Berlin, vitriolic acid, mixed with vegctable and animal matters fufceptible of fermentation, is really transformed into a nitw us acid by the putrefation of thete matters. See Curmistry, no 720 .
"Fourthly, The marine acid, although its principles are lefs known than thofe of the nitrous acid, may he approximated to the character of vitriolic and nitrous acids by certain methods. This acid, after it has been treated with tin and ether metallic matters, is capable of forning cther with fipitit of wine, as vitriolic acid does, which it cannot do in its natural feate; and when iron is dififlued in it, it fecms to be approximated to the nuture of nitious acid. Reciprocally
the approximation of vitriolic acid to the characler of marine acid feems not impoflible. Having once diftil. led very pure vitriolic acid upon a confiderable quantity of white arlenic, I was fruck with a Itrong fmell like that of marine acid, which was not either that of arfenic or of vitriolic acid; for this has no fmell when it is pure."

The marine acid, combined with various matters, forms marine falts, or fimply falts, fpecified by the names of their particular bafes. The fea-falt or kitchen falt, and fal gem, are combinations of marine acid and mineral alkali. When this acid is combined with volatile alkali, it forms fal ammoniac (A.) With metals it forms metallic falts, called foll of gold, falt of copper, Eec. according to the various metals combined with the acid. The falt of filver is alfo called luns cornea; the falt of lead is often called plumbum cornoum; and the falts of antimony, and of arfenic, are known by the names of butter of antimony, and butter of arfenic.
"Fifthly, Oily vegetable acids become fo much fronger, and more fimilar to vitriolic acid, as they are more perfestly deprived of their oily principle, by combining them with alkalis, earths, or metals: and afterwards by feparating them from thefe fubltances by diftillation, and efpecially by frequently repeating thefe operations. They might perhaps be reduced to a pure vitriolic acid, by continuing lufficiently this method: and reciprocally, vitri lic and nitrous acids, weakened by water, and treated with much oily matters, or fill better with fprit of wine, acquire the characters of vegetable acids. We may fee a remarkable inltance of this in Mr Pott's differtation De aido nitri vinofo. [The mof remarkahle experiment in which is related under the article \(\mathrm{C}_{\text {hemistry, }} \mathrm{n}^{\circ} 78 \mathrm{t}\).]
* Sixthly, the properties of fixed alkalis feem to be very different from thofe of acids in general, and confequently of vitriolic acid. Yet if we confider that a large quantity of earth enters their compofition; that much of it may be feparated by repeated folutions and calcinations; and alfo, that by depriving thefe faline fubftances of their earthy principles, they become leis fixed, more deliquefcent, and, in a word, more fimilar to vitriolic acid in this refpect;-we fhall. not think it improbable, that fixed alkalis owe their faline properties to a faline principle, of the nature of vitriolic acid, but much difguifed by the quantity of earth, and probably of inflammable principle, to which it is united in thefe combinations. The properties of volatile alkalis, and the transformation of fixed alkali, or of its materials, into volatile alkali in putrefaction, and in feveral dillillations, feem to how fufficiently that they are matters effentially faline, as fixed alkalis are, and that their volatility which diftinguithes them proceeds from their containing a lefs quantity of earth, but more attenuated, and a portion of very fuhtile and volatile oil, which enters their compolition. [For fome other particulars relating to the tranfmutation of fils, [ee Chemistry, \(n^{0} 784\).]
" Beficles thefe principal facts, there are many others, too numerons to be even fightly mentioned here; they may be found fattered in the works of chemifts, particularly of Stahl. But jerfons who would collect and compare all the experiments relating to this
fubject,
(A) Ammoniacal falts is alfo a gencral name given to all neutral falcs coompofed of an acid faturated with a volatile alkali.
fubjest, ought to l.now, that many of them are not fufficiently afcertained; and that perhaps a greater number of them have not been fufficiently prolecuted, and are, propitly fpeaking, only begun. We mutt even acknowledge, that matis of thole experiments which we have mentioned, have not been fufficiently profecuted.
"The fecond fundamental propofition of the theory of falts, namely, "That the vitrioic acid is compounded of only the aquenus and earthy principles; is, like the Girt, lupported by many fats which give it a degree of probability, but which do not amount to a complete demonilration. This propofition may be fupported by the following confiderations.
" Firlt, Experience conflantly thews, that the properties of cempound bodies are always the refult of thofe of the corrponent parts of thefe bodies, or rather they are the properties of thefe component bodies modified by one an ther.
"Thus, if a body be compofed of two principles, one of which is fixed, and the other volatile, it will have a lefs degree of fisity than the former, and a lefs volatility than the latter. If it be compofed of two prin. ciples, one of which is fpecifically heavier than the other, its fpecific gravity will be greater than that of one of them and lefs than that of the other. The fame obfervation is applicable to all the other eflential properties, excepting thote which deftroy each other; as, for intlance the tendency to combinalion, or the diffulving power; for thefe latter p:operties are weakened fo much more in the compounds as their principles are more ftrongly united, and in more juft proportion.
*We obferve, neverthelefs, that the properties of compound bodies are not always exactly intermediate betwixt the properties of the component budies; for, to produce this mesm, the quantities of each of the component parts mult he equal, which is the cafe in few or no compounds.
"Befides, fome particular circumftances in the manner in which the principles unite with one another, contribute more or lefs to alter the refult of the combined propesties: for inflance, experience fhews, that when feve:al bodies, particularly metale, are united together, the fpecific gravities of which are well known, the allay formed by fuch union has not the precife fpecific gravity which ought to refule from the proportion of the allayed fubfances; but that in fome alldys it is greater and in others lefs. But we are certail, on the other fide, that thele differences are tor inconfiderable to prevent our diftingulhing the properties of the principles in the compounds which they furm, efpecially when they have very differelt propertics.
"Thefe things being premifed, when we examine well the properties of vitriolic acid, we thall edily find that they partake of the properties of the aqueous and of the earthy principles.
"Firlt, When the acid is as pure as we can have it, \(t\) is like the pure:t water and the putelt vitrifiable earihs, free from colour or fincll, and peslectly tratuparent.
"Sccondly, Although we cannot deprive the vitriolic aciu of all the water fuperabundant to its falme ellence, and therefore its precile fpecific gravity has not been determined, we know that when it is well
concentrated, it is more than twice as leavy as pure water, and much lel's heavy than any earthy fubftance.
"Thitdly, This acid is much lefs fixed thon an pure earth, fince, however well it may be concen. trated, it may always be en:irly ditnlled; for which purpotic a much Itronger degree of heat is requifite than for the diftllation of pure water.
"Fourthly, We do not know the degree of folidity of vilriolic actd, or the adhetion of aggregation, which its integrant parts have one to another, becaure for this purpote the vitriolic acid ought to be deprived of all liuperabundant water: but if we judge of it by the folid confiltence of this acid when highly concentrated, as we fee from the vitriolic acid called glacia.', the integrant parts of this acid feem fufceptible of a much llronger adhefion than thole of pure water; but much lefs than thofe of earth, as we fee from the inflance of hard Ilones.
"Filchly, The union which this acid contracts with water and with earths, bows that thele fubfances enter into its compolition; for we know, that in general cumpounds are difpufed to unite luperabundantly with the principles which compofe them. All thefe properties of vitriolic acid, which fo ienfibly partake, and much more than any uther acid, of the properties of earth and of water, are fulficient to induce us to believe that it is compoled of thele two principles; but it has one very emment property, which is common with it to neither water nor pure earth, which is, its violent and corrulnve talle. This property is fufficient to raife doubts, it we could not explain it from principles, which leem certain and general, reldting to the combination of bodi:s.
"We oblirve, then, concerning the property now in queilion, that is, of tatte in general, that it can only be conlidered as an irritation made upon the organs of talte by lapid bodies; and if we refiect attentively upon It, we thall be convinced, that no fubitance that is not impreffed by fome impulfe can irritate or agitate our ientible organs, but by a peculiar force of 1 ts integrant parts, or by their tendency to combination; that is, by their dillolving power. According to this nution, the talte of bodies, or the impreffion made upon cur jentible organs by their tendency to combisation, or by their diffolving power, are the fame property; and we fee accurdingly, that every folvent has a tafte, which is fo much mose flrong as its difolving power is greater; that thofe whole tafte is fo violert that it amounts to acsimony, corrofion, and caullicity, when applied to any other of the fenfible parts of our body belides the organs of talte, exite in them itch.ng and pain.
"This being premiled, the queftion is, How carth, in which we perceive no talte not dillolving power, and water, which has but a very reak difilving power, and little or no tatte, thould form by their combination a Jubftance, fuch as the vitriolic acal 1 s, powelfully corrolive and folvent?
" 'To concerve this, let us confider, firn, that every part of matter has a power by which it combines, or tends to conbine, with other parts \(f\) matter. Second. ly, that this torce, the effects of whach a e perceptible, iul chemical operations, only among the very fmall molecules, or the integrant and conti.sent parts of bodics, feems proportionable to the doslity or jpeciuf gravity of thete part:. Tluirdly, that tims lame force is limited

\section*{SAL}

Sait. in every integ:ant molecuic of matter: that if we confider this firce as not fatisfied, and confequently as a fimple tendency to combination, it is the greatelt porfible in an integrant molecule of nater perfeally infulated, or attached to nothing; and is the imalleft poffible, or none, when it is fatisticd by its intimate combivation with other parts capable of exlaulting all its actien; its tendency being then chauged into adhefion.
"Hence we may inler, that the integrant parts of the earthy principle have eflentially, and like all the orler parts of matter, a force of tendency to union, or of cohefinn in union, according to their condition; that as this earthy principle has a much more conliderable denfity or feccific gravity than all other fimple bodies that we know, we may probably prefume that its primary integrant molecules have a more confiderable force of tendency to unien, in the fame proportion, than the integrant parts of other principles; that confeguently when they cohere together, and form an ag. gregate, their aggregation muit alfo be fironger and lirmer than that of any other body. Accordingly we fee, that the puref earthy fubllances, whofe parts are united and form maffes, fuch as, for inflance, the fones called vitrifable, are the hardelt bodics in nature. We are \(n o\) lefs certain, that as the tendency of the parts of matter to unite is fo much lefs evident as it is more exhaufled and fatisfied in the aggregation, the parts of the earthy principle being capable of exhauting mutually all their tendency to union, we may thence infer, that every fenfible mafs of pure earthy matter muft appear deprived of any diffolving power; of talte; in a word, of tendency to union from the firmnefs of its aggregation. But we may alfo infer, that when thefe promary integrant parts of the earthy principle are not united together in aggregation, then, refuming all the astivity and tendercy to union which are eifential to them, they mult be the ftrongeit and molt powerful of all folvents.
"Thefe being premifed, if we fuppofe again, with Stahl and the beft chemifts, that, in the combination of the faline principle or of vitriolic acid, the parts of the earthy principle are united, not with each other, as in the earthy aggregation, but with the primary parts of the aqueous principle, each to each, we may then eatily conceive, that the primary integrant parts of the water, having effentially much lefs tendency to combination than thofe of earth, the tendency of thefe latter to union will not be exhaufted, but fatisfied only partly, by their combination with the former; and that confequently a compound mult refult, the integrant parts of which will have a ftrong difilving power, as vitriolic acid is.
"We may fee from hence how much miftaken chemilts are, who, conlidering earth only in its aggregation, or rather not attending to this ftate, and not diftinguifhing it from that fate in which the parts of this fame earth are fo feparated from each other by the interpolition of another body, that they cannot touch or cohere together, have confidered the earthy principle as a fubtance without force or action, and have very improperly called that a paffive principle, which of all others is the llrongeft, molt active, and mont powerful.
"However this general theory of falts may conform with the moft important phenomena of chemirtry, we mult acknowledge, that it can only be propofed as a fyltematical opinion, till it be evidently demonftrated
by the decifive means employed in chemical demonfrations, namely, by decompolition and recompolition: thus, if we could reduce vitriolic acid to earth and wat ter, and make that acid by combining together thefe two principles, this theory would ceafe to be a fyftem, and would become a demonttrated truth. But we mult confefs, that this theory is lefs fupported by experiment than by argument, from the many difficulties that are inevitable in fuch enquiries. For on one fide, we know that the fimpler bodies are, t!e more difficult is their decompofition; and on the other fide, the ftronger the aggregation is, the greater is the difficulty of making it enter into a new combination. Thus, as vitriolic acid is very limple, lince it is a conspound of the firlt order, it ought ftrongly to refife decompolition; and as the aggregation ot pure eartl is the firmeft that we know, it cannot eafily be made to enter as a principle into a new combiration with water to form a faline matter. The following are the principal experiments which have been made relative to the fubjer.
"Firli, we feem to be certain, from many proofs, that all faline fubfances, comprehending thofe that contain vitriolic acid, as vitriolated tartar, Glauber's falt, and other vitriolated falts which are fufficiently fixed to fupport a perfef drying, or rather calcination, being alternatcly diflolved, dried, and calcined a number of times, are mose and more diminifhed in quantity, and that earth and water are feparated from them each operation. But alkaline falts appear to be fill more furceptible than any other faline matter of this kind of decompofition.
"Secondly, When nitre is burnt in clofe veffels, fo that we may retain not only all that remains fixed after this burning, but alfo what exhales in vapours, as in the experiment of the clyffus of nitre, we have a proof which feems decilive, that the mineral acid of this falt, which is not very far from the fimplicity of vitriolic acid, is totally decompofed and reduced into earth and water. For if we examine the fixed reliduum in the retort, we find that it is only the alkali that was contained in the nitre, charged with a fuperabundant earth, which is feparable from it by folution and filtration. And if the liquor in the receiver, formed by the vapours condenfed there, be examined, which ought to be nitrous acid; il this acid had not been deftroyed, we find, that, fo far from being acid, it is only pure water, fometimes even charged with a little fixed alkali, which had been railed by the force of the detonation. Thus nitrous acid is made to difappear in this experiment, and in its place we find only eartl and water.
" 'Thirdly, The phenomena of limettone, which by calcination and extination in water acquires faline properties that it liad not before its attenuation by fire and its combination with water; and alfo the experiment of Beccher, who afferts, that if a vitrifiable fone be alternately made red-hot, and extinguithed in water a number of times, it may be fo attennated that it fhall be like a faline gelatinous matter; thefe, I fay, thow that faline matters are actually formed by the intimate combination of the very attenuated parts of earth with thofe of water. We find in the witings of Bec. cher and Stahl, and particularly in the Specimen Beicherianum of the latter author, many other obfervations and experiments tending to prove the fame propofition; but we muft confefs, that none of the experiments we have mentioned, excepting that of the decompofition
\(\underbrace{\text { Salt. }}\) of nitrous acid by burning, are abfolutely decifive; principally becaufe they have not been fufficiently repeated or profecuted, nor carefully enough examined in all their circumflances."

On this theory it is obvious to remark, that our author has omitted to mention the moft ative part of the compofition of falts, namely elementary firc. Of this both acids and alkalis undoubtedly contain a great quantity in a very active fate, as is evident from their performing the effects of fire when applicd to certain lubflances; nay, from their aftually buriling into fame when mixed with fome kinds of oils. For an explanation of the reafon of which, fee Heat, and the varions detached articles relative to that fubject. Whatever doubts we may have ol the power of mere water rombined with mere earth to affect the organs of tatte, we can have none that the element of fire is capable of fo doing; and from the very talling of there fubfances, we may be affured, that whatever gives that peculiar fenfation to the tongue which we call acill or a'kaline, gives alfo the other properties of the falt, whatever they may be. In alkalis, no doubt the greatef part of the compolition is earth; but from what has been faid on Quicklime, it appears, that mere earth, by the artificial ation of fire alnne, acquires all the properties of falt, that of eryllallizing \(p: r \int_{c}\) excepted: it feems probable therefore, that, in the more perfect operations of nature, the fame materials are ufed; only the proportions are fuch, that the fubfance is more foluble, and its caufticity greater, than even quicklime itfelf. With regard to acids, the earthy parts feem to be fewer; and in all probability the mof confiderable ingredient in their compolition is water: but in what manner this element is united to that of fire fo as to produce the peculiar phenomena of acids, cannot be explained.

The acid of tartar (the puref part of which, or that faline fubftance which firft cryftallizes by evaporation in the reffels in which it is purified, is called cream of tartar), and alfo all other concrete vegetable acids analogous to it, when mixed with various other fubflances, form compounds, gencrally called tartarcous falts, or \(\int_{0}\). luble tartars, bec:aufe they are diffolved by water more eafily than the acid of tartar itfelf. Acetous falts, that is, all falts containing the acid of vinegar, are alfo combined with various bafes, and form faline fubftances of different names; the principal of which are, the acetous falt of copper, called erytals of Venus, or of verdigris by the chemitts, and diffilied or cryflallized nerdigris in commerce; the acetous falt of lead, commonly called falt or fugar of lead; and the acetous mercurial falts. Sugar is an effential regetable falt, of a pleafant fweet tatte, containing a vegetable acid combined with earth and oil.

Potalh is a fixed veget.able alkali, extracted from the afhes of wood. Concrete volatile alkalis arc generally called volatile falts; although this name is fometimes alfo given to the volatile falt of amber, which is not an alkaline but an acid falt. Borax is a neutral faline matter, whofe origin, whether animal or vegetable, is as yet unknown, its components being not fuficiently exa. mine.l. It is fuluble in water, and very ucarly as cryf. tallizable as alum. When borax is expefed to the fire, it firlt bubbles and foams very much, but afterwards it melts into a clear glafs. When acids ase combiaed with the alkaline part of borax, a fubftance of a fingular na.
ture is feparated from it, commonly called fedatize fait. Although this follfance acts as an acid in borar, by fa. turating its alkali, yet it has no acid tafte, nor doth is turn the tintture of heliotropium to a red, as other acids do. It is the property of borax to facilitate confiderably the fufion of metals, of carths, and other minerals. Some fpecies of fones and earths cannot be vitrificd at all, except they are mixed with borax. For this property borax is commonly ufed as a flux (that is, a fubflance which facilitates the fufion of other bodies) in various manufactories; but efpecially in foldering metals, and in affaying ores. Phofphoric falts are combinations of alkaline, earthy, and metallic fubftarces with the acid obtained from the phofphorus of urine. Befides the abovementioned falts, there are feveral others to be :net with in the writings of the chemical and medical authors; but, as they are of little confequence, we fhall omit any account of them.

Some new neutral falts have been formed by the dephlogificated marine, or, according to the new theory;, the oxygenated muriatic acid.-This was firf taken notice of by M. Berthollet, and the difcovery is thus illuftrated by Dr Dollfufs, in Crell's Annals for the year 1788, vol. i. p. 319.
"In the month of November 1786 (fays he), whilit I was preparing to trandlate Higgins's experiments refpeating the acetous acid, I found the following amongtt the numerous obfervations which that work contains, p. 180. 'The acid elaftic fluid which iffues, when two pounds of manganefe are mixed and difilled with two or three of ordinary fpirit of fea-falt, masy all, except a fmall portion of phlogiftic air, be condenfed in a folution of fixed vegetable alkali; and the folution thus impregnated yields a confiderable quantity of nitre, which cryftallizes in the ordinary form, and dctonates on redhot coals. The folution at the fame time yields regenerated fea-falt." The part of this propofition which relates to the form of the cryftals and to their detonation is fufficiently plain; but that I might have a fill morc complete conviction on the fubject, I repeated the experiment upon a fmiall fcale.
"For this purpofe I put into a vial an ounce of pulverifed oxyd (calx) of manganefe with an ounce and a half of muriatic acid, and by means of a bent tube I directed the vapour into another vial, which contained a colution of vegetable alkali. I then difilled by the sentle heat of a fimall lamp. From the vial containing the alkali went a fecond tubc, for the purpofe of carrying off the air which I hoped to obtain by this procefs.
"As foon as the oxygenated muriatic acid appeard, fome air efcapped through the tube, which fhowed all the properties of common atmofpherie air; and as fion as all the air which the vials contaned previous to the diftillation had been expelled, no more fuch air appeared. The vapours of the oxygenated muriatic acid were abforbed by the folution of vegetable alkall, without the extrication of the fmalletk portion of carbonic acid (ixed air) from the alkali. As faft as the alkali, which adhered to the lides of the glafs, abforbed the acid vapour, prifmatic cryltals appeared; and many more, which I obrained a few hours afterwards, were formed in the liquor. Although thefe cryftals detonated in the fire, they had a taile very different from that of nitre. It was extremely pungent, and was rendered fill

\section*{SA L}

Eali. more intolerable by the fuffocating odour of the nitiomuriatic arid (aqua regia). In order to complete the cryftalization, I evaporated in the fame vial the remaining liquor. As foon as the vapour appered, a quantity of carbonic acid was difengaged, and after wards tome atmofpheric air. I'he falt which 1 obtained by cryitalization after the craporation was a true muri.st ot potafh, which did not detonate in the firc. Probably Mr Higgins performed the operation in the way I have defribed; but he was too hatly in concluding this falt to be nitte merely becaule it detonated. I gave an acconnt of this experiment to Mr Kirwan at the time, and foom after communicated it to \(\operatorname{Pr}\) feffior Gadolin, who offered to aflift me in repeating the experiment.
" We apreed to employ cryllallized carbonat of foda (mild mineral alkali); and the following was the refult of our experiment. We diffolved fome of this carho. nat in a large quantity of water. and we employed two or three hours a day, for feveral fucceffive days, in introducing into the folution as much oxjgenated musiatic gas as was fufficient entirely to faturate it ; we then poured the faline liquor into a glafs bafon, and left it covered over to evaporate fpontaneoufly. Alter fome time a number of primatic cryltals were formed, which detonated in the fire like nitre. They occalioned a brown precipitate from a folution of iron in fulphuric or vitriolic acid; and mixed with fal ammoniac, they gave out a flrong ammoniacal odour, accompanied with fome efferveicence, which was to be attributed to the extrication of fixed air during the mixture. The remaining part of the liquor evaporated again, produced frefh crytals, which, though they certainly had a faint fmell of oxygenated muriatic acid, in reality confited partly of muriat of foda (common falt), and partly of uncombined foda; for they did not detonate, and they precipitated iron of a light green colour. The liquor which appeared above thefe cryftals, however, had not yet entirely loft the fmell of the oxygenated muriatic acid. Since this, M. Gadolin has made the following experiment, which he communicated to me. He put two drams of magnefia, faturated with carbonic acid, into an ounce and a ha! fof water, into which he introduced during feveral hours a quantity of oxygenated muriatic gas. The water evidently acquired the odour of the oxygenated muriatic acid. He filtered the liquor, and walhed and dried that part of the magnelia which had not been diffilved, and which weighed one dram 4 -5ths, fo that the water was found to have diffolved \(1-5\) th of a dram. As foon as the liquor began to boil, a ftrong effervefcence was occafioned, fome oxygenated muriatic gas was difengaged, and a fmall quantity of carbonat of magnefia was precipitated. When the liquor had become cool, it was filtered, that it might be feparated from the precipitated powder. It had hitl the fame odour ; and on being again heated, an effervefcence fimilar to the firft took place, and a frefla quantity of carbonat of magnelia was feparated. This phenomenon appeared every time M. Gadolin boiled the liquor after its coolng, till at latt he had evaporated it to drynefs, when there fill remained a fmall guantity of magnefia. Hence M. Gadolin concludes, that water, oxygenated muriatic acid, and carbonat of magnefia, form a combination which heat does not decompofe till the vapour of the water carries off the oxygenated muriatic acid, at which time the carbonat of magnefia is precipi-
tated. In confequence of what we have now related, we ought to reckon, in addition to the two fallts difco. yered by M. Berthollct, another falt, to which, according to the ne:s French nomenclature, might be given the name murias oxygeratus magnefic liquidus, becaule we cannot obtain it in at cuncrete furm. The oxy genated muriatic acid appears to enter into a very different, or at leaft into a much more intimate, combination with the metals; a fubject which greatly merits the attention of the chemint.

The probability of this propofition is frengthened by the theory of M. Berthollet; according to which the mercury in corrofive muriat of metcury (corrofive fublimate) is combined with the oxygenated muriatic acius, to as not to be feparated from it without great difficulty.

Commoiz Salt, or Sea-Salt, the name of that falt egtracted frum the waters of the ocean, which is ufed in great quantitics for preferving provifions, \&c.

It is a perfect neutrai falt, compofed of marine or muriatic acid, faturated with mineral alkali. It has a faline but agreeable flavour. It requires about four times its weight of cold water to be diffolved, and nearly the fame quantity of boiling water, according to Macquer. But according to Kirwan, it only requires 2,5 its weight of water to be diffolved in the temperature of fixty degrees of Farenheit. This falt always contains fome part formed with a calcaroous bafe; and, in order to have it pure, it mult be diffolved in diftilled water; then a folution of mineral alkali is to be poured in it until no white precipitation appears ; then by filtrating and evaporating the folution, a pure common falt is produced. Its figure is perfeally cubic, and thofe hollow pyramids, or tremies as the French call them, as well as the parallelopipeds formed fometimes in its cryftallization, confit all of a quantity of fmall cubes difpofed in thofe forms. Its decrepitation on the fire, which has been reckoned by fome as a characteriftic of this falt, although the vitriolated tartar, nitrous lead, and other falts, have the fame property, is owing chiefly to the water, and perhaps alfo to the air of its cryflallization.

Its fpecific gravity is 2,125 according to Kirwan. The acid of tartar precipitates nothing from it. One hundred parts of common falt contain thirty-three of real acid, fifty of mineral alkali, and feventeen of water. It is commonly found in falt water and falt fprings, in the proportion of even thirty-fix per cent. It is found alfo in coals, and in beds of gypfum. This falt is unalterable by fire, though it fules, and becomes more opaque: neverthelefs a violent fire, with the frec accefs of air, caufes it to evaporate in white flowers, which flick to the neighbouring bodies. It is only decompofed, as Macquer affirms, by the vitriolic and nitrous acid; and alfo by the boracic or fedative falt. But although nitre is decompufed very eafily by arfenic, this neutral marine falt is nowife decompofed by the fame. According to Mongez, the fixed vegetable alkali, when cauftic, decompofes alfo this marine falt. It preferves from corruption almofl all forts of animal food much better for ufe than any other falt, as it preferves them without deftroying their tafte and qualities; but when applied in too fmall a quantity, it then forwards their corruption.

Of this moft ufeful commodity there are ample fores on land as weht as in the ocean. There are few countries
shit. which do not afford vaft quantities of rock or fofil falt. Mines (a) of it have long been difcovered and wrought in England, Spain, Italy, Germany, Hungary, Poland, and other countrics of Europe. In reveral parts of the world there are huge mountains which wholly confift of foffil falt. Of this kind are two mountains in Ruffia, nigh Allracan; feveral in the kingdoms of Tounis and Algiers, in Africa; and feveral alfo in Afia; and the whule inland of Ormus in the Perfin gulf almoft entircly confifts of foffil falt. The new world is likewife Itored with treafures of this ufeful mineral, as well as with all other kinds of fubterranean produstions. Noreover, the fea affords fuch valt plenty of common falt, that a!! mankind might thence be fupplied with quantities fufficient for their occafons. There are alfo innumerable fprings, ponds, lakes, and rivers, impregnated with commun falt, from which the inhabitants of many countrics are plentifully fupplied therewith. In fome countries which are remote from the fea, and have little commeree, and which are not bleffed with mines of falt or falt-waters, the neceffities of the inhabitants have forced them to inveut a method of extracting their common falt from the afhes of vegetables. The muriatic falt of vegetables was defcribed by Dr Grew under the title of lixiviated marine falt. Leeuwenlook obtained cubical cryttals of this falt from a lixivium of foda or kelp, and alfo from a folution of the lixivial falt of carduus benedictus; of which he hath given figures in a letter to the Royal Society, publithed in No 173. of their Tranfactions. Dr Dagner, in AG. A.ad. N. C. vol. v. obf. 150. takes nutice of great quantities of it which he found mixed in pctathes. And the ingenious Dr Fothergill extracted plenty of it from the afhes of fern: Sce Rictical ES. fays, vol varticle 13 .

The muriatic falt which the exceilent Mr Boyle extracted from findiver, and fuppofed to be produced from the matcrials ufed in making glafs, was doubilefs feparated from the kelp made uie of in that procefs. Kunckel alfo informs us, that he took an alkaline fale; and alter calcining it with a moderate fire, difolved it in pure water, and placing the folution in a cool cellar, obtained from it many cryftals of a neutral falt. He fuppofes, that the alkaline falt was by the procefs converted into this neutral falt. But it is more eafonable to believe, that the alkaline falt which he applied was not pure, but mised with the muriatic falt of vegetables, which by this procefs was only feparated from it.

It is doubtiefs cliefly this muriatic falt which, in fome of the inland parts of Afia, they extract from the athes of Juck-weed and of Adam's figotree, and ule for their common falt.

That they are able in thofe countries to make com. mon falt to profit from regetables, ought not to be wondered at, fince in Dehli and Agra, cafitals of Indoftan, falt is fo fearce as ufually to be fold for half-acrown a pound. We may therefore give fome credit to Marco-Polo, when he informs uc, that in the inner parts of the fame quarter of the world, in the province Vol. XVI.
of Caindu, lying vert of Tebeth, ti e natives ofed falt inftead of money, it being firt made up in cakes, and fealed with the Ramp of their prince; and that they made great profit of this rwoney by exchanging it with the neighbouring nations fur guld and mulk. We are alfo told by Ludolfus, in his Hiforia Fetriopica, that in the country of the Aby fines there are mountains of falt, the which when dug out is fnft, but foors grovs hard; and that this falt ferves them inftead of money to buy all things. The fame is confirmed by Ramufio.

Mr Bosle difcovered common falt in human blood and urine. "I have obferred it (fays Mir Brownrigg), not only in human urine, but alfo in that of dogs, horfes, and black cattle. It may eafily be difoovered in thefe, and many other licuids impregnated with it, by certain very regular and beautiful itarry figures which apfear in cheir furfaces after congclation. "Thefe figures I filt obferved in the great froft in the year 1739 . The dung of fuch animals as feed upon grafs or grain, doth alfo contain pienty of conmon falt."

Naturalifs, oblerving the great variety of forms under which this falt appears, have thought fit to rauk the feveral kinds of it under certain general clafies; diflinguithing it, mof ufually, into rock or foffil [alt, fea-Cait, and brine or fountain f:1t. To which clafec, others miglit be added, of thofe muriatic falts whichare found in vegetable and animal fubitances. Thefe foreral kinds of common falt cften differ from earla cther in their outward form and appearance, or in fuch accidental properties as they derive from the hetcrogene. ous fubltances with which they are mixed. But when perfealy pure, they have all the fame qualities; fo that chenuits, by the exacteit inquiries, have not been abie to difcover any effential difference between thern; for Which reafon we flail diftinguifl common falt after a different manner, into the three following kinds, viz. into rock or native falt, bay falt, and white falt.

By roik falt, or native falt, is underltond all falt, dug nut of the earth, which hath not undergone any artificial preparation. Under the title of bay falt may be ranked all kinds of common falt, cxtracted from the water wherein it is difilved, by means of the fim's heat, and the operation of the air; whether the water from which it is extragled be fea-water, or natural brine drawn from wells and fprings, or falt trater fagnating in ponds and lakes. Under the title of qubite fall, or boiled fall, may be included all hinds of common falt extrasted by costion from the water wherein it is diffolved; whether this water be fea water, or the f.lt water of wells, fountdins, lakes, or rivers; or water of any fort impregnaied with rock-falt, or other kinds of common falt.

The firt of thele kinds of falt is in feveral countries found fo pure, that it ferves for moft domentic ufes, without any previous preparation (triture excepted); for of all natural falts rock-falt is the mof abundartly furnifhed by nature in various parts of the world, being found in large maffes, occupying great trats of land. It is geserally formed in frata under the funface of the \(+K\) earth,
(A) Amongt the falt mines of chief note are thofe of Northwich in Chefhire, Altemonte in Calabria, Hail in Tyrol, Cardona in Catalonia : alfo ihnfe ftupendous mises at Wilieczka of Poland, and Scowar in Upper Hunfary ; of which fec accounts in Pliil. Tranf. No. 61. and 413.

\section*{S A L} bria, Egypt, Ethiopia, and the Ealt Indies. "I: England (fays Magellan), the falt mines at Northwich are in a high ground, and contain it in layers or ftrata of various colours, of which the yellow and brown are the moft plentiful, as I have obferved on the fpot, which I vifited in June 1782 , in company with my worthy and learned friend Mr Volta, profeffor of Natural Philofophy in the Univerfity of Pavia, and well known by his great abilities, and many difcoveries in that branch of knowledge. The mine into which we defcended was excavated in the form of a valt dome or vault under ground, fupported by various columns of the falt, that were purpofely left to fupport the incumbent weight. And the workmen having lighted a number of candles all round its circumference, it furnifhed us with the molt agreeable and furprifing tight, whillt we were defending in the large tub, which ferves to bring up the lumps that are broken from the mine, \&c. See the defcription of the famous falt-mines of Wilieczka in Poland, by Mr Berniaid, in the Yournal de Playfique, vol. 16. for 1780 , pag. 459, in which the miraculous tales concerning thofe fubterraneous habitations, villages, and towns, are reduced to their proper magnitude and eftimate." But the Englifl foffil falt is unfit for the ufes of the kitchen, until by folution and coction it is freed from feveral impurities, and reduced into white falt. The Britifh white falt alfo is not fo proper as feveral kinds of bay falt for curing filh and fuch fleth-meats as are intended for fea provitions, or for exportation into hot countries. So that for thefe purpofes we are obliged, either wholly or in part, to ufe bay falt, which we purchafe in France, Spain, and other foreign countries.

However, it does not appear that there is any other thing requifite in the formation of bay falt than to evaporate the fea-water with an exceedingly gentle heat ; and it is even very probable, that our common fea-falt by a fecond folution and cryllallization might attain the requifite degree of purity. Without entering into any particular detail of the proceffes ufed for the preparation of bay-falt in different parts of the world, we thall content ourfelves with giving a brief account of the beft mothods of preparing comnion falt.

At fome convenient place near the fea-fhore is crented the faitern. This is a long, low building, confitting of two parts; one of which is called the fore boufe Brownrigg and the othe: the pan-boufs or boiling boufe. The forean the Art houfe ferves to receive the fuel, and cover the work-
of thort pillars of caft iron erected upon it, fupports the bottom of the falt pan; it alfo fills up a confiderable part of the furnace, which otherwife would be too large, and would confume more coals than, by the help of this contrivance, are required. To each chamber of the furnace is fitted a grate, through which the athes fall into the ath-pits. The grates are made of long bars of iron, fapported underneath by ftrotig crofs bars of the lame metal. They are not continued to the fartheft part of the furnace, it being unneceflary to throw in the fuel fo far: for the flame is driven from the fire on the grate to the fartheft part of the furnace; and from thence paffes together with the fmoke, through two flues into the chimney; and thus the bottom of the falt pan is everywhere equally heated.

The falt pans are made of an oblong form, flat at the bottom, with the fides erected at right angles; the length of forme of thefe pans is 15 feet, in breadth 12 feet, and the depth 16 inches; but at different works they are of diferent dimenlions. They are commonly made of plates of iron, joined together with nails, and the joints are filled with a flrong cement. Within the pan five or fix Atrong beams of iron are fixed to its oppolite fides, at equal diftances, parallel to each other and to the bottom of the pan, from which they are diftant about eight inches. From theie beams hang down Atrong iron hooks, which are linked to other hooks or clafps of iron firmly nailed to the buttom of the pan; and thus the bottom of the pan is fupported, and prevented from bending down or changing its figure. The plates moft commonly ufed are of malleable iron, about four feet and a half long, a foot broad, and the third of an inch in thicknefs. The Scuts prefer fmaller plates, 14 or 15 inches fquare. Several make the fides of the pan, where they are not expofed to the fire, of lead; thofe parts, when made of iron, being found to confume faft in ruft from the feam of the pan. Some have ufed plates of caft iron, five or fix feet fquare, and an inch in thicknefs; but they are very fubject to break when unequally heated, and fkaken (as they frequently are) by the violent boiling of the liquor. The cement moft commonly ufed to fill the joints is plafter made of lime.

The pan, thus formed, is placed over the furnace, being fupported at the four corners by brick work; but along the midille, and at the fides and ends, by round pillars of caft iron called taplins, which are placed at three feet diftance from each other, being about eight inches high, and at the top, where fimallelt, four inches in diameter. By means of thefe pillars the heat of the fire penetrates equally to all parts of the bottom of the pan, its four corners only cxcepted. Care is alfo taken to prevent the frioke of the furnace from paflung into the boiling houfe, by bricks and ftrong cement, which are clofely applied to every fide of the falt pan. In fome places, as at Blyth in Northumberland, befides the common falt pans here defcribed, they have a preparing-pan placed between two falt pans, in the middle part of the building, which in other works is the forchoufe. The fe.l-water being received into this preparing-pan, is thete heated and in part evaporated by the flame and heat conveyed under it through flucs from the two furnaces of the falt pans. Ind the hot water, as occation requires, is conveyed through troughs from
men ; and in the boiling-houfe are placed the furnace, and pan in which the falt is made. Sometimes they have two pans, one at each end of the faltern; and the part appropriated for the fuel and workmen is in the middle.

The furnace opens into the fore-houfe by two mouths, bereath each of which is a month to the afh-pits. To the mouths of the furnace doors are fitted; and over them a wall is carried up to the roof, which divides the fore-houre from the boiling-houre, and prevents the duft of the coal and the afhes and fmoke of the furnace from falling into the falt pan. The fore-houre communicates with the boiling-houfe by a door, placed in the wall which divides them.

The body of the furnace confilts of two chambers, divided from each other by a brick partition called the - :U feathar; which from a broad bara terminates in a

Silt. from the preparing pan into the falt pans. Various other contrivances have been invented to leffen the es. pence of fuel, and feveral patents have been obtained for that purpore ; but the falt-boilers have found their old methods the moft convenient.

Between tire fides of the pan and walls of the boil-ing-houfe, there runs a walk five or fix feet broad, where the workmen Itand when they draw the falt, or have any other bufinefs in the boiling-houfe. The fame walk is continued at the end of the pan, next to the chimncy ; but the pan is placed clofe to the wall at the end adjoining to the fore-houfe.

The roof of the boiling-houfe is covered with boards faftened on with nails of wood, iron nails quickly mouldering into ruft. In the roof are feveral openings, to convey off the watery vapours: and on each fide of it a window or twe, which the workmen open when they look into the pan whilft it is boiling.

Not far difant from the faltern, on the fea-fhore, between full fea and low-water marks, they alfo make a little pond in the rocks, or with fones on the fand, which they call their fump. From this pond they lay a pipe, through which, when the tide is in, the feawater runs into a well adjoining to the faltern; and from this well they pump it into troughs, by which it is conveyed into their fhip or ciftern, where it is fored up until they have occafion to ufe it.

The ciltern is built clole to the faltern, and may be placed mof conveniently between the two boilinghoufes, on the back fide of the fore-houre; it is made cither of wood, or brick and clay; it fometimes wants a cover, but ought to be covered with a fhed, that the falt-water contained therein may not be weakened by rains, nor mixed with foot and oher impurities. It hould be placed fo high, that the water may conveniently run out of it, through a trough, into the faltpans.

Befides the buildings already mentioned, feveral others are required; as fore-houfes for the falt, cifterns for the bittern, an office for his majeft's falt-oficers, and a dwelling-houfe for the falt-boilers.

All things being thus prepared, and the fea-water having food in the ciftern till the mud and fand are fettled to the bottom, it is drawn off into the falt-pan : And at the four corners of the falt-pan, where the flame does not touch its bottom, are placed four fmall lead pans called foralch pans, which, for a falt-pan of the fize above-mentioncd, are ufually about a foot and an halflong, a foot broad, and three inches deep; and have a bow or circular handle of iron, by which they may be drawn out with a hook, when the liquor in the pan is boiling.

The falt pan being filled with fea-water, a Arong fire of pit-coal is lighted in the furnace; and thern for a pan which contains about 1400 gallons, the falthoiler takes the whites of three eggs, and incorporates them well with two or three gallons of fea water, which he pours into the falt-pan while the water contained therein is orly lukewarm; and immediately ftirs it absut with a rake, that the whites of esges may cvery where be equally mixed with the falt-water.

Infead of whites of eggs, at many falterns, as at moft of thefe nigh Newcafle, they ufe blood from the butch. ers, either of theep or black catle, to clarify the fea-
water : And at many of the Scotsfalterns they do rot
\(8 a^{1} \mathrm{c}\) give themfelves the trouble of clarifying it.

As the water grows hot, the whites of eggs feparate from it a black frothy foum, which arifes to the furface of the water, and covers it all over. As foon ats the pa:a begins to bo:l, this foum is all rifen, and it is then time to 1 kim it off.

The moll convenient inftruments for this purpofe are fkimmers of thin ath boards, fix or eight inches broad, and fo long that they may reach above half way over the falt-pan. Thefe fkimmers have handles fitted to them; and the falt-boiler and his affiftant, each holding one of them on the oppofite fides of the pan, apply them fo to each other that they overlap in the middle, and beginning at one end of the pan, carry them gently forward together, along the furface of the boiling li quor, to the other end; and thus, without breaking the fcum, collect it all to one cnd of the pan, from whence they eafily take it out.

After the water is fkimmed, it appears perfectly clear and tranfparent; and they continue boiling it brifkly, till fo much of the frefh or aqueous part is evaporated, that what remains in the pan is a flrong brine almoft fully faturated with falt, fo that fmall faline cryftals begin to form on its furface; which operation, in a pan filled 15 inches deep with water, is ufually performed in five hours.

The pan is then filled up a fecond time with clear fea-water drawn from the ciftern; and about the time when it is half filled, the feratch-pans are taken out, and being emptied of the foratch found in them, are again placed in the corners of the falt-pan. The fcratch taken out of thefe pans is a fime white calcareous earth found in the form of powder, which feparates from the fea-water during its coction, before the falt begins to form into grains. This fubtile powder is violently agitated by the boiling liquor, until it is driven to the cor. ners of the pan, where the motion of the liquor being more gentle, it fubfides into the feratch pans placed there to receive it, and in them it remains undifturbed, and thus the greatelt part of it is feparated from the brine.

After the pan hath again been filled up with fea-waier, three whites of eggs are mixed with the liquor, by which it is clarified a fecond time, in the manner before defcribed; and it is afterwards boiled down to a frong brine as at firt ; which fecond boiling, may take up about four hours.

The pan is then filled up a third time with clear feawater; and after that, a fourth time; the liquor being cach time clarified and boiled down to a Arong brine, as before related; and the ficratcl-pans being taken out and emptied every time that the pan is filled up.

Then, at the fourth boiling, as foon as the cryftals begin to form on the furface of the brine, they flacken the fire, and only fuffer the brine to fimmer, or boil very gently. In this heat they conftanily endeavour to keep it all the time that the falt corns or granulates, which may be nine or ten hours. The dalt is faid to gramulate, when its minute ciyftals cohere together into little maltes or grains, which link down in the brine and lie at the bottom of the falt-pan.

When molt of the liquor is evaporated, and the falt thus lies in the pan almoft der on its furface, it is then
time to draw it out. This part of the procefs is performed by raking the falt to one fide of the pan into a long heap, where it drains a while from the brine, and is then filled out into barrows or other proper veffels, and carried into the flore-houfe, and delivered into the cuftody of the warehoufe keeper. And in this manner the whole procefs is performed in \(2+\) hours; the falt being ufually drawn every morning.

In the itore-houfe the falt is put into hot drabs, which are partitions like ftalls for horfes, lined on three fides and at the bottom writh boards, and having a llidingboard on the fore-fide to put in or draw ont as occafion requires. The bottoms are made thelving, being higheft at the back-fide, and gradually inclining forwards; by which means the faline liquor, which remains mixed with the falt, eafily drains from it; and the falt, in three or four days, becomes fufficiently dry; and is then taken out of the drabs, and laid up in large heaps, where it is ready for fale.

The faline liquor which drains from the falt is not a pure brine of common falt, but hath a fharp and bitter tatte, and is therefore called bittern; this liquor, at fome work: they fave for purticular ufes, at others throw away. A confiderable quantity of this bittern is left at the bottom of the pan after the procefs is finifhed; which, as it contains much falt, they fuffer to remain in the pan, when it is filled up with fea-water. But at each procels this liquor becomes more tharp and bitter, and alfo increafes in quantity : fo that, after the third or fcurth precefs is finifhed, they are obliged to take it out of the pan; otherwife it mixes in fuch quantities with the falt, as to give it a bitter tafte, and difpofes it to grow foft and rum in the open air, and renders it unfit for domeftic ufes.

After each procefs there alfo adheres to the bottom and fides of the pan a white ftony cruft, of the fame caica: eous fubfance writh that before collected from the boiiing liquor. This the operators call fone-f.ratib, diflinguithing the other found in the lead-pans by the nare of pozuder-firatch. Once in eight or ten days they feparate the flone-fcratch from their pans with iron picks, and in feveral places find it a quarter of an irch in thicknefs. If this fony cruft is fuffered to adhere to the pan much lenger, it grows fo thick that the pan is burat by the fire, and quickly wears away.

In Iv. de Pagés's Travels round the World, we find the following important fact. "I had been anxious (fays that author) to afcertain by comparifon, whether fea-water contains falt in greater quantity under the turrid than under the other zones; and my experiments on thi; linbject ferved to thow, contrary to what I expeited, that fea water is impregnated with falt in lefs quantity within than without the tropics." Thefe expuriments were made on a hundred pounds of fea-water, taken at the depth of ten fathoms, and weighed in water feates. Mo de Pagés has given a table of thefe experiments, from which it appears that 100 lb . of feawater ia \(+6^{\circ} 12^{\prime \prime}\) S. lat. gave \(+\frac{t}{2} \mathrm{lb}\). of falt, and in \(1^{\circ} 16^{\prime \prime}\) only \(3^{\frac{1}{2}} \mathrm{lb}\). and that in it N. lat. it gave \(4^{\frac{3}{2}} \mathrm{lb}\). and in \(4^{\circ} 22^{\prime}\) only \(3^{\frac{1}{2}} \mathrm{lb}\). thefe being the highen and lowef latituses ial which the experiments were made, and alfo the greatelt and leat quantities of falt.

Dity) \(\operatorname{On}\) SALT, a dificit brarch of the king of England's
extraordinary revenue, and confilts in an excife of \(\hat{j}^{s}\). 4 d. per bufhel impofed upon all falt, by feveral ftatutes of King William and other fubfequent reigns. This is not generally called an excife, becaufe under the management of different commiffioners: but the commiffioners of the falt-duties have, by fatute 1 Ann, c. 21 . the fame powers, and muft obferve the fame regulations, as thofe of other excifes. This tax had vifually been only temporary : but by fatute 26 Geo. 1I.c. 3. was made perpetual.

Triple Salts, a kind of falts formed by the union of three ingredients: the common neutrals being compofed only of two. They are but lately difcovered; and it is chiefly to the induftry of Mr Bergman that we owe the knowledge we have of them. Sometimes we meet even with falts of four ingredients; in which cafe we call the refulting compounds quadruple falts. The molt remarkable of thefe complicated fublances are the following.
1. Apluronitrum, or mineral alkali, combined with a fmall quantity of calcarcous earth. The three ingredients here are fixed air, pure alkali, and calcareous earth. "This falt (fays Cronfedt) is fo Arongly united with the calcareous earth, that the J.tter enters with it into the very cryftals of the falt; though, by repeated folutions, the earth is by degrees feparated from it, and fulls to the bottom after every folution." Cartheufer afferts, that, on throwing into its folution in water a fixed mineral alkali, the calcareous earth was precipitated; and on the contrary, by adding oil of vitriol, nitrous acid was expelled, and a Glauber's falt produced; "from which (fays M. Magellan) it is evident, that the aphronitrum is a triple falt arifing from the combination of the nitrous acid with calcareous earth and mineral fixed alkali." Wallerius mentions three feecies of this falt ; viz. one which contains only a mixture of calcareous earth with fixed mineral alkali. This, he fays, is the aphronitrum of the ancients; but he thinks that it ought to be rather called aphronatron, as they beftowed the name of natron upon the mineral alkali. The fecond fpecies is that defcribed by Cronftedt under the title of calcareous nitre. The third is that defrribed by Hoffman under the title of aphronitrum janenfe, into whofe compofition the vitriolic acid enters. It is a kind of Glauber's falt, and is frequently confounded with it.

The aphronitrum of Cronfedt is deferibed by him as appearing on old walls and below vaults, or in places where it cannot be wafhed away by the rain. When it contains any confiderable quantity of calcareous earth, it fhonts into rhomboidal cryftals, a figure frequently affected by the calcarenus earth when it Thoots into cryAtals: but when the aphronitrum is purer, it forms prifmatic cryfals. From thefe circumfances, M. Magellan thinks, that the aphronitrum is not only a triple but a multiple falt ; as thefe pieces of old mortar, covered with this white froft, on ancient walls, are the very fame from which the faltpetre-makers extract the mother water of nitre; after mixing with it the vegetable afhes to furnin the alkali.
2. Common falt with magnefia, or mineral alkali, contaminated by muriatic magnefia. This is a compound of common falt with magnefia, and is very deliquefcent, owing to the compound of magnefia and fipi-
rit of falt; for neither mineral alkali nor pure fea-falt are at all deliquefent in the air.
3. Vitriolated magnefia with vitriol of iron, or Epfon falt contaminated with copperas. This, according to M1. Monct, is found in fome mineral waters.
4. Native alum contaminated with copperas. This is fometimes found in the aluminous fchiltus, and eflorefces in a feathery form, and is perhaps the plumofe alum of the ancients.
5. Native alum contaminated with fulphur. Dr Withering informs us, that this falt is met with about Wednegburg and Belfon, two places in Staffurdihire, where the coal-pits are on fire. It fublimes to the furface, whence it may be collected in confidcrable quan. tity during dry or frofly weather. Our author, howcrer, does not certainly affirm that this is a true chemical union, but the parts, he fays, camnot be diftin. guithed by the eye. It is kept in a deliquefcent fate by an accefs of vitriolic acid.
6. Native alum contaminated by vitriolated cobalt. This is found in fome of the mines of Herregrund and Idria, where it Moots into lo:g and flender filaments. M. Magellan fuppofes that this may be the trichites of the Greeks. On diffolving it in water, the prefence of the vitriolic acid is difcovered by adding a folution of torra ponderofa in muriatic acid ; the phlogifticated alkali throws down a precipitate of cubalt, which forms a blue glafs with cobalt or microcofmic falt.
7. Vitriol of copper with iron, the vitriolunf ferreoctspreun cyaticun of Linmeus. It is alfo called Vitriol of Hurgary, becaufe found in plenty in that country. Its colour is that of blue mixed with green; but fometimes the one thade prevails, and fometimes the other.
8. Vitriol of copper, iron, and zinc, is prepared in Sweden from the water pumped out of the copper mines at Dalame. The conper does not precipitate from a folution of this falt by rubbing it on irnn, as is the cale with the common blue vitriol. Large cryltals of this falt are often found in the water of the copper mines from whence it is prepared.
9. Vitriol of copper ant rinc. This is a quadruple f.lt, Ayled by Linnaus Vitriolun ferro-zinceo cupreune cyareum. Its colvur is blue inclining to green; and it does not precipitate the copper by rubbing on iron, as the common blue vitriol does. If is calld the blue vitriol of Gollar. Monger makes a feparate article of a compound falt memtioned by Wallerins, confifing alto of a vituolated copper with zisc, but whofe cryfals are of a tine red colour, found l.ately in the mines of Fahlun in Sweden. IIe adds, that the pale blue colour of the former falt hows the predominancy of the copper, by which it is necelfarily difinguithed from the latter, where the vitiol is over-faturated. M. Magellan, however, is of opinion, that the re? colour is owing to a proper quantity of iron in a dephlogiflicated fate, which has teen overloosed in that compound. To this kind alto Wallerius refers the yellowith sitriol found in Hungary.
1. Vitrinl of iron and zinc ; the green vitriol from Gr flat in the Hartz; the evirenlum zinceoferreum viride of Limnaths. It is of a pale-greca colour.

SiLf-Springs. Of thefe there are great numbers in different parts of the world, which undonbtedly have their origin from fome of the large collcettions of foftil fuit mentioned under the article Comnon S.art. See that aticle, and likewife Sprisig.

SALTIER, one of the honourable ordinaries. Sec Heralury, p. 452, and Plate CCXXX.

This, fays G. Leigh, in his Accedence of Arms, p. ;o. was anciently made of the height of a man, and driven full of pins, the ufe of which was to fcale walls, \&c. Upton fays it was an inftrument to catcla wild beafts, whence he derives this word from faltur, i. e. "a forefl." The French call this ordinary fautcir, from fa:ter "to leap;" becaufe it may have becn ufed by foldiers to leap over walls of towns, which in former times were but low; but fome modern authors think it is borne in imitation of St Andeew's crofs.

SALTING meat for the use of the nayy. The following is the method recommended by the late admiral Sir Charles Nnowles. When the ox is killed, let it be ikinned and cut up into pieces fit for ufe as quick as poffible, and falted whilc the meat is hot. For which purpofe we mult have a fufficient quantity of faltpetre and bas-falt pounded together and made hot in an oven of each equal parts; with this fprinkle the meat at the rate of about two ounces to the pound; then lay the pieces on thelving boards to drain for 24 hours; which done, turn them and repeat the fame operation, and let them lie for 24 hours longer. By this time the falt will be all melted, and have penetrated the meat, and the pieces be drained off; each piece mult then be wiped dry with clean coarfe cloths. A fufficient quantity of common falt mult then be made hot likewife in an oven, and mixed when taken out with about one-third of brown fugar : then the cafks being ready, rub each picce well with this mixture, and pack them well down, allowing about half a pound of the falt and fugar to each pound of meat, add it will keep good feveral years.

It is beft to proportion the cafks to the quantity ufed at one time, as the lefs it is expofed to the air the better. The fame procefs does for pork, only a larger quantity of falt and lefs fugar mult be ufed; but the prefervation of both depends equally upon the meat being hot when firlf falted.
One pound of beef requires two ounces of f.ltpetre and two ounces of baj-falt, becaute is is to be fprinkled twice; an ounce of each to a pound of beet both times. The faltpetre requifite for 100 lb . of becf is 12 \(\frac{1}{2} 1 \mathrm{~b}\), which at 32 d . per lb . is 12 s .6 G ; and the fame quantity of bay-falt (for 100 l's. of becf), at three half.pence per lb . is is. 6 d . ; of brown fugar and com. mon falt mi.sed together half a pound is required, the former in the proportion of onc-third, the latter of two. thirds, to a pound of becf. The brown fugar at 8 d . per pound. A hundred pounds of heef will take \(=50\) ounces of it, which cofts 10 s .5 d . The quantity of conmmon falt requifite for 100 lb . of beef is 533 ounces which at 2 d . per lb . amounts to 5 s . 6 d . Tie expence the: efore will fand thus.

Saltpeti:,
S. 1lipetre, \(12: \mathrm{lb}\). for 100 lb . of beef, is Bay-filt, \(12 \frac{\frac{3}{2}}{2} \mathrm{~b}\). for do. is Brown-fugar, 2;0 oz. for do, is Becf, 100 lb . at 6 d . per pound, is Three calks for it at is. 6 d . eacl, 1 abour, and heating the oven twice, Commun falt, 535 oz . for do. is
L. \(\circ 12\) - 1 - 105

There articles are taken high; and if baef colts 6 d . per pound, meat cured thus will cof lefs than \(t\) s. per pound; and therefore comes much cheaper than livellock in long fea-voyages.

\section*{saltpitre. See Chemistry, no 740.}

SALTSBURG, an archbifhopric of Germany, in the circle of Bavaria, bounded on the eaft by Stiria and the Upper Auftria, on the welt by the county of Tyrol, on the north by the duchy of Bavaria, and on the fouth by the duchy of Carinthia and the bifhopric of Brixen. It is faid to be about 100 miles from eaft to weft, and upwards of 60 from norch to fouth. With refpeet to the foil, it is very mountainous, yielding, however, excelient pafturage, and, in confequence of that, abounding in cattle, and horfes remarkable for their mettle and hardinets. This country is particularly noted for the great quantities of falt it produces, and its firong pafies and cafles. Here are alfo confiderable mines of gold, filver, copper, lead, iron, and lapis calaminaris, with quarries of marble, and a natural bot-bath. The principal rivers are the Salza, the Inn, the Ens, and Muer; which, as well as the lakes and other ftreams, are well-fored with finh. The peafants here are all allowed the ufe of arms, and trained to military duty. There are no nobles in the country, and mon of the lands belong ta the clergy. The llates confift of the prelates, the cities, and towns. Notwithfanding this country is under the power of a popift ecclefiaftic, and the violent, arbitrary, and oppreffive manner in which the Proteftants have always beed treated, great numbers of them Itill remained in it till the year 1732, when no lefs than 30,000 of them withdrew from it, difperfing themielves in the feveral Proteftant fates of Europe, and fome of them were even fent from Great Britain to the American colonies. Befides brafs and teel wares, and all firts of arms and artillery, there are manufactures of coarfe cloth and linen here. The archbithop has many and great prerogatives: he is a prince of the empire, and perpetual legate of the holy fee in Germany, of which he is alfo primate. He has the firt voice in the diet of this circle, and next to the electors in that of the enmpire, in the college of princes, in which he and the archduke of Auftia prefide by turns. No appeallies from him either in civil or ecclefiaftical caufes, but to the pope alone; and he is intitled to wear the liabit of a cardinal. He has alfo the nomination to feveral bilhoprics; and the canonicates that fall vacant in the montis in which the popes, by virtue of the concordat, are allowed to nominate, are all in his gift. His tuffragans are the bifhops of Freyfingen, Ratifbon, Brixen, Gurk, Chiemfee, Seckau, and Lavant; and of thefe, the four laft are nominated, and even confirmed by him, and not by the pope. At the diet of the empirc, his envoy takes place of all the princes that are prefent, under the degree of an elector. His revenue faid to amount to near \(2<0,0001\), a year, ia great past
of it arifing frcon the falt-works. He is able to raife shmurg. 25,000 men; but keeps in condant pay, befides his Salvadera. guards, only one regiment, confifing of 1000 men. His court is very magnificent ; and he has his hereditary great officers, and high colleges. The chapter confifts of 24 canons, who mult be all noble, but are obliged only to four months refidence. At his accefdion to the lee, the archbifhop muft pay 100,000 crowns to Rome for the pall. There is an order of knighthood here, innituted in 1711 , in honour of St Rupert, who was the firt bithop of Saltfourg about the beginning of the 8th century.

Saltsburg, the capital of a Geiman archbifhopric of the fame name, and which takes its own from the river Salza, on which it ftands, and over which it has a bridge. It is a very handfome place, well fortifed, and the refidence of the archbithop. The houfes are high, and all built of fone: the rcofs are in the Italian tafte, and you may walk upon them. The cafle here is very Atrong, and as Atrongly garrifoned, and well provided with provifions and warlike fores. The archbifhop's palace is magnificent; and in the area before it is a fountain, efteemed the largen and grandeft in Germany. The ftables are very lofty; and the number of the horfes ufually kept by the archbifhop is faid to be upwards of 2 co. The city, of which one part flands on a fleep rock, is well built, but the freets are narrow and badly paved. Belides the abovementioned, there are two other ftately palaces belonging to the archbifhop, one of which is called the Nuebuu, and the cher Mirabella. The latter of thefe has a very beautiful garden; and the number of trees in the orangery is fo great, that Mr Keyfler tells us, 20,000 oranges have been gathered from them in one year. The river Salza rans clofe by the walls of this garden. There are a great many other fine fructures in the city, public and private, fuch as palaces, monalleries, hofpitals, and church. es. In the cathedral dedicated to St Rupert (the apolle of Bavaria, and a Scotchman by birch), all the altars are of marble of different kinds, and one of the organs has above 3200 pipes. The whole Aruclure is extremely handfome. It is built of freefone in imitation of St Pcter's at Rome. The portico is of marble, and the whole is covered with copper. Before the portico there is a large quadrangular place, with arches and galleries, in which is the prince's refudence and there is a ftatue of Peter. In the middle of this place is an image of the Virgin in bronze; it is fine, but of an unnatural fize. There are large areas encompaffed with handfome buildings on both fides of the church. In the middle of that which is to the left, there is a mof magnificent fountain of marble, and fome valuable figures of gigantic fize. There is likewife a fountain in that to the right, but it is not tc be compared with the former one, and the Neptune of it makes but a very pitiful figure. This town contains many more excellent building and ftatues, which remind one that the borders of Italy are not far diftant. The winter and fummer riding fchools here are noble Atructures. The univerfity was founded in 1620 , and committed to the care of the Benedictines. Befides it, there are two colleges, in which the young noblemen are educated. E. Long. 33 . C. N. Lat. \(47 \cdot 45\).

SALVADORA, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants
\$alvage plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is quadrifid; there is no corolla; the berry is monofpermous; and the feed covered with an antlus or loofe coat.

SALVAGE-moxey, a reward allowed by the civil and fatate law for the faving of thips or goods from the danger of the fea, pirates, or enemies.- Where any thip is in danger of being ftranded, or driven on fhore, juftices of the peace are to commind the conftibles to affemble as many porfons as are neceffary to preferve it; and, on its being preferved by their means, the perfons affilting therein thall, in \(\quad\) o days after, be paid a reafonable reward for their falvage; otherwife the thip or goods fhall remain in the cultody of the officers of the cuftoms as a fecurity for the fame.

SALVATION, means the fafety or prefervation of any thing which is or has been in danger, and is generally ufed in a religious fenfe, when it means prefervation from eternal death, or reception to the happinefs of heaven, which is now offered to all men by the Chritian religion upon certain conditions. The Hebrews but rarely make ufe of concrete terms as they are called, but often of abftratted. Thus, inftead of faying that God faves them and protets them, they fay that God is their falvation. Thus the word of falvation, the joy of falvation, the rock of falvation, the fhield of falvation, the horn of falvation, \&cc. is as much as to fay, The word that deelares deliverance; the joy that attends the efcaping a great dauger, a rock where any one takes refuge, and where he may be in fafety from his enemy; a buekler, that fecures him from the arm of the enemy; a h rn or ray of light, of happinefs and falvation, \&c. See Theology, \&c.

SAlvator rosa. See Rosa.
SALVE regina, among the Romanits, the name of a Latin prayer, addrefled to the Virgin, and fung after complines, as alfo up:n the point of executing a criminal. Durandus fays, it was compofed by Perer bifhup of Compoftella. The cuftum of linging the falve regina at the clofe of the office was bigun by order of St Dominic, and frot in the congregation of Dominicans at Bologna, about 1237 . Greg ry IX. funt appointed it to be general. St Bermard added the conclufion, 0 dulcis! O pa, \&e.

SALVIA, sage : A genus of the monogynia order, belonging to the digynia clats of plants; and in the natural method ranking under the 42 d order, Verticillate. The corolla is unequal ; and the filaments placed crofswife on a pedicle. The molt remarkable fipecies are,
1. The officinalis, or common large fage, which is cultivated in gardens, of which there are the following varicties: t. The common gieen fage. 2. The wormwood fage. 3. The green faze, with a varicgated leaf. 4. The red fage. 5. The red lage with a variegated leaf. Thete are accidental variations, and therefore ate not enumerated as fecies. The common fige grows naturally in the fouthern parts of Enrope, but is in Britain cultivated in gardens for ufe; but that variety with red or blackith leaves is the molt common in the Britill gardens; and the wormword fage is in greater plenty there than the common grech-leaved fage, which is but in Sew gardens.
2. The tomentora, generally titled balfamic fate by the gardeners. The falks of this do not grow fo upright as thofe of the common fage; they are very hairy,
and divided into feveral branches, which are garnifhed with broad heart-1haped woolly leaves fanding upon long foot-ftalks; they are fawed on their edges, and their upper furfaces are rough : the leaves, which are upon the flower-falks, are oblong and oval, ftanding upon fhorter foot ftalks, and are very flightly fawed on their edges; they grow in whorled fpikes toward the top of the branches; the whorls are pretty far diftant, but few flowers in each; they are of a pale blue, about the fize of thofe of the common fort. 'This fage is preferred to all the others for making tea.
2. The auriculata, common fage of virtue, which is alfo well known in the gardens and markets. Tbe leaves of this is narrower than thofe of the common fort; they are hoary, and fome of them are indented on their edges towards the bafe, which indentures have the appearance of ears. The fikes of Howera are longer thait thofe of the two former forts, and the whorls are getierally naked, having no leases between them. The flowers are fimaller, and of a deejer blee than thofe of common red fage.
4. The pomitera, with fear-fhaped oval entire leaves. grows naturally in Crete. This hath a thrubiby fall: which rifes four or five feet high, dividing into feveral branches. The flowers grow in fikes at the end of the branches; they are of a pale blue colour, and have obtufe empalements. The branches of this fage have of ten punctures made in them by infects, at whicliplaces grow large protuberances as big as apples, in the fame manner as the galls upon an oak, and the rough balls on the briar.

All the forts of fage may be propagated by feeds, if they can be procured; but, as fome of them do not perfet their feeds in cold countries and moft of the forts, but efpecially the common kinds for ufe, are ealily propagated by flips, it is not worth while to raife them from iceds.
SALVIANUS, an ancient father of the Chrifian church, who flourifhed in the 5 th century, and was well fkilled in the feiences. It is faid he lived in continence with his wife Palladit, as if the had been his filter; and that he was fo afflited at the wick.dnefs of that age, that he was called the Jeremiah of the fifth century. He aequired fuch reputation for his picty and learning, that he was named the mafier of the bi/kops. He wrote a Treatife on Providence; another on ivarice; and fome epittes, of which Baluze has given an excellent edition; that of Conrade Ritterhufius, in 2 vols octavo, is alfo efteemed.

SALUTATION, the act of fainting, greeting, or paying refpect and reverence to any one.

When men (writes the compiler of LeP/prit dis Curiofities Ufiges et dis Couthames) falute each other in an ami- of Literacable inanner, it fignifies little whether they move a par- tuse. ticular part of the hody, or pradife a particular ceremony. In thefe actions there mut exifl different caltoms. livery nation imagines it employs the moft ieafonable ones; but all are equally fimple, and none are to be treated as ridiculous. 'This infinite number of ceremonics may be reduced to two kinds; to reverences or filutations ; and to the touch of fome part of the hunan body. To bend and proftrate oнe's felfto exprefs fentiments of refpeet, appears to be a natural motion ; for tetrified perfons throw themfelves on the earth when they alore iavible beings. The aftectionate touch of
S.meation, the perfon they falute, is an exprefion of tendernefs. As nations decline from their ancient fimplicity, much farce and grimace are introduced. Supertition, the manners of a people, and their fituation, influence tha modes of falutation; as may be obferved from the inItances we collect.

Modes of falutation have fometimes very different characters, and it is no uninterefting fecculation to examine their thades. Many difplay a refinement of delicacy; while others are remarkable for their fimplicity, or for their fenfibility. In general, however, they are frequently the fame in the infancy of nations, and in more poliflied focieties. Refpect, humility, fear, and efteem, are expretled much in a fimilar manner; for thefe are the natural confequences of the organization of the body. Thefe demonftrations become, in time, only empty civilities, which firgnify nothing; we thall notice what they were originally, without reflesting on what they are.

The firt nations have no peculiar modes of fllutation; they know no reverences, or other compliments, or they defpife and difdain them. The Greenlanders laugh when they fee an European uncover his head and bend his body before him whom he calls his fuperior. The iflanders, near the Philippines, take the hand or font of him they falute, and with it they gently rub their face. The Laplanders apply their node Arongly againft that of the perfon they falute. Dampier fays, that at New Guinea they are fatisfied in plicing on their heads the leaves of trees, which have ever paffed for fymbols of friendfhip and peace. This is at leaft a picturefque falute.

Other falutations are very incommodious and painful; it requires great practice to enable a man to be polite in an ifland fituated in the Straits of the Sound. Houtman tells us, they faluted him in this odd way: "They raifed his left foot, which they paffed gently over the right leg, and from thence over his face." The inhabitants of the Philippines bend their body very low, in placing their hands on their cheeks, and raifing at the fame time one foot in the air, with their knce bent. An Ethiopian takes the robe of another, and ties it about his own wait, fo that he leaves his friend half naked. This cultom of undreffiag on thefe occafions takes other forms; fometimes men place themfelves naked befure the perinn whom they falute; it is to thow their humility, and that they are unworthy of appearing in his prefence. This was practifed before Sir Jofeph Banks, when he received the vifit of two female Otahatitans. Their innocent fimplicity, no doubt, did not appear immodeft in the eyes of the virtuedo. Sometimes they only undrefs partially. The Japanefe only t.ike off a llipper ; the people of Arracan, therr fandals in the freet, and their flockings in the houle.

In the progrcfs of time, it appears fervile to uncover one's felf. The grandees of Spain clain the right of appearing covered before the king to thow that they are not fo much fubjefted to him as the reft of the nation; and (this writer obferves) we may remark, that the Englith do not uncover their heads fo much as the other nations of Europe. In a word, there is not a nation (obferves the humourous Montaigne), even to the people who, when they falute, turn their backs on their friends, but that can be jultified in their cuftoms. It mult be obierved of the negrocs, that they are lovers of

Indicrouts actions, and thus make all their ceremonies salutation. farcical. The greater part pull the fingers till they crack. Snelgrave gives an odd reprefentation of the embafly which the king of Dahomy fent to him. The ceremonies of falutation confifted in the moft ridiculous contortinns. When two negro monarchs vifit, thes embrace in frapping three times the \(m\) ddle finger.

Darbarous nations frequently imprint on their falutations the difpofitions of their character. When the inhabitants of Carmena (fays Athenxus) would fhow a peculiar mark of efteem, they brearhed a vein, and prefented for the beverage of theirfriend the blood as it iffiued. The Franks tore hair from their head, and prefented it to the perfon they faluted. The flave cut his hair, and offcred it to his mafter. The Chinefe are fingularly affected in their perfonal civilities: they even calculate the number of their reverences. Thefe arc their moft remarkable pofures. The men move their hands in an affectionate manner, while they are joined together on the breaft, and bow their head a little. If they refpeit a perfon, they raife their hands joined, and then lower them to the earth in bending the body. If two perfons meet atier a long feparation, they both fall on their knees, and bend the face to the earth, and this ceremony they repcat two or three times. Surely rie may differ here with'the fentiment of Montargne, and contefs this ceremony to be ridiculous. It arifes fiom their national affectation. They fubltitute artificial ceremonies for natural actions. Their exprefions mean as little as their ceremonies. If a Chinefe is afked how he finds himfelf in healti? he anfwers, leery well; thanks to your abundant folicily. If they would tell a man that he looks well, they fay, Profperity is painted on your face; or, Your air announces your happinefs. If you tender them any fervice, they fay, My thanks fiould be immortol. If you praife them, they anfwer, How Jhall I dare to perfuade myfelf of rubal you fay of me? If you dine with them, they tell you at parting, \(W\) e bave not treated you with fufficient diffinction. The var rious titles they invent for each other it would be impoffible to tranflate.

It is to be obferved, that all thefe anfivers are prefcribed by the Chinefe ritual, or academy of compliments. There are determined the number of bows; the expreffions to be employed; the genuflections; and the inclinations which are to be made to the right or left hand: the falutations of the mafter before the chair where the franger is to be feated, for he falutes it moft profoundly, and wipes the duff away with the fkirts of his robe; all thefe and other things are noticed, even to the filent geftures, by which you are entreated to enter the houfe. The lower clafs of people are equally nice in thefe punctilios; and ambaffadors pafs 40 days in practifing them before they are enabled to appear at court. A tribunal of ceremunies has been erected, and every day very odd decrees are iflued, to which the Chinefe moft religioufly fubmit.

The marks of honour are frequently arbitrary; to be feated, with uc, is a mark of repofe and familiarity ; to fand up, that of refpect. There are countries, however, in which princes will only be addreffed by perfuns who are feated, and it is confidered as a favour to be pormitted to fand in their prefence. This cufnm prevail's in defpotic countries: a dcfpot cannot fuffer without difgult the elevated figure of his fubjects; he is fence mult lay thofe who behold him proftrate on the eartl) : he defires no eagernefs, no attention; he would only infpire terror.

The pope makes no reverence to any mortal except the emperor, to whom he llonps a sery little when he permits him to kifs his lips.

SALUTE, in miliary matters, a difcharge of artillery, or fmall arms, or bnth, in honour of fome perfon of extraordinary quality. The colours likewife falute royal perfons, and gener:ls commanding in chief; which is done by lowering the point to the ground. In the feld, when a regiment is to be reviewed by the king or his general, the drums beat a march as he paffes along the line, and the officers fa'ute one after another, bowing the'r hali-pikes or fwords to the ground; then recover and take off their hats. The enligus falute alrogether, by lowering their colours.

Salute, in the navy, a tellimony of deference or homage rendered by the hips of one nation to another, or by fhips of the fame nation to a fuperior or equal.

This ceremony is varioufly performed, accerding to the circumfanees, rank or fituation, of the parties. It confifts in firing a certain number of cannon, or volleys of fmall arms; in ftriking the colours or top-fails; or in one or more general fhouts of the whole fhip's crew, mounted on the matts or rigging for that parpofe.

The principal regulations with regard to falutes in the royal navy are as follow :
"When a flag-oficer falutes the admiral and commander in chief of the feet, he is to give him fifteen guns; but when captains falute him, they are to give lim ferenteen guns. The admiral and commarder in chief of the feet is to return two guns lefs to flag-officers and four lefs to captains. Flag.officers, faluting their fuperior or fenine officer, ate to give him thirteen guns. Mag-officers are to return an equal number of guns to flag-officers bearing their flags on the fame maft, and two guns lefs to the reft, as alfo to captains.
" When a captain falutes an admiral of the white or blue, he is to give him fifteen gans; but to vice and rear admirals, thirteen guns. When a flag-officer is faluted by,two or more of his majelly's mip, he is not to return the falute till all have finifhed, and then to do it with fuch a reafonable number of guns as he thall judge proper.
"In cafe of the meeting of two fquadrons, the two chiefs only are to exchange falutes. And if fingle Thips meet a quadron confitting of more than onc flag, the principal fitg only is to be faluted. No falutes fhall be repeated by the fame fhips, unlefs there has been a feparation of fix months at leaft.
"None of his majefly's thips of war, commanded only hy cap:ains, fhall give or receive falutes from one another, in whatfoever part of the world they

\section*{inect.}
- A Hag nfficer commanding in chief fhall be faluted, upon his firft hoifting his flag, by all the thips prefent with fich a number of guns as is allowed by the firft, third, or fifth articles.
" When any of his majefty's fltips flall mect with any Ship or thips belonying to any foreign prince or tlate, within his najefly's feas (which extend to Cape Finiferre), it is expected, that the frid foreign thips do

Arike thcir top fail, and take in their fazy, in a:l:mowledgement of his majelly's fovercigrty in the fe fous: and if any thall refufe or ofice to refint, it is en. joined to all Hag.officers and commanders to ufe their utmo? endeavours to compel them thereto, and not fuffer any diftomnut to be tone to his majetty. An:d if any of his majeity's fobjects thall fo much forget their duty, as to omit Etriking theit top fail in pafting by his majelty's fhips, the name of the ihip and matler, and foom whence, and whither bound, together with afidavits of the lact, are to be fent up to the fecretary of the admiralty, in order to their being proceeded againat in the sdmirality coutt. And it is to be ob. ferved, that in his majefty's feas, his majefty's fhip's are in movife to flrike to any; and shat in other parts, no thip of his majent's is to ftrike her flag or tonp-fail to any foreigner, unlefs fuch toreign thip thali have firfftruck, or :te the fame tinue frike, her flag or topfail to lis majetty's flip.
"The flag-officers and commanders of his majefty's Nhips are to be careful to maintain his majefty's honour upon all occafious, giving protection to his fubjects, and endeavouring, what in them lies, to fecure and encourage them in their lawful commerce; and they are not to injure, in any manner, the fubjects of his majefty's friends and allies.
"If a foreign admiral meets with any of his majeAty's fhips, and falutes them, he fhall receive gun for gun. If he be a vice-admiral, the admital nall anfwer with two guns lefs. If a rear-admiral, the admiral and vice-admiral thall return two lefs. But if the thip be commanded by a captain only, the flag-officer thall give two guns lefs, and captains an equal number.
"When any of his majelty's fhips come to an anchor in a foreign port or road, within cannon-fhot of its forts, the captain may falute the place with fuch a number of guns as have been cuftomary, upon good alfurance of having the fame number returned, but not otherwife. But if the fhip bears a flag, the flag-officer flall firtt carefully inform himfelf how flags of like rank, belonging to other crowned heads, have given or rcturned falutes, and to infift upon the fame terms of ref. pect.
"It is allowed to the commanders of his majefty's thips in foreign parts, to falute the perfons of any admirals, commanders in chief, or captains of Ships of war of foreign nations, and foreign noblemen, or Atrangers of quality, as alfo the factories of the king's fubjects, coming on board to vifit the thip; and the number of guns is left to the commander, as thall be fuitable to the occafion and the quality of the perfons vifiting; but he is neverthelefs to remain accountable for any exceffes in the abufe of this liberty. If the thip vifited be in company with other frips of war, the captain is not to make we ot the civilities allowed in the preceding articles but with leave and confent of the commander in chief or the fenior captain.
"Merchant--fhips, whether toreigners or belonging to his majelty's fubjects, faluting the admiral of the fleet, fhall be arfiwered by fix guns lefs; when therfalute any other flag-fhips, they thall be anfwered by four guns lefs; and if they falute men of war com. manded by captains, they fhall be anfwered by two guns lefs. If feveral merchant-fhips falute in company, no return is to be made till all have finihed, and then br

S.luzzo fuch a nunber of guns as flaill be thougint proper ; but though the merchant hips fhutild anfwer, there fhall be no fecond re:urn.
"None of his majefty's fhips of war farll falute any of his majelly's forts or calfles in G:eat Britain or Ireland, on any preterce whafiever.'

SAIITZZO, called by the French Saluces, a town and caftle of Italy, in Piedmenr, and capital of a marquifate of the fame name, with a bilhop's fec. It is fituated on an eminence at the foot of the Alps near the rive: Po, in E. Long. is. 27. N. Lat. 44. 35. It is fubject to the king of Sardinia.

Saluzzo, the marquilate of, a province of Piedmont in Italy, bounded on the noth by Dauphiny and the province of the Four Valleys, on the ealt by thofe of Saviglano and Follano, on the fouth by that of Cona and the county of Nice, and on the welt by Barcelonetta. It was ceded to the duke of Savoy in 1601.

SAMA, a town and fort in the hands of the Dutch on the Gold Coaft of Africa, ftands on an eminence, the fort being watered by the pleafant river of \(S\) George, that difcharges itfelf into the fea. The town contains above 200 houfes, which feem to form three ditinet villages, one of which is immediately under the cannon of the Dutch fort St Sebafian. Des Marchais deems this town to be one of the largelt on the whole coall, Barbor likewife agreeing with him in its fituition, extent, and number of inhabitants. The fole employment of the natives is fifhing; a circumfance which eafily accounts for their poverty. The government of this place is republican, the magiftrates having the fu. preme power, being fubject to periodical changes, and under the authority of the king of Gavi, who feldom however interferes in the affairs of the fate. This prince refides fome leagues diftant from the fea, is rich, and much refpected by his neighbours.

SAMANEANS, in antiquity, a kind of magi or philofophers, have been confounded by fome with the Bramins. They proceeded from Ariana, a province of Perfia, and the ncighbouring countries, fpread themfelves in India, and taught new doetrines.

The Bramins, before their arrival, it is faid, were in the higheft period of their glory, were the only oracles of India, and their principal refidence was on the banks of the Ganges, and in the adjacent mountains ; while the Samaneans were fettled towards the Indus. Others fay, that the Bramins acquired all their knowledge from the Sananeans, before whofe arrival it would be difficult to prove that the Bramins were the religious teachers of the Indians. The molt celebrated and ancient of the Samanean doctors was Boutta, or Budda, who was born 683 years before Chrilt. His fcholars paid him divine honours; and his doatrine, which confited chiefly in the tranfmigration of fouls, and in the worfhip of cows, was adopted not only in India, but alfo in Japan, China, Siam, and Tartary.. It was propagated, according to M. de Sainte Croix, in Thibet, in the 8th century, and fuccceded there the ancient religion of Zamolxis. The Samaneans, or Buddits, werc entirely deftroyed in India by the jealons rage of the Bramins, whofe abfurd practices and fables they affected to treat with contempt; but feveral of their books are ftill preferved and refpected on the coalts of Malabar,

We are told, tho, that feveral of the Bramin crders have adopted their manncr of living, and openly profefs the greatelt part of their doenrines. L'E'zour Vedum, ou Ancien Comment du I cdan, publined by M. de S. Croix, Paris 1779. See Bramins.

SAMAR, a Spanifh inand not far from Manilla in the E.ft lndies, is called Samar on the fide which looks towards the other inles, and fioztuo on that next the ve. ocean. It is like the trunk of a man's body, without P. 157. head or legs. Its greateft length, fiom Cape Baliquaton, which, with the point of Manilla, makes the ftrait of St Bernardino, in 13 degrees 30 ninutes north latitude, extends to that of Guignan in in degrees lowards the fouth. The other two points, maxking the greatelt breadth of the ifland, are Cabo de Spirito Santo, or Ciafe of the Holy Ghof, the hish mountains of which are the firt difcovered by fhips from New Spain; aud that which lying oppolite to Leyte weftward, makes another ftrait, icarce a fone's throw over. The whole compafs of the inaud is abour 130 leagues. Between Guignan and Cape Spirito Santo is the port of Borognon, and not far from thence thofe of Paldpa and Catubig, and the little ifland of Bin, and the coalt of Catarman. Veffels from countries not yet difcovered are very frequently caft away on the before-mentioned coaft of Palapa. Within the fraits of St Bernardino, and beyond Baliquaton, is the coaft of Samar, on which are the villages of Ibatan, Bangahon, Cathalogan, Paranos, and Calviga. Then follows the flrait of St Juanillo, without which, Handing eaftward, appears the point and little inand of Guignan, where the compais of the inland ends. It is mountainous and craggy, but fruitful in the few plains there are. The fruits there are much the dame as that of Leyte; but there is one particular fort called by the Spaniards chicoy, and by the Chinefe, who put a great value on it, \(\int_{c y z} u\), without kernels.

SAMARA, in botany; a genus of the monogynia order, belonging to the tetandria clafs of plants. The calyx is quadripartite, the corolla tetrapetalous; the famina immerfed in the bafe of the petal ; the ftigma funnel-fhaped.

SaMARCAND, or Sarmacand, an ancient and famous town of Afia, capital of the kingdom of the fame name in the country of the UBeck Tartars, with a caftle and a famous univerfity. The houfes are built with ftones, and it carries on a trade in excellent fruits. It is pleafantly feated near the river Sogde, a branch of the Amu, E. Long. 69. O. N. Lat. 39. 50. This town was the capital of the kingdom of Sogdia in the time of Alexander the Great, when it was called Murracanda. It was afterwards the capital of the cmpire of Tamerlane the Great. In the time of Jenghiz Khan, it was forced to yield to the arms of that crucl conqueror; by whom the garifon amounting to 30,000 men, were butchered; 38,000 of the inhabitants with their wives and children, were prefented to his generals; the reft were permitted to live in the city, on paying a tribute of 300,000 dinars or crowns of gold.

SAMARIA (anc. geog.) one of the three larger Cisjordan dittricts, fituated in the middle between Galilee to the north and Judea to the fouth, beginning at the village Ginæa, in the Campus Magnus, and ending at the toparchy called Acrobatena (Jofephus). Its
\(\underbrace{\text { Samaria. }}\)
foil differing in nothing from that of Judea; both equally billy and champangn, both equally tertile in corn and fruit (id.) Called the king fom of Samario in Ephrainn (Bible); compriling the ten triles, and conlequently all the country to the north of Judea and ealt and weft of Jordan.

Samaria, the capital city of the kinglom of Samaria, or of the ten tribes. It was built by Omriking of Ifrael, who began to reign in the year of the woals 3079 , and died 3086 ( 1 Kings avi. 24.) He bought the hill Samaria of Shemer for two talents of tilver, or for the fum of \(1.68+: 7: 6\). It touk the name of Samaria from Shemer the owner of the hill; though fome think there were already fome beginnings of a city, becaufe, before the reign of Omari, there is mention made of Samaria (1 Kings diii. 32.) in the jear of the werld 303c. But others take this tor a prolepfis, or an anticipation, in the difcourfe of the man of God, who fpeaks of Samaria undet the reign of Jeroboam.

However this be, it is certan that Samara wa no confiderable place, and did not become the cajutal city of the kingdom of Ifracl till after the reign of Omri. Before him, the kings of Ifrael dwelt at Snechem, or at Tirzah. Samaria was fituated upon an agreeable and fruitfil hill, andfan advantageous lituation, and was 12 miles from I) uthaim, 12 from Merrom, and four from Atharoth. Jofephus lay's, it was a day's journey from Jerufadem. Betrdes, though it was built upon an eminence, yet it mult have water in abundance; fince we find medals ttruck in this city, whereon is reprefented the goddefs Altarte treading a river under font; which proves it to have been well watered. And Jofephus obferves, that when it was taken by John Hircanus the prince of the Jews, he entirely demolithed it, and caufed even the brook to fow over is ruins, to obliterate all the footlteps of it.

The hings of Samaria omitted nothing to make this city the ftrongett, the fincelt, and the richelt, that was poffible. Alaib built there a palace of ivory (I Kings xxii. 39), that is, in which there were many ornaments of ivory. Amos deferibes Samaria under Jeroboam 11. as a city funk into all excelies of luxury and effeminacy (Ames iii. 15. and iv. 1, 2).

Ben-hadad king of Syria built public places or Atreets in Samaria ( 1 Kings x.x.34) probably for traflic, where his people divelt to promote trade. His ion Ben-ladad betieged this place under the reign of Ahab (1 Kings \(x \times .1,2,3\), \&c. ) in the year of the world 3103 .

The following year, Ben-hadad brought an army into the field, probibly with a defign to nuarch agrantt Samaria: but his army was again cut in pieces. Some years after this, Ben-haditd came a third time, lay down befure Samania, and reluced it to fuch necelfities by famine, that a mother was there forcol to eat her own child; but the city was reifeved by a fenfible effect of the protection of God.

Lafly, it was belieged by Shamanefor king of An:sia, in the ninth year of Hu thea king of lirael (2 Kings xii. 6, 7, S.C.), wheh was the fourth (t Hexeki,h king of Judah. It wats taken three years alter, in the year of the worl : \(5_{2} 8_{3}\). The prophet IIolealpeaks of the erueltics evenciled by Shalmanefer agmintt the hetienef (Hof. ... 4, 8, 9. ab. 1 ) ; and Michah fays, that this
city was reduced to a heap of fones (Mic. i. 6.). The saman, Cuthites that were fent by Efar-hadion to inhulit the Sanarita a country of Samaria, did not think it woth their while to repair the ruins of this city ; they dwelt at Shechen, which they made the capital city of their fate. Thes were dill upon this footing when Alexander the Great came into Phocnicia and Judea. However, tha Cuthites had rebuilt fonse of the houfes of Samaria even from the time of the return from the captivity, fince Ezta then fpeaks of the inhabitants of Samaria (Ezrad iv. 17. Nehem. iv. 2.); and that the Samaritans, being jealous of the farours that Alexander the Great had conferred on the Jews, revolted from him while this prince was in E.gypt, and burnt Andromachus alive, whom Alexander had left governor of Syria. Alex. ander marcled againft them, took Samarra, and put in Maccdmims to inhabit it ; giving the country round it to the Jews; and to encourage them to cultivate it, he granted them an exemption from tribute. The hing of Egypt and Syria, who fuccecded Alexander, deprived them of the pre perty of this country.

Bu: Alesander Balas king of Syria reftored to Jonathan Maccabrus the cities of Lydda, Ephrem, and Ramatha, which he cut off from the country of Samaria ( 1 Mac. x. 30, 38, and xi. 28, 34.) Laftly, the Jews re-entered into the full poffelion of this whole country under John Hircanus the Afmonæan, who took Samaria, and ruined it in fueh a manner, according to Jolephus, that he made the river run through its ruins. It continued in this c. ndition to the year of the world 39+7, when Aulus Gabinius, the proconful of Syria, ribult it, and gave it the name of Gabiniana. But it was yet but very inconfiderable, till Herud the Great rellored it to its ancient lultre, and gave it the Greek namme of Seballe, which in Latin is Augufa, in honour of the enperor Augulas, who had given him the property of this place.
The facred authots of the New Teftament fpeak but litile of Samaria; and when they do mention it, it is rather in refpest of the country ibout it, than of the city itrelf. (See Luke xvii. 11. John iv. t, 5.) It was there our Lord had the converfation withithe wo. man of Samaria, that is, with a Samaritan woman of the city of Sycbar. Alter the death of St Stephen, (Acts viii. \(1,2,3\). ), when the difciples were dilperfed through the cities of Judea and Samaria, St Philip the deacon witherew into the city of Samarid, where he made ferctal converts. When the apollles heard that this city had received the word of God, they fent Peter and John thither, to comminaicate the Holy Ghont to fuch as has been baptized. It was there they found Simon Nagus, who offered money to the aporites, being in hopes to buy this power of communicating the Huls Cho!t. Samaria is mover called Subate in the: bouks of the New Tellament, though Rrangeis hardl: knew it but by this manne. St Jerome fays, that i. wis though: Obadiah was batiadat Smaria. Me. altio flewed there the tcanbs of Elahat atod of it J la the Daptit. There are fuad mamy ancient medal; that were itruck at sobate, u: Sam uil, and fome b. thups of this ciey has fubtriod to the ancient evarcils.

 ;1. \(z\)
, maritatio are the people of the city of Sumaria, and the inhabitants of the province of which Samaria was the capital city. In this fenfe, it fhould feem that we might give the name of Samaritans to the Ifraelites of the ton tribes, who lived in the city and territory of \(S_{3}\) maria. However, the facred anthors commonly give the name of Samaritans only to thofe frange people whom the kings of Affyria fent from beyond the Euphrates to inhabit the kingdom of Samaria, when they took away captive the Iiraelites that were there before. Thus we may fix the epoch of the Samaritans at the taking of Samaria by Salmanefer, in the year of the world 3283 . This prince carried away captive the Iiraelites that he found in the country, and affigned them dwellings beyond the Euphrates, and in Affyria, (2 Kings xvii. 24.) He fent other inhabitants in their Itead, of which the moft confiderable were the Cuthites, a people defcended from Cufh, and who are probably of the number of thofe whom the ancients knew by the name of Scythians.

After Salmanefer, his fuccefor Efar-haddon was informed, that the people which had been fent to Samaria were infented by lions that devoured them, (2 Kings xvii. 25. ) ; this he imputed to the irnorance of the penple in the manner of wotthipping the god of the country: Wherefore Efar-haddon fent a prielt of the God of Ifrael that he might teach them the religion of the Hebrews. But they thought they might blend this religion with that which they profeffed before; fo they continued to worthip their idols as before, in conjunction with the God of Ifrael, not perceiving how abfurd and incompatible thefe two religions were.

It is not known how long they continued in this fate; bnt at the return from the captivity of Babylon, it appears they had entirely quitted the worhip of their idols; and when they afked permiffion of the Ifraelites that they might labour with them at the rebuilding of the temple of Jerufalem, they affirmed, that from the time that Efar-haddon had brought them into this country they had always worthipped the Lord, (Ezrah iv. 1,2,3.) And indeed, after the return from the captivity, the fcripture does not any where reproach them with idolatrous wor fhip, though it does not diffemble cither their jealoufy againft the Jews, nor the ill offices they had done them at the court of Perfia, by their flanders and calumnies, or the flatagems they contrived to binder the repairing of the walls of Jerufatem. (Nehem. ii. 10, 19. iv. 2, \&c. vi. 1, 2, \&cc.)

It dees not appear that there was any temple in \(\mathrm{Sa}-\) maria, in common to all thofe people who came thither from beyond the Euphrates, before the coming of Alexander the Geat into Juden. Before that time, every one uas left to his own diferetion, and worthipped the Lord where he thought fit. But they prefently comprehended, from the books ef Mofes which they had in their hands, and from the example of the Jews their neighbours, that God was to be worlhipped in that place only which he had chofen. So that fince they coukd not go to the temple of Jerufalem, which the Jews would not allow of, they bethonght themfelves of building a temple of their own upon mount Gerizim, near the city of Shechem, which was then their capital. Therefore Simballat, the governor of the Samaritans, applied himfell to Alexander, and told him be bad a for in-law, called Masaffes, fora to Jaddus
the high-prieft of the Jews, who had retired to Samaria Sanaritans, with a great number of other perfons of his own nation; that he defired to build a temple in this province, where he might exercife the high-prieflood; that this undertaking would be to the advantage of the king's affairs, becaufe in building a temple in the province of Samaria, the nation of the Jews would be divided, who arc a turbulent and feditious people, and by fuch a divifion would be made weaker, and lefs in a condition to undertake new enterprizes.

Alexander readily confented to what Sanballat defired, and the Samaritans prefently began their building of the itmple of Gerizim, which from that time they have always frequented, and Aill frequent to this day, as the place where the Lord intended to receive the adoration of his people. It is of this mountain, and of this temple that the Samaritan woman of Sychar fpoke to our Saviour, (John iv. 20.) See GERIZIM.

The Samaritans did not long continue under the obedience of Alexander. They revolted from him the very next year, and Alexander drove them out of Samaria, put Macedonians in thoir room, and gave the province of Samaria to the Jews. This preference that Alexander gave to the Ifraelites contributed not a little to increafe that hatred and animofity that had already obtained between thefe two people. When any Ifraelite had deferved punifhment for the violation of fome important point of the law, he prefently took refuge in Samaria or Shechem, and embraced the way of worfhip according to the temple of Gerizim. When the Jew were in a profperous cundition, and affairs were favourable to them, the Samaritans did not fail to call themfelves Hebrews, and pretended to be of the race of Abraham. But no fooner were the Jews fallen into diferectit or perfecution, but the Samaritans immediately difowned them, w uld have nothing in common with them, acknowledged themfelves to be Phoenicians originally, or that they were defcended frum Jofeph and Manaffeh his fon. This ufed to be their practice in che time of Antiochus Epiphanes.

The Samaritans, having received the Pentateuch, or the five books of Mofes, from the priff that was fent by Efar-hadion, have preferved it to this day, in the fame language and character it was then, that is, in the old Hebrew or Phoenician character, which we now call the Samatitan, 10 diflinguilh it from the modern Hcbrew charater, which at prefent we find in the books of the Jews. Thefe laft, after their captivity, changed their old characters, and took up thofe of the Chaldee, which they had been ufed to at Babylon, and which they continue fill to ufe. It is wrong, fays F. Calmet, to give this the name of the Hebrew character, for that can be faid properly only of the Samaritan text. The critics have taken notice of fome variations between the Pentateuch of the Jews and that of the Samaritans; but thefe varieties of reading chiefly regard the word Gerizim, which the Samaritans fecm to have parpofely introduced to fivour their pretenfions, that Mount Geizim was the place in whi h the Lord was to be adored. The other various readings are of fmall importance.

The religion of this people was at firlt the Pagan. Every one worfhipped the deity he had been ufed to in his own corntry ( 2 Kings xvii. \(25,30,31\). )

Banasritans. The Babylonians worfhipped Succoth-benoth; Cuthites, Nergal; the Hamathites, A/hima; the Avites, Nibhaz and Tartak; the Sepharvites, Adeam. melech and Ananmelech. If we would enumerate all the names of faife gods to whom the Samaritans have paid a facrilegious worlhip, we thould have enough to do. This matter is fufficiently perplexed, by reaton of the different names by which they were adored by different nations, infomuch that it would be almoll impor. fible to clear up this affair. Sce Succoth-besoth, \&c. Afterwards, to this profanc wormip the Sanaritans added that of the Lord, the God of Ifrael, (2 Kings xvii. 29, 30, 31, 32.) They gave a proof of their little regard to this wurflip of the true Cod, when under Antiochus Epiphanes they confocrated their temple at Gerizim to Jupieer Argivus. In the time of Alexander the Great, they celebrated the fabbatical year, aud confequently the year of jubilee alfo. We do not know whether they did it exactly at the fame time with the Jews, or whether they obterved any other epoch; and it is to little pu!pofe that fome critics have attempted to afcertain the firf beginning of it. Under the kings of Syria they followed the epoch of the Greeks, or that of the Seleucidx, as other people did that were under the goverument of the Selencidx. After that Herod had receftablithed Samaria, and had given it the name of Sebafte, the inkabitants of this city, in their med.ls, and ail public ats, took the date of this rew eftablithment. But the inhabitants of Samaria, of which the greater part were Pagans or Jews, were no rule to the other Samaritans, who probably reckoned their years according to the reigns of the emperors they were fubject to, till the time they fell unde: the jurndistion of the Muometans, under which the. live at this diy; and they reckon their year by the Hegira, or, a they fecak, accurding to the reign of Ithnatl, or the linmaclites. Such of our readers as define to be further acquaiated wi!! the hif. tory of the ancie:t Samaritans, we refer to the works of Jofephus, where they will tind that fubjef largely treated of.

As to their belief, it is chjected to them, that they receive only the Pentateuch, and rejeet all the other books of feripture, chietly the prophots, whe have more exprefsly declared the conveng of the Me:Gah.They have allo been accufed of believing \(G\) d to be corporeal, of denying the Holy Ghof, and the refurrection of the dead. J fus Chrilt reproaches them (John iv. 2z.) with wot thiping they know not what; and in the place alreads referred to he feems to exclude thens from falvation, when he fays, that "S.lvation is of the Jews." True it is, that thefe words might only figtily, that the Mefliah was to proceed from the Jews; but the crime of fhifn alone, and a feparation from the true church, was fufficient to exclude them from falvation. The Samaritan we man is a fufficient teftimony that the Samaritans expected a Metfiah, who they hoped would clear up all their doubts (Jo'm. iv. 25.) Several of the is.habitats of Shechem believed at the preaciang of Jefius Chrift, a:ld feveral of Samaria believed at that of St Philhp; but it is faid, they foon fell back to their former errors, being perverted by Simon Magus.

The Samaritans at prefent are very few in number. Jofeph Saliger, being curious to know their whages,
irtote to the Samaritans of Egypt, and to the high-Samaritar: prielt of the whole fect who relided at Nexpolis in Sy- Sinbucus. rid. They returned two anfwers to Scaliger, dated in the year of the Hegira 998. Thefe were preferved in the French king's library, and were tranflated into Latin by father Morin, and printed in England in the collectioa of that f.ther's letters, in 6882 , under the ticle oin Antiquitates Firclofis Oricntalir. By thele letters it appears, that they believe in Cod, in his fervant Mofes, the holy law, the mountain Gerizim, the houie of God, the day of vengeance and of peace ; that they value themfelves upon obferving the law of Mufes in many points more rigidly than the Jews themfelves. Thoy keep the fabbath with the utmoft trifnefs required by the law, without ftrring from the place they are in, but only to the fynagogue. Thes go not out of the city, and abfain from their vives on that day. They never delay circumcifion beyond the eighth day. They ftill facrifice to this day in the temple oa mount Gerizim, and give to the prieft what is enjoined by the law. They do not marry their own nieces, as the Jews do, nor do they allow themfelves a plurality of wives. Their hatred for the Jews may be icen through all the hiftory of Jofephus, and in feveral places of the New Teftament. 'I'he Jewifh hilkorian irforms us that under the government of Coponius, one patover night, when they opened the gates of the temple, fome Samaritans had fattered the bones of dead men there, to infult the Jews, and to interrupt the devotion of the feltival. The evangelifts thow us, that the Jews and Samaritans held no correfpondence together (John iv. 9.) "The Jews have no dealings with the Samaritans." And the Samaritan woman of Sychar was much furprifed that Jefus talked with her, and aiked drink of her, being a Samaritan. When our Saviour lent his apoftles to preach in Judea, he forbad them to enter into the Samaritan cities, (Matt. x. 5.) ; hecaufe he looked upon them as ichifmaties, and as Arangers to the covenant of Ifracl. One day when he fent his difciplestu provide him a lodging in one of the cities of the Samaritans, they would not entertain him, bccaufe they perceived he was groing to Jerufalem. (Luke ix. 52. 53.) "Becaufe his face was as though he would go to Jeruldem." And when the Jews were provoked at the reproaches of Jefus Chrift, they tnid him he was a S.maritan (John viii. 48.), thinking they could lay nothing more fevere again him. Jofephus relates, that fonc Simaritans having lilled feveral Jews as they were guing to the feaft at Jerufalem, this occafinne! a kind of a war between thens. The Samaritons continued their fealty to the Ronams, when the Jews revolted from them; yet they did not efeape from being involved in fom: of the calamities of their neighbours.

There are fill at this day fome Samaritans at Shechem, otherwife called Naploufe. They have pricles there, who fay they are of the family of \(A\) mon. They have a high-pricil, who relides at Shechem, or at Gerizim, wh orfers facrifices there, and who declares the feat of the palfover, an. 1 all the other leafts, to all the delperted Samartans. Since of them are in be tound at Ga<d, fome at Damacus, and fome at Grand Cairo.

SAMBUCUS, El.Der, in botany: A genus of the trigynia order, belong'ing to the pentundiat clafs of plants; and in the natual method ranking under the

Sambucus 43 d order, Duro \(\int\) a. The calys is quinquepartite; the II \(\underbrace{\text { Sannele. }}\) coroll. quinquefid; the berry irifpernous.
I'he moft remarkable fpecies arc, t. The nigra, or common black elder-tree, iffes with a tree-ftem, branching nunacroufly into a large fpreading head, twenty or thirty feet high; pinnated leaves, of two or three pair of oval lubes and an odd one; and large five parted umbels of white flowers towards the ends of the branches, fincceeded by bunches of black and other different coloured berries, in the varieties; which are-Common black-berried elder-tree-White-berried elder-Greenbernied elder-Luciniated, or parfley-leaved elder, having the folinles much laciniated, io as to refemble partley leaves-Gold-Atriped-laved elder-Silver-Ariped elder-Silver-dutled elder. 2. The racerrofs, racemofe red-berried elder, rifes with a trec-like ftem, branching ten or twelve fcet high, having redaill-brown banches and buds; pinnated leaves of fix ir feven oval deeply-\{awedlobes; and compound, oval, racemons, clulters of whitih-green flowers, fuccetded by oval clutters of 1 ed berries. This is a refident of the mountuinous parts of the fonth of Eutope, and is retained in our gardens as a flowering thrub, having a peculiar fingularity in its oval-cluftered flowers and bervies. 3 . The Canadenfis, or Canada thrubby elder, rifes with a lhrubby fem, branching eight or ten feet high, laving reddifh Thoots; fomewhat bipinnated leaves, often ternate below, the other compofed of five, feven, or nine oval lobes; and towards the ends of the branches, cymofe quinquepartite umbels of flowers, fucceeded by blackifh red berries. All the forts of elder are of the deciduous tribe, very hardy, and grow freely anywhere; are generally free fhooters, but particularly the common elder, and varieties, which make remarkably frong, jointed fhoots, of feveral feet in length, in one feafun; and they flower moflly in fummer, except the racemofe elder, which generally begins flowering in April; and the branches being large, fpreading, and very abundant, are exceedingly confpicuons; but they emit a moft difagreeable odour. The fowers are fucceeded in the moft of the forts by large bunches of ripe berries in antumn, which, slthough very unpalatable to eat, are in high eftimation for making that well known cordial liquor called cldor wine, particularly the common blackberried elder. The merit of the elder in gardening may he both for ufe and ornament, efpecially in large grounds.

SAMIAN EARTH, in the materia medica, the name of two fpecies of marl ufed in medicine, viz. 1. 'Ihe white kind, called by the ancients collyrium fa. mium, being aftringent, and therefore good in diarthas, dyfenteries, and hrmorrhagies: they alfo ufed it extern illy in inflammations of all kinds. 2. The brownift white kind, called aflar famas by Diofoorides ; this alio ftands recommended as an aftringent,

SAMIELS, the Arabian name of a hot wind pecular to the defert of Arabia. It blows over the defert
the appearance of the fky at or near the time this wind arifeth, have warning of its approach by a thick haze, which appears like a cloud of dult arifing out of the horizon; and they immediately upon this appearance throw themfelves with their faces to the ground, and continue in that pofition till the wind is paffed, which frequently happens almof inftantaneoully; but if, on the contrary they are not careful or brik enough to take this precaution, which is fometimes the cafe, and they get the full force of the wind, it is infant death.

The above method is the only one whieh they take to avoid the effects of this fatal blaft ; and when it is over, they get up and lcok round them for their companions; and if they fee any one lying motionlefs, they take hold of an amm or leg, and pull and jerk it with fome force; and if the limb thus agitated feparates from the body, it is a certain fign that the wind has had its full effect; but if, on the contrary, the arm or leg does not come away, it is a fure fign there is life remaining, although to every outward appearance the perfon is dead; and in that cafe they immediately cover him or them with clothes, and adminifter fome warm diluting liquer to canfe a perfpiration, which is certainly but flowly brought about.

The Arabs themfelves can fay little or nothing about the nature of this wind, only that it always leaves behind it a very ftong fulphureous fmell, and that the air at thefe times is quite clear, except about the horizon, in the \(n\) rth-weft quarter, before obferved, which gives warning of its approach. We have not been able to learn whether the dead bodies are fcorched, or diffolved into a kind of gelatinous fubltance; but from the flories current abont them, there has been frequent reafon to believe the latter ; and in that cafe fuch fatal effects may be attributed rather to a noxious vapour than to an abro. lute and exceffive heat. The Ptory of its going to the gates of Bagdad and no farther may be reafonably enough accounted for, if the effects are attributed to a yoifonous vapour, and not an exceflive heat. The abovementioned wind, Samiel, is fo well known in the neighbourhood of Bagdad and Baflora, that the very children fpeak of it with dread.

SAMOGITIA, a province of Poland, bounded on the north by Courland, on the eaft by Lithuania, on the wef by the Baltic Sea, and on the fouth by Regal Prufla, being about 175 miles in length and 125 in breadth. It is full of forelts and very high mountains, which feed a great number of cattle, and produce a large quantity of honey. There are alfo very ative horfes, in high efteem. The inhabitants are clownifh, but honelt; and they will not allow a joung woman to goolit in the night without a candle in her liand and two bells at her girdle. Rofenna and Wormia are the principal places.

SAMOIEDA, a country of the Ruflian empire, between Afiatic Tartary and Archangel, lying along the fea-coalt as far as Siberia. The inhabitants are fo rude a people that they can hardiy pretend to humanity, except in theis face and figure : they have little underitanding, and in many things refemble brutes, for they will eat carrion of evcry kind. They travel on the fnow on fledges, drawn with an animal like a reindeer, but with the homs of a Atag. Thofe who have feen them afinm, that no people on the earth make fuch fhocking figures: their thature is fort; their fhoulders
simolus Simpon.
and faces are broad, with flat broad nofes, great blub. bar lhanging lips, and ftaring eyes; their complexion is dark, their hair long and as black as pitch, and they have very little beards; and it is faid that all the Samoid women have black nipples. If they have any religion at all, it is idolatry, though there bas been fome attempt, of late to convert them. Their huts are made of bich bark fewed together, which is laid upon ftikes fot in the ground, and at the top is a hole to let out the fmoke; the fire is made in the middle, and beth men and women lie naked round them all night.The; have little regard to the nearnefs of kin, and take as many wives as they can keep: their only employ. ment is hunting and fifhing.

SAMOLUS, in botany: A genus of the monogynia order, belonging to the pentrandria clafs of plants; and in the natural method ranking under the 2 th order, Precis. The corolla is falver-fhaped, the famina furrounded by fmall fcales at its throat. The capfulc is unilocular inferior.

SAMOS (anc. geog.), an ifland at no great diftance from the promontory Mycale, on the continent of the Hither Afia, and oppofite to Ephefus; the difance only feven flad a (Strabo) ; a frec illand, in compafs S7 miles (Pliny) ; or 100 (Ifidorus) : with a cognominal town (Pnleny, Horace) ; fawous for the worfhip and a temple of Juno, with a noted afylum (Virgil, Strabo, Tacitus) ; and hence their coin exhibited a peacnck (Athenæus) : The country of Pythagoras, who, to avoid the oppreffion of tyrants, retired to Ita1y, the land of freedom. Samos, though not to happy in producing wine, which Strabo wonders at, all the adjoining iflands yielding a generous fort, yet abounds in all the neceffaries of life. The Vafa Samaia, among earthen ware, were held in high reputc. Samii, the pcople (Ovid).-The ifland is now in the hands of the Turks. It is about 32 miles in length, and 22 in breadth, and extremely fertile. The inhabitants live at their eafe, their taxation by the Turks being moderate. The women are very nalty and ugly, and they never fhift above once a month. They are cloathed in the Turkifh manner, excepta red coif, and their hair hanging down their baeks, with plates of filver or block-tin faftened to the ends. They have abundance of melons, lentils, kiJnes-beans, and excelle:t mulk adine grapes. They have white figs four times as big as the common fort, but not fo well taited. Their lilk is very fine, and their honey and wax admirable; befides which, their poultry are excellent: they have irnn mines, and moft of the foil is of a rully colour: they have alfo cmery Rone, and all the mounains are of white narble. The inha'riounts are about 12,000 who are almon all Greeks; and the monks and priefts occupy moh part of the ifland. They have a bifhop who relides at Cora. See Polrcrates.

\section*{Orbec's} Vorage to ing almolt like a trourh ; they are made of different di. China and menfions, but are mitly covered. Thefe hoats are as the Eaft Indies.
dows: the boards are fintened on buth fides to puns, which have notches like Aleps on the infiles, that the roof may be let down, and ref on them : on both chds of the deek are commonly two littic donrs, at lian :here is one at the hincmon end. A fine white fmoorh carpet fpread up as far as the Loards makes the fioor, which in the midule confifs of locfe boars's; tut this carpet is only made ufe of to fleep cit. As thefe boats greatly diff r from ours in fhape, they are likewie rowed in a different matincr: for two rowers, polling themfelves at the back end of the fampan, work it firwards very readily by the motion of two nars; and can al. molt turn the veliel juit as they pleafe : the oars, which are covered with a little hollow quadrangular iron, are laid on iron fwivels, which are faltened in the fides of the fampan: at the iron the oars are pieced, which makes them look a little bent: in common, a rower fits before with a fhert oar; but this he is forced to lay alide when he comes near the city, on account of the great throng of fampans; and this inconsenience has confirmed the Chinefe in their old way of rowing. Inftead of pitch, they make ufe of a cement like our putty, which we call chimam, but the Chine!e call it kiang. Some authors fay that this cement is made of lime and a refin cxuding from the tree tong yen, and bamboo ockam.

Befides a couple of chairs, they have the following furniture: two oblong tables o: boards on which fome Chinefe charafters are drawn; a lanthorn for the night-cime, and a pot to boil rice in. They have airo a little cover for their houfehold god, decorated with gilt paper and other ornaments : before him Atands a pos filled with afhes, into which the tapers are put before the idul. The candles are nothing elfe than bamboo chips, to the upper end of which law-dult of fandal. wood is fuck on with gum. Thefe tapers are everywhere lighted before the idnls in the pagodas, and before the doors in the Areets; and, in large cities, oceafion a fmoke very pernicious to the eyes. Before this idol Mands fome fomfo, or Chinefe brandy, water, Se. We ought to try whether the Chinefe would no: lik: to ule juniper-weod inflead of fandal-wood; which latter comes from Suratte, and has almoft the fame fmell with juniper.

SAMSON, one of the judges of Ifrael, memorable for his lupernatural Arength, his viftories over the Philiftines, and his tragical end, as related in the book of Fulges.

Sarissow's Poff, a fort of pillar erected in a fhip's hold, between the lower deck and the kelfon, under the edge of a hatchway, and furnithed with fiveral notches that ferve as fteps to mount or defend, as occation requires. This polt being firmly driven into its pl.ce, not only ferves to fupport the beam and fortify tue veldel in that pace, but alo to prevent the cargo or materids contained in the hold, from fhifting to the oppolite lide, by the rolling of the thip in a turoulent drat heavy fea.

Books of SAMUEL, twn canonical bnoks of the Old Tellament, as being ufually alicribed to the prophet s.muel.

Travels by
Heron.
at the fame time. Thicre is one market where old clothes are taken in exchange for new.

Wood for the carpenter's purpofe is extremely dear through Yemen ; and wood for the fire at Sana is no lefs fo. All the hills near the city are bleak and bare, and wood is thereiore to be brought lither from the difance of three days journey; and a carnel's buathen commonly cofts two crowns. This fcarcity of wood is particularly fupplied by the ule of a little pit-coal. Peats are burnt here; hut they are fo bad, that fraw mult be intermixed to make them burn.

Fruits are, however, very plenteous at Sana. Here are more than 20 different fpecies of grapes, which, as they do not all ripen at the fame time, continue to afford a delicious refrelhment for feveral months. The Arabs likewife preferve grapes, by hanging them up in their cellars, and eat them almoft through the whole year. The Jews make a little wine, and might rake more if the Arabs were not fuch enemies to Itrong liquors. A Jew convicted of conveying wine into an Arib's houfe is feverely punifhed; nay, the Jews mult even ufe great caution in buying and felling it among themfelves. Great quantities of grapes are dried here; and the cxportation of raifins from Sana is confiderable. One fort of thefe grapes are without foncs, and contains only a foft grain, the prefence of which is not perceptible in eating the railin,

In the cafte, which ftands on a hill, are two palaces." I fa:v (fays Niebuhr) about it fome ruins of old buildings, bat, notwithfanding the antiquity of the place, no remarkable inferiptions. There is the mint, and a range of prifons for perfons of different ranks. The reigning Imam refides in the city; but feveral princes of the blood-royal live in the cafte. The battery is the moft elevated place about thefe buildings; and there I met wih what I had no expectation of, a German mortar, with this infcription, 'Jorg Selos Gof. mick, 1513. I faw alfo upon the fame battery feven iron cannons, partly buried in the fand, and partly fet upon broken carriages. Thefe feven fmall cannons, with fix others near the gates, which are fired to announce the return of the different fefivals, are all the artillery of the capital of Yemen."

SANADON (Nocl Etiennc), a Jefuit, was born at Rouen in 1676 , and was a difinguifhed profeffor of bumanity at Cacn. He there became acquainted with Huet bilhop of Avranches, whofe tafte for literature and poetry was fimilar to his own. Sanadon afterwards taught rhetoric at the univerfity of Paris, and was entrulted with the education of the prince of Conti, after the death of Du Morceau. In 1728 he was made librarian to Louis XIV. an office which he retained to his death. He died on the zult September 1733, in the 58th year of his age。

His works are, 1. Latin Poems, in \(12 \mathrm{mo}, 1715\), and reprinted by Barbou, in 8vo, 1754. His Ayle poffefles the graces of the Auguftan age. His language is pure and nervous; his verfes are harmonious, and his thoughts are delicate and well chofen; but fometimes his imagination flags. His Latin poems confilt of Odes, Eleyies, Epigrams, and others, on viarious filbjects. 2. A tranflation of Horace, with Remarks, in 2 vols 4 to, printed at Paris in 1727 ; but the beft edition of this work was printed at Amferdam in 1735 , in 8 vols 12 mo , in which are alfo inferted the verfions

\section*{S A N}

Snballat, verfions and notes of M. Dacier. Sinadon trannated Sanchez. with elegance and tafte; but he has not preferved the fublimity of the original in the odes, nor the energy and precition in the epillles and fittires. In general, his verfion is rather a paraphrate than a faithiul trandlation. Learned men have jufly cenfured him for the liberty which he las taken in making confillerable changes in the order and Atrueture of the ndes. He has alfo givea offence by his uncouth or hography. 3. A Collection of Dif:ourfes delivered at diferent times, which affords frong proofs of his knowledge of nrators and peetry. 4. A book entitled Prieres it Infiruaions Chretiennes.

SANBALLAT, the chief or governor of the Cuthites or Samarituns, wis always a great enemy to the Jews. He was a native of Horon, or Horoniam, a city beyond Jordan, in the country of the Moabites. He lived is the time of Nehemiah, who was his great opponent, and from whofe hook we learn his hillory: There is one circumfance related of him which has occafioned fome difpute among the learned, and the fate of the queftion is as follows: When Alexander the Great came into Phonicia, and fat down before the city of T'yre, Sanballat quited the interefts of Datius king of Perfia, and went at the head of 8000 men to offer his fervice to Alexander. This prince readily on. tertained him, and being much folicited by him, gave him leave to erect a temple upon mount Gerizim, where he conftituted his fon-in-law Manaffech the higl-prielt. But this fory carries a flagrant anachronifm: for 120 years before this, th.1t is, in the year of the world 3550, Sanballat was governor of Samaria; wherefore the learned Dr Prideaux (in his Connegion of the Hiftories of the Oid and New T'eltament) fuppores two Sanballats, and endeavours to reconcile it to truth and probability, by Mowing it to be a miltake of Jofeplus. This author niakes Sanballat to flourifh in the time of Datins Codomannos, and to build his temple upon mount Gerizim by lieence from Alex.inder the Great ; whereas it was performed by leave frnm Darius Nothus, in the \(15^{\text {th }}\) year of his reign. This takesawaty the difficulty arifing from the great age of Sanballat, and brings him to be contemporary with Nehemiah, as the Scripture hiflory requires.

SANCHEZ (François), called in Latin Saneius, was of Las Brocas in Spain, and has been dignified by his own enuntrymen with the prmpous titles of le Pere de Ios Langue Latine, it le Doaeur de cous les Gens-de-tetres. He wrete, t. An excellent treatife intitled Minerva, or de Caufus Linnue Latine, which was publifled at Amferdam in 1714 , in 8 vo . The authors of the Poritrogal Mrethode de lit Langue Latine have been much indebted to : ihis work. 2. The Art of Speaking, and the Method of tranfatieg Authors. 3. Several other learned pieces on grammatr. He died in the year 1600 , in his 77 th year.

Vor. XVI.

We mutt be careful to diftinguith him from ancther singtoniue Frangsis Sanclez, who died at l'ouloufe in 163 2. This lant was a Portuguefe phylician whofertled at Coul, ufe, and, though a Chriftian, was born of Jewilh parerts. If: is faid to have been a maa of genius and a plii) fo. pher. His works have been collected urder the title of Opera Medi:a. His junati funt tractarus quidam phiofs. ticici non infubiles. They were printed at Toul.ufe is 1635.

SANCHONIATHO, a Phenician philofopher and hiftorian, who is faid to have floarithed before the Trojin war abcut the time of Semiramis. Of this moft ancient writer, the only remains critatut are fundry frayments of coimogony, and of the hiftory of the gods and firlt mortals, pelerved by Eufebris and Theodoret; beth of whm fpeak of Sanchoniatho as an accuratc and faithful hiftorian; and the fermer adds, that his work, which was tranflated by Fhilo-13iblius frem th.s Phenician into the Greek language, contains mary things relating to the hiftory of the Jews which deferve great credit, both becaufe they agree with the Jewifh writers, and becaufe the author received thefe particulars from the annals of Hierombalus, a pricll of the god Jao.

Several modern writers, horsever, of great learning, have called in queftion the very exiftence of Sanchoniatho, and have contended with much plaufibility, that the fragments which Eufebius adopted as genuine upors the authority of Porphyry, were forged by that author, or the pretended tranllator Philo, from enmity to the Chittians, and that the Pagans might have fomething to fhow of equal antiquity with the books of Mofes. Thefe oppofite opinions have produced a controverfy that has filled volumes, and of which our limits wnuld hardly admit of an abftact. We fhall therefore in fer: words flate what to us appears to be the truth, and refer fuch of our readers as are defirous of fuller information to the works of the authors (a) mentioned at the bottom of the page.

The controverfy refperting Stnchonia:ho refolves itfelf ir.to two queltions: 1. Was there in reality fuch a writer? 2. Was he of tine very remote antiquity which his tranfator claims for him?

That there was really fuch a writer, and that the fragments preferved by Elufebius are indeed parts of his hiftory interpolated perhaps by the tranflator ( \(B\) ), we are compelled to believe by the following reafons. Eu. febius, who admitted theri into his work as authentic, Was one of the inof learned men of his age, and a diligent fearcher into antiquity. His consuat at the Ni cene council thows, that on cvery fubjef he thought fo: himeff, neither biaffed by authority to the one lide, \(n\) ir carried over by the rage of innovation to the other. IFe had better means than any modern witer can have of fatisfying himfelf with refpect to the authenticity of a very eatraordinary worl, which tad then but lately

4 MI been

\footnotetext{
(A) Bochart, Scaliger, Volfus, Cumbcriand, Dodwell, Stillingीeet, Morhcim's Cudworth, and Warburton.
(B) Ot thi. there are indeed feveral prouls. Philo makes Sanchonatho feeak of Bylius as the moll atacent city of Phenicia, which, in all pubabihty, it was not. We read in the book of Judges of Berith or Bery!us, the city where Sanchoniatho himfelf lived; but not of By blus, which was the native city of Pbils, and to which lie is therefore partial. He makes him likewife talk of the Greels at a period long befure ang of the Grecian l:ates were known or probably peopled.
}

Surchonis- been tranfated into the Greck languaze, and made ge1ho. nerally Lnown; and there is nothing in the work itfelf, or at leaft in thofe parts of it which he has preferved, that could iaduce a wice and good man to obtrude it upon the public as genuine, had he himelef furpected it to be iputious. T'oo many of the Chiftian fathers were indeed very credulons, and ready to admit the authenticity of writings without duly weighing the merits of their cham ; but then fach writings were always believed to be favourable th the Chriftian caufe, and inimical to the caufe of Paganim. That no man of common fenfe could fuppore the coimengy of Sanchoniutho favourabe to the caufe of reveaced religion, a farther proof canrot he requifite than what is inminhed by the follow. i.g evtrast.
"He fuppofeth, or affirms, that the principles of the univerle was a dark and windy air, or :a wind made of dark air, and a turbulent evening chass; and that thefe things vere bomalief, and for a long time had no bund o-fgure. Dut when this wind fell in love with his oven primciples, and a misture was made, that mixture was called diefire or cuphid ( \(\pi c \theta \cdot \mathrm{c}\) ).
" This mixiure completed, was the beginning of the ( \(x\) :atem: raking of all things. But that wind did 1 ct know its own production; and of this, with that wiid, was begotten Mot, which fome call Mud, others the putretaction of a watery mixture. And of this carne all the feed of this building, and the generation of the univerfe.
"But there were celtain animals, which had no fenfe, out of which were begotten intelligent animals, and were called Zof hefemin, that is, the fpies or overfeers of Heaven; and were formed alike in the fhape of an egg. Thus ficne out Mot, the fun and the moon, the lefs and the greater flars.
" And the air fhining thoroughly with light, by its fiery influence on the fea and earth, winds were begotton, and clouds and great defluxions of the heavenly waters. And when all thefe things firft were parted, and were feparated from their proper place by the heat of the fun, and then all met again in the air, and dafhed agamit one another, and were fo broken to pieces; whence thunders and lightenings were made : and at the ttroke of thefe thunders the forementioned intelligent animals were awakened, and frighted with the found; a.d male and female flitred in the earth and in the fea: This :s their generation of animals.
" After thefe things our author (S.mnchoniatho) gnes on faying : Thefe things ate written in the Cofmogrny of Taantus, and in his menusirs; and out of the conjectures, and furer natural figns which his mind faw, and found out, and wherewith he huth enlightened us.
"A feerwards declaring the names of the winds, north and foutb and the relt, he makes this epilogue. - But thele firlt men confecrated the plants flonting out of the carth, and judged them gods, and worlhipped theni; upon whom they themlelves lived, and all their pofterity and all before them: to thefe they made their meat and drink offerings.' Then he concludes: 'thefe were the devices of worth p agreeing with the weaknefs and want of boldnefs in their minds."

Let us fuppofe Eufebius to have been as weak and credulous as the darkett monk in the darkeft age of Eurnpe, a fuppofition which no man wiil make who knows any thing of the witings of that eminent hifto-
rian; what could he fee in this fenfelefs jargon, which sanchoniaeven a dreaming monk would think of employing in fupport of Chrifianity? Eufthius calls it, and calls it truly, direat atheifm; but could he imagine that an ancient fyitem of atheifm would contribute fo much to make the 1'agans of his age admit as divine revelations the books of the Old and New Teftaments, that he fhould be induced to adopt, without examination, an impudent forgery not 200 years ofd as genuine remains of the moft remote antiquity ?

It this Phenician cofmogony be a fabrication of Porphyry, of of the pretended tranfator, it muft furely have been fabricated for fome puipore; but it is imnoffible for us to conceive what purpofe either of thefe writers could have intended to ferve by forging a fyltem fo extravagantly abford. Porphyry, though an enemy to the Chriftians, was not an atheilt, and would never have thought of making an atheif of him whom he meant to obtrude upon the world as the rival of Mofes. His own principles were thofe of the Alexandrian Platonifts; and had he been the forger of the works which bear the name of S:Inchoniatho, inftead of the incomprehenlible jargen about dirk wind, tiening chaos, Mot, the ourrfeers of beaven in the flape of an egg, and anmation proceciling from the found of thunder, we thunld doubtlefs have been amufed with refined ferculations concerning the operations of the Deviurgus and the other perfons in the Platonic Triad. See P̌atonism and PorphyRy.
Father Simon of the oratory imagines * that the * Bib.Crit. purpofe for which the hiftory of Sanchoniatho was wol. i. p. forged, was to fupport Paganifm, by taking from it its 1 iu. mytholngy and allegories, which were perpetually objected to it by the Chriftian writers; but chis learned man totally milakes the matter. The primitive Chriftians were too much attached to allegories themfelves to reft their objections to Paganifm on fuch a foundation: what they objected to that fyflem was the immoral ftories told of the gods. To this the Pagan priefts and philofophers replied, that thefe fories were only mythologic allegories, which veiled all the great truths of Theology, Lthics, and Phyfics. The Chuittians faid, this could not be; for that the fories of the gods had a fublantial foundation in fact, thefe gods being only dead men deified, who, in life, had like paftions and infirmities with other mortals. This then was the nbjection which the forger of the works of Sanchoniatho had to remove, if he really forged them in fupport of Paganilm; but, initead of doing fo, he gives the genea\(\operatorname{logy}\) and hiftory of all the greater geds, and fhows, that they were men deified alfer death for the exploits, fome of them grofsly immoral, which they had performed in this world. We have eliewhere (Polytheis:1, \(\mathrm{n}^{\circ}\) 17.) given his account of the deification of Chryfor, and Ouranos, and \(G c\), and Hyffifos, and Muth; but our readers may not perhaps be ill-pleafed to accompany hinn through the hiftory of Ouranos and Cronus, two of his greatelt gods; whence it will appear how hittle his writings are calculated to fupport the tottering calufe of l'aganifm againt the objections which were then urged to it by the Chrintian apologifts.
"Ouranos (fays he), taking the kingdom of his father, married Ge his fifter, and by her had four fons; Hus, who is called Cronus; Betylus; Dagon, who is Sithe, or the god of corm; and Athus. Dut by ohher wives

Sanclonis- Ouranos had much ifius, wherefore Ge being gricved at it and jealous, reproached Ouranos, fo as they parted frome eich other. But Ouranos, though he parted from her, yee by force invading her, and lying with her when he lifted, went away again; and he alfo attempted to kill the children he had by her. Geallo ofien defendeit or avenged herfelf, gathering auxiliary powers unto her. But when Cronus came to man's age, uling Hermes 'Triimegiftus as his counfellor and allittant (for he was his fecretary), he oppofed his father Ouranos, avenging his mother. But Cronus had children, PerIephone and Athen, ; the former died a virgin, but by the counfel of the latter Athena, and of Hermes, Cronus made of iron a feymetar and a fipear. Then Hermes, fpeaking to the affitants of Cronus with cuchanting words, wrought in them a keen defire to fight againt Ouranos in the behalf of \(G e\); and thus Cronus warring againtt Ouranos, drove him out of his kingdom, and fucceceded in the imperial power or ofice. In the light w.is taken at well-belaved concubine of Ouranos big with eliild. Cronus gave her in marriage to Dagon, and the brought forth at his houfe what fhe had in hicr wonib by Ouranos, and called him Demaroon. Afier thefe things Cronus builds:a wall round about his houfe, and founds Byllus the firt city in Phenicia. Afterwards Cronus, fufpeting his own brother Atlas, with the advice of Hermes, tarowing him into a deep hole of the eartly, thene buricd him, and having a fon called Sulfid, he difputched him with his own fiword, having a lifipicion of him, and deprived his own fon of liie with his own hand. He allo cut of the head of his own dutughter, fo that all the gods were amazed at tbe mind of Cronns. But in pracels of time, Ouranos being in flight, or banilhment, fends his daughter A. Itate, with two other fifters Rhe:a and Dione, to cut off Cronus by deceit, whom Cronus taking, made wives It there liters. Ouranos, undertanding this, fent Eimarmene and Hore, Fate and Beauty, with other au xiliaries, to war againtt him: but Cronus, having gained the affections of there alfo, kept them with himfelf. Morcover, the god Ouranos devifed Bietalia, contriving ftones that moved as having life. But Cronus begat on Aftarte feven daughters called Titanides or Arremides; and he begat on Rhea feven fons, the youngef of whom, as foon as he was born, was confecrated a god. A!fo by Dione he had daughters, and by Aflarte moreover two fons, Pothos and EVrot, i. c. Cupid and Love. But Dagon, after he had found out bread, corn, and the plough, was called Zens Arotrius. To Sylic, or the juff, one of the Titanides bare IJclippius. Cronus had alfo in Perata three fons, I. Cronus liis father's namefake. 2. Zeus Bisus. 3. Apoilo."

Is it conceivable, that a writer fo acute as Porphyry, or indeed that any man of common fenfe, either in his age or in that of Philo, would forge a book fillet with tuch fiories as thefe, in ordcr to reniove the Chriltian objections to the immoral charaders of the l'agan divinities? The very fuppofition is imponfle to be made. Nor let any one imagine that Satuchoniatho is here writing allegorically, and by lis tules of Ouramos, and \(G e\), and Cronus, is only perfonifying the beaven, the curth, and lime. On the contrary, he alfures us, that Ourames, or \(l_{\text {figgerus, or Autchrthan (for he gives him }}\) all thefe names), was the fon of ane Lligan or Ifypfiflos, who dweit about Byblus, and that from him the ele-
ment which is over us was called liearen, on account Sanchnonisof its excellent beanty, as the earih was named Ge after his fifter and wife. And his tranflator is very angry* with the Neotoric Greeks, as he calls them, bccaufe that, "by a great deal of force and Iraining, they aloured thy 11 , for 1 ray laboured to turn all the flories of the gods into allego- \(\varepsilon_{\text {vans. }}\). ries and phyfical difcourfes." This proves unanfwer. Lith, 1 . cop. ably, that the author of this book, whoever he was, did 6 not mean to veil the great truths of religion under the cloak of my thologic allegorics; and therefore, if it uas forged by Porphyry in fupport of Paganifin, the forger fo far miftook the thate of the queltion between him and his adverfaries, that he contrived a book, which, if admitted to be ancient, totally overthrew his own caufe.
The next thing to be enquired into with refpest to Sanchouiatho is lis antiquity. Did he really live and write at fo early a period as Porphyry and Philo pretend? We think he did not; and what contributes not a little to confirm us in our opinion, is that mark of national vanity and partiality, common to after-times, in making the f.ered mylteries of his own country original, and conreged from Phenicis isto Egypt. This, however, furnifhes an additional proof that Porphyry was not the forger of the work; for he well knew that the myfleries had their origin in Egypt (fee MrsteraEs), and would not have failen into fuch a blunder. He is guilty, indeed, of a very great anachronifm, when he makes Sanchoniatho contemporary with Semiramis, and yct pretend that what he writes of the Jews is compiled irom the records of Hierombalus tis prief of the god Jao; for Bochart has made it appear in the highelt degree probable \(\dagger\), that Hierombalus or Jeronb-baal is the Ferub baal or Giizon of fripiure.
Detween the reign of Semiramis and the Trojan war bo k . . lib. a period elapfed of near \(\$ 00\) years, whereas Gideon fluy. 2. cup. 1 irilhed not above feventy years before the defrution of Troy. But fuppofing Sanchoniatho to have really confulted the records of Gideon, it by no means follows that he flourihed at the fame period with that judge of Ifrael. He fpeaks of the building of Tyre as an ancient thing, while our beft chronologers t place it in the time of Gideon. Indeed, were we certain that any writings had been left by that holy man, we fhould be obliged to conclude, that a large trad of time had intervened between the death of their author and their falling into the hands of Sanchoniatho; for, furely, they could not, in a thort period, have been fo completely corrupted as to give any countenance to his impious abfurdities. His atheillic cofmogony he does not indeed pretend to have got from the annals of the griett of Jao, but from recurds which were depofited in his own town of Berytus by Thoth : Phemcian phillofiopher, who was afterwards made king of Egypt. But furely the annals of Gideun, if witten by himiet, and preferved pure to the days of Sanchoniatho, mutt have contained fo many truths of the Motaic religion, as mult have prevented any man of fenfe fromi: adopttiry fo impofible a theory as Thath's, though fanaimed by the greateft name of profine antiquity. Sisillinghec: indeed thinks it molt probabic that S:mchoniatho became acquainted with the moft remarkable paflages of the life ef Jerub-batal liom aunals writen by a Planician pen. Hzobferve, that immediately atter the death ef Cideon, the liraclites with their mual proncnefs t, i.dol.try, wo: fh pped B.al lerith, or the idol of B:rytuc,

San hunia- the town in which Sanchoniatho lived; and from this tho, circumftirce he concludes that there mult have been Sancroft. -ros that an intercourle between the Hebrews and Berytians, that in proeefs of time the latter people might aflume to themielves the Jerub-baal of the former, and hand down his actions to poferity as thofe of a priett in. flead of a great commander. All this may be true; but if fo, it amounts to a demonflration that the antiquity of Sanchoniatho is not fo high by many ages as that which is claimed for him by Philo and Porphyry, though he inay till be more ancient, as we think Vof - De Hiaf. fius has proved him to be*, than any other profane birec. hib.i. hiftorian whofe writings lave come down to us either car. r. entire or in fragments.

But granting the authenticity of Sanchoniatho's hiftory, what, it may be afked, is the value of his fragments, that we fhould be at any trouble to afcertain whether they be genuine remains of high antiquity, or the forgeries of a modern impoftor? We anfwer with the illuftrious Stillingfieet, that though thofe fragments contain fuch abfurdities as it would be a difgrace to reafon to fuppofe credible; though the whole cofmogony is the groffeft fink of atheifm; and though many perfons make a figure in the hiltory, whofe very exiftence may well be doubted; yet we, who have in our hands the light of divine revelation, may in this dungeon difcover many excellent relics of ancient tradition, which throw no feeble light upon many paffages of holy fcripture, as they give us the origin and progrefs of thatidolatry which was fo long the opprobrium of human nature. They furnith too a complete confutation of the extravagant chronology of the Chaldeans and Egyptians, and thew, if they be genuine, that the world is indeed not older than it is faid to be by Mofes. We fhall con. conclude the article by earneftly recommending to our readers an attentive perufal of Cumberland's Sanchoniasho.

SANCROFT (Wiliam), archbifhop of Canterbury, was born at Frefingfield in Suffolk in 1616; and admited into Emanucl college, Cambridge, in 1633. In 1642 be was elected a fellow; and, for refufing to take the covenant, was ejected from his fellowfhip. In 1660 he was chofen one of the univerfity preachers; and in 1663 was nominated to the deanry of York. In 166t he was inftalled dean (f St Punl's. In this fation he fet himfelf with unwearied diligence to repair the cathedral, till the fire of London in 1666 employed his thoughts on the more noble undertaking of rebuilding it, toward which he gave r 4001 . He alfo rebuith the deanry, and improved the revenue of it. In i6GS he was admitted archdeacen of Canterbury, on the king's prefentation. In 1677 , being now prolocutor of the convocation, he was unex pediedly advanced to the archb:lhopric of Canterbury. In 1678 he was comnitted to the tower, with fix oiher billops, for prefenting a juetition to the king againg reading the declaration of indulgence. Upon king Jimes Il.'s withdrawing him. felf, he concurred with the lords in a declaration to the prince of Orange for a free parliament, and due indulgence to the Proteftant diffenters. But when that prince and his conf \(r t\) were declared king and \(q\) neen, his grace xefufing to take the oaths to their majeflies, he was fufpended and deprived. He lived in a very private manner, till he died in 1693 . His learring, integrity, and picty: mada him an exalted ornarnent to the church.

He publifhed a volume in i2mo, intitled Modern Po-sandificalitiss, taken from Machiavel, Boagi., and other choice tion authors; Familiar Letters to Mr North, an 8vo pamphlet; and three of his fermons were printed together alter lis death.

SANCTIFICATION, the at of fanctifying, or rendering a thing huly. The reformed divines define fanstification to he an act of God's grace, by which a perfon's delires and affections are alienated from the world; and by which he is made to die to lin, and to live to righteounnefs; or, in other words, to feel an abhorrence of all vice, and a love of religion and virtue.

SANCTION, the authority given to a judicial ad, by which it becomes legal and authentic.

SANCIORIUS, a moft ingenious and learned phyfician, was a profeffor in the univerlity of Padua, in the beginning of the \(1 \gamma^{\text {th }}\) century. He contrived a kind of ftatical chair, by means of which, after eltimating the aliments received, and the fenfible difcharges, he was enabled to determine with great exactnefs the quantity of infenfible perfiration, as well as what kind of victuals and drink increafed or diminifhed it. On thefe experiments he erested a curious fyltem, which he publithed under the title of \(D e\) medicina flatica; of which we have an Engtifh tranfation by Dr Quincy. Sanctorius publifhed teveral other treatifes, which thewed great abilities and learning.

SANC'YUARY, among the Jews, allo cailed Sunctum fantorum, or Holy of holies, was the holieft and moft retired part of the temple of Jerufalem, in which the ark of the covenant was preferved, and into which none but the high-prieft was allowed to enter, and that only once a-year, to intercede for the people.

Some diftinguifh the fanctuary from the fanctum fanctorum, and maintain that the whole temple was called the fancluary.

To try and examine any thing by the weight of the fancluary, is to examine it by a juf and equal fcale; becaufe, among the Jews, it was the cuttom of the priefts to keep ftone weights, to ferve as ftandards for regulating ail weights by, though thefe were not at all different from the royal or profane weights.

Sanctuary, in the Ronifh church, is alfo ufed for that part of the church in which the altar is placed, encompafled with a rail or balluttrade.

Sanctuary, in ancient cuftoms, the fame with Asrium.

SAND, in natural hiftory, a genus of foffils, the chayacters of which arc, that they are found in minute concretions; forming together a kind of powder, the genuine particles of which are all of a tendency to one determinate thape, and appear regulor though nore or lefs complete concretions; not to be dillolved or difunited by water, or formed into a colierent mafs by means of it, but retaining their ngure in it; tranfpasent, vitrifiable by extreme heat, and not diffoluble in nor effervefingo with acids. Sands are fubject to be variouny blended, both with homogene and hetcrogene fubitances, as that of talks, Exc. and hence, as well as from their various colours, are fublivided into, 1. White fands, whether pure or mixed with other arenaccous or heterogeneous particles; of all which there are fever:l fpecies, differing no lets in the finenefs of their particles than in the difleteat degrees of colour, from a bright and fhining white, to a brownifh, gellowith, grecnith, \&e. white. 2. The red and reddifl fands, both pure and impure. 3. The yellow fands, whether pure or mixed, are alio very numerous. 4. The brown fands, diftinguifhed in the fame manner. 5. The black fandi, wheteof there are only two feccies, viz. a fine thining grcyill-black fand, and another of a fine thining reddifh.black colour. 6. The green kind; of which there is only one known fpecies, viz. a coarfe varicgated dunky arcen fand, common in Virginia.

Sand is of great ufe in the glafs-manufacture ; a white kind of fand being employed for making of the white glafs, and a coarfe greenifh-looking fand for the green glafs.

In agriculture, it feems to be the office of fand to make unetuous earths fertile, and fit to fupport veget: bles, \&sc. For earth alone, we find, is liable to coalefce, and gather into a hard coherent mafs, as appears in clay; and heing thus cmbodied, and as it were glued together, is no way difpofed to nourifh veget:ables. But if fucls earth be mixed with fand, its pores are thereby kept open, and the earth itfelf loofe, fo as thus to give room for the juices to afcend, and for plants to be nourifhed thereby. A regetable planted only in fand, or in a fat glebe, or in earth, receives little growth or increafe; but a mixture of both renders the malfs fertile. In effect, eath is in fornc meafure made organical by means of fand ; pores and !paces, fomething analogous to veffels, bcing thereby maintained, by which the juices may be conveyed, prepared, digelted, circulated, and at length difcharged. Common fand is, therefore, a very good : addition, by way of manure, to all forts of claylands; it warms them, and makes them nore open and loofe.

SAND-Bags, in the art of war. See Sacrs of Earth.
SAND-Eel, in ichthyology. See Ammodites.
Sand-Floods, a name given to the flowing of fard fo common in the deferts of Arabia. Mr Bruce gives the following accurate defeription of fome that he daw in travelling thicught that long and dreary defert. "At onc o'clock (fiys he) we alighted among fome acacia-trecs at Waadi el Halboub, havirg gone twenty-onc miss. We were here at once furprifed and terrified by a fight furcly une of the molt magnificent in the world. In that vatt expanfe of defert from weft and to northi-weft of us, we fawa number of prodigions pillats of fand at different diftances, at times moving with great celerity, at others falking on with a majellic flowners: at intervals we thought they were coming in a few minutes to nverwhelm us; and finall quantities of fand did actually mote than ence reach us. Again they would retreat fo as to be alnof out of fight, their tops reaching to the very cinuds. There the tops often icparated from the bodies; and thefe, once disjoined, dilperfed in the air, ard did not appear more. Sometimes they were broken mear the midule, as it flruck with a large cannon fh \(t\). About noon they legan to advance with confiderable fwitencfs upon us, the wind being vety Arong at north. Lleven of them ranged along fide of us about the difance of threc miles. The greatef diameter of the largeft afpeared to me at that diftance as if it would meafure ten fect. Tl.cy retired from is with a wind at fouth call, leaving an inppreffon upon my mind to which I c.in gire io name, though furely one ingredient in it was \{ear, with a coofiderable deal
of wonder and aftonifhment. It was in vain to think of fying, the fwifteß horfe or faftelt failing hip could Le of no ufe to carry us out of this danger; and the full perfuafion of this rivetted me as if to the fipot where I food, and let the camels gain on me fo much in my ftate of lamenefs, that it was with fome difficulty I could overtake them.
" The farme appearance of moving pillars of fand prefented themfelyes to us this day in form and difpofition like thore wo had feen at Waadi Haiboub, only they fecmed to be nore in number and lefs in fize. They came feveral times in a direction clofe upon us, that is, I bclieve, within lefs than two miles. 'Ihey began immodiately after fun-rife, like a thick wood, and almoof darkened the fun: his rays fhining through them for ne:tr an hour, gave them an appearance of pillars of fire. Our people now becanne defperate: the Greeks fhrieked out, and faid it was the day of judgment. Ifmael pronounced it to be hell, and the Tucorories, that the world was on firc. I afked Idris if ever he had before feen fucin a fight? He faid he had often feen thens as rerible, though never worfe; but what he feared moft was that extreme rednefs in the air, which was a furc prefage of the coming of the finmoon." See Simoon.

The flowing of fand, though far from being fo tremendous and hurtful as in Arabia, is of very bad confe. quences in Eritain, as many valuable pieces of land have thus been entirely lofl; of which we give the following inflances from Mr Pernant, together with a probable ineans of preventing them in fu:ure. "I have more than once (fays he), on the eaftern coalts of Scorland, obferved the calamitous flate of feveral estenfive trafts, formerly in a moft llourifhing condition, at prefent covered with fands, unftable as thofe of the deforts of Arabia. The parifl of Furvie, in the counts of Abcrdsen, is now reduced to two farnis, and above L. 500 a-year loft to the Eirol family, as appears by the oath of the factor in 1600 , made before the court of feffion to afcertain the minifter's faliry. Not a veftige is to be foen of any buildings, unlefs a fragment of the charch.
"The eftate of Conbin, near Forres, is another melancholy infance. This tract was once worth L. 300 a-ycar, at this time overwhelmed with fand. 'this frange inundation was fill in motion in 1769 , chiefly when a lirong wind prevailed. Its motion is fo rapid, that I have been affured, that an apple-tree has been fo covered with it in onc feafon, that only the very fummit appeared. This difitcfs was brought on :tbout nincty years ago, and was occafioned by the cutting down fome trees, and pulling up the bent or far which grew on tie fand-hills ; which at laft gave rife to the aft of 15 Gcorge II. c. 33. to prohibit the deftrution of this ueeful plant.
"I beg leave to fuggelt to the public a pofi'sle mears of putting a fop to thefe defruetive ravages. Providence hath kindly formed this plant to grow only in pure fand. Mankind was left to make, in after-times, an ar. plication of it futable to their wats. 'The fand-hills, on a portion of the lilint haic chores, in the parifh of Lharafa, are covered with it maturally, and kept firm in their phice. The Dutch polhaps owe the cxifte:ce of part at leal of their country to the fowing of it on the modile foinm, their fand-Lanks.
"Ify humane and amiable fiiend, the late Benj:nin

Stillingfieet, Efq; reccommended the fowing of this plant on the fandy wilds of Norfolk, that its matted ronts might prevent the deluges of land which that country experiences. It has been already remarked, that wherefoever this plant grows the falutary effects are foen oblerved to follow. A fingle plant will fix the fand, and gather it into a hillock; thefe hillocks, by the increafe of vegetation, are formed into larger, till \(b y\) degrees a barrer is made often againft the encroachments of the fea; and might as often prove preventative of the calamity in quellion. I camot, therefore, but rocommend the trial to the inhabitants of many parts of Nurth Britain. The plant grows in molt places near the fea, and is known to the Highlanders by the name of murab; to the Englifh by that of lentfar, mat-grafs, or marran. Linnæus calls it arundo arenaria. The Dutch call it belm. This plant hath Aiff and Tharp-pointed leaves, growing like a rulh, a foot and a half long: the roots both creep and penetrate deeply into their fandy beds: the ftalk bears an ear five or fix inches long, not unlike rye; the feeds are fmall, brown, and roundilh. By good fortune, as old Gerard obferves, no cattle will eat or touch this vegetable, alloted for other purpofes, fubfervient to the uie of mankind."

Sand-Piper, in ornithology. See Tringa.
SaND-Stome, a genus of ftones belonging to the order of faxa; and including all thofe which contift of fuch minute particles that they cannot eafily be difcerned by the eye. The fpecies enumerated by Cronftedt are,
1. Thofe cemented by a clay, of which there are two varieties; one with porcelain clay, the other with common clay. The former is met with in Sweden under the fratum of coal in a coal-mine in the province of Shone, and is very hard and refractory in the fire, the other is found in the inland of Gothland.
2. With lime, refembling mortar made with coarfe fand. There are two varieties, one confilting of tranfparent giey-coloured grains of quartz and white limeHone, the other of a loofe texture, hardening in the air; but having the particles too fine to be vatible. The former of thefe is found in Sweden, the latter in France and Livonia.
3. Sand-Itone having its particles bound together by an unknown cement. Of this there are four varieties; 1. Loofe; 2. Somewhat hard; 3. Compact; 4. Very hard; all of them found in different parts of Sweden.
\(\&\) Cemented by 1 ult of iron, found in the form of louic ftones in feveral places.

Cronfedt informs us that the greatelt part of fandftones contift of quarte and mica, being thofe fubftances which moft readily adnat of granulation without being reduced to puwder. Some years ago the Baron de Dietrich hewed a fingular variety of find-ftone at Paris. It conlifts of imall grains of hard quartz which Atrike lire with fleel united with fome micaceous particles. It is flexible and elaftic, the flexibility depending on the micaccous part and foltnets of the gluten with which the particles are cemented. This elattic tone is faid to have been found at Brazil, and brouglit to Germany by his excellency the ma:quis de Lavratio. There are alio two tables of white marlle, kept in the palace of Borghefe at Rome, which have the fame property. liut the farry particles of their fubfance, though tranfpatent, are rather folt, and may be ealily feparatced
by the nail. They effervefce with aquafortis, and there is alfo a fmall mixture of minute particles of talk Sandal, or mica.

Sand-ftones are of great ufe in buildings which are required to reflit air, water, and fire. Some of them are foft in the quarry, but become hard when expoled to the air. The luofe ones are mont ufeful, but the folid and hard ones crack in the fire, and take it polifh when ufed as grinditones. Stones of this kind ought therefore to be nicely examined belore they are emplojed for the ufual purpofes. Our author obferves that the working matons, or Anne-cutters, ought to wear a piece of frize or baize before their mouths, to preferve themfelves from a confumption which their bulinefs is otherwife apt to bring on. Limettone, however, is not obferved to have this effect.

To the lit of fand-fones Fabroni adds grititone, of greater or lefs hardnefs; molly of a grey, and fometimes of a yellowih colour, compofed of a liliceous and micaccous fand, but rarely of a fparry kind, with greater or letfer particles clofely connected with an argillaceous cement. It Atrikes fire with fteel, vitrifies in a ftrong fire, and is generally indiffoluble in acids. It is ufed for mill-ftones, whet-flones, and fometimes for filtering flones, as well as for building.

SANDAL, in antiquity, a rich kind of flipper worn on the feet by the Grcek and Roman ladies, made of gold, filk, or other precious ftuff; confilling of a fole, with an lollow at one extreme to embrace the ancle, but leaving the upper part of the foot bare.

Sandal, is alfo ufed for a thoe or flipper worn by the pope and other Romifh prelates when liey officiate. It is alfo the name of a fort of flipper worn by feveral congregations of reformed monks. This laft conffits of no more than a mere leathern fole, faftencd with latches or buckles, all the reft of the loot being left bare. The capuchins wear fandals; the recollects, clogs; the former are of leather, and the latter of wood.

Sandal. Wood. See Saunders.
SANDARACH, in natural hiftory, a very beantiful native foffil, though too often confounded with the common factitious red arfenic, and with the red matter formed by melting the common yellow orpiment.

It is a pure fubflance, of a very even and regular Atructure, is throughout of that colour which dyers term an orange fiarlit, and is confiderably tranfparent even in the thickeft pieces. But though, with refpest to colour, it has the advantage of cinnabar while in the mafs, it is vaftly inferior to it when both are reduced to powder. It is moderately hard, and remarkably heavy; and, when expofed to a moderate heat, melts and Hows like oil: if fet on fire, it burus very brikkly.

It is found in Saxony and Bohemia, in the copper and filver mines; and is fold to the painters, who find it a very fine and valuable red: but its virtues or qualities in medicine are no more afcertained at this time than thofe of the yellow orpiment.

Gum.SandARACH, is a dry and hard refin, ufually met with in looie granules, of the bignefs of a pea, a horfe-bean, or larger; of a pale whitith yellow colour, tranfparent, and of a refinous fmeli, brittle, very inflammable, of an acrid and aromatic tafte, and diffuling a very pleadant fmell when buaning. It is produced from a fipecies

Sondem：a－a fpecics of the juniper；（fee Jumiperus）．It flows on． グ21．s． \(\rightarrow\)－ \(1{ }^{j}\) from the \([\) trees in lot countries：bat the natives fromote its difharge by making incifions in the bark．

Sundarach is efteemed good in ciarrlicens and in hax． morlugies．

The varnifh－makers maie a lind of varnith of it，by d folving it in oil of turpentine or linfeed，or in furit of wine．

\section*{Foundod Sandarau．See Pousce．}

SANDEMANIANS，in ecclefallical hitory，a mo－ dern fest that rriginated in Scutland about the year 1－28；where it is at this time diftinguithed by the nime －1 Glufites，after its f innter Mr Joim Glafs，who was a minifter of the eftublithed church in hat kingdom；but being clarged witis a delign of fubverting the national covenant，and hupping the foundation of all nati nal whblithmen：s by tie kink judicatory，was expelled by lite lynod Trom the church of Scothond．His fentimeats ase fully explained in a ：can publifhed at that time， intitled，＂The Teftonsony of the King of Martyrs，＂ ard fererved in the firf volume of his works．In con－ fiequence of Mr Glats＇s expulion，his adherents formed themfilves into churcies，conformable in their inftitu－ tion and difcipline to what they apprehended to be the flan et the brit churches recurded in the New Tefta－ meat．Sonn atier the year 1755 ，Mr Kobert Sande－ man，an elder in one of thefe churches in Scotland， publified a Eeries of letters adJrefied to Mr Hervey，oc－ ca＇soned be his Tharon and Apaftio in which he endea－ sours to flow，that lis notion of faith is contraditory to the feripture account of it，and could only ferve to lad rien，profefiedly liolding the ductrines commonly call id Caluinj \(7 t\) ，to eftablith their own rightroufnefs t pon their frimes，inosurd feelings，and various acts of fith．In thele letters Mr Siandeman attempts to prove， sinat fath is neither more zor lefs than a timple atfent to the divine teftimony coneerning Jefus Chrift，record－ cdin the Nev＇l＇citament；and he mairtains，that the word fuilh，or lelief，is confantly uled by the apoftles 10 fignify shat is dencted by it i：l common difcourfe， si／．a perwation of the truth of any fropofition，and that there is no difference bexween telieving any common titimo：3y，and beleving the apofolic tellimony，cacept thit which refiles from the nature of the teftimony it－ 14ff．This lai the way to a contorery．among thefe Who verc catce Catronits，cancerning the mature of jultify：ng fu：h：and thole whoddopted Mr Sandeman＇s notion of it，and who took the denomination of Sude－ mathime，fornied thenfelves inet church order，in llift Ictowibip with the churches in Scothand，but holding 1：0 hins if communton with other churclacs．Dle chief opini ni and practices in which this fert differs fon chier C＇！rrllimn，arc，their weekly adminittration of the Lord＇s Supper ；their luve－featt，of which eve：y nember is nut only allowed but requited to pirtake， and which conlitt of their dining together at each cither＇s houfes in the interval between lat moning and atier－ roon fervice ；their kifs of charity ufed on this occ：－ fion，at the admilion of 2 new member，and at othe： limes，when they decm it to be neceniry or proper； Wheir weekly collcation before the Lurd＇s Sugper，fur the fupport of the poor，and detraying other expences； nuturn exhortation ；abtinence from blood and things frangled；walling each other＇s feet，the precept con－ cerning which，as well as other frocepts，they uador－
fand litcralls；community of goods，fo far as that every one is to confider all that t．e lias in his poffeffion and power as liable to the calls of the porr and church； and the unlawfulnefs of laying up treafures on easth， by fetting them apar：for any ditani，future，and un－ cettain ufe．They alhw of public and private diver－ fions，fo far as they are not conneded with circum－ fances really finful；but apprehending a lot to be fa－ cred，dapprove of playing at card，dice，太c．They maintain a pluality of clders，pators，or bifhors，in euch church；and the neceflity of the prefence of two clders in crery ant of diciphine，and at the adminitera－ tiven of the Irra＇s Supper．In the choice of thefe el－ ders，want of leaming，and engag ments in trade，sic． are no fufficier：cbjection；but iecond marrinecs di－－ qualify for the cflice；and they are ordat？ed by praỵcr and fafting，impulition of hands，and giving the right hand of fellowfhip．In their difcipline they are Arift and fevere；and think therrfelves obliged to feparate from the communion and worthip of ail fuch religious focieties as appear to them ro：to protis ilie fimple truth for their only ground cf hope，ard who do not walk in obedience to it．Whe fhall only add，that in every church tranfaction，they eftecm wranimity to be abfolutely neceffary．Irom this abftract of the account which they lave publithed of their tencts and prantices， it does not feem to be probable that their number thould be very confiderable．

SANDERS．See S．uviders．
SANDIVER，a whitifh falt，continnaily caf up from the metal，as it is called，whereof glafs is made；and， fivimming on its furface，is Rimmed off．

Sandiver is alfo plentifully thrown out ia the esup－ tions of volcanoes；fome is cf a fine white，and others ringed bluifh or yellowith．

Sandiver is faid to be detergent，and good for foul－ nelles of the fkin．It is alfo ufed by guilders of iron．

SANDIX，a kind of minium，or red－lead，made of cerufe，but much inferior to the true minium．

SANDOMIR，a city，the capital of a palatinate of the fame name，in Littic Poland，on the Viftula．The Swedes blew up the caltle in 1656 ；and here in 1659 ， was a dreadful battle between the Tartars and Ruffans． It is \(8+\) miles fouth－ealt of Cracew．Lat． 49.26 ． Long．20． 10.

SANDORICEM，in botany：A genus of the mo． noygnia order，belongirg to the decandrin claf，of plants；and in the natural method ranking under the \(23 d\) order，Trihillote．The calyx is quinquedentate；the peals five，and linear－flaped：the nefurium has ten dentre，on which the antherx grow；the fruit is a drupa， and five in namber，each of which has one feed．There is only one fecics，aiz．the indicum，a native of Afvica and the Eatt Indics．

SANDI＇U，or Sansoo，the vulgar name of one of the moit mighty risers in the world．The rame it generally goes by，and by which it is bot known，is that of Eur－ ram，antir．Of this mof majeftic body of waters ne have the following very animated accoun：in Mauria＇s Indiars Antoquibes is An objest equally novel and grand nuw clams our attention；fornovel，as not to Liwe been known to Europeans in the real ex：ent of its magniticence before ths year 1765 ，and jo awfully grand，that the aftonithed geographer，thinking the linguage of 1 ref：inadoquata to conver his conception，
sindpu, has had recourfe to the more expreflive and ewergetic Sandwich. languige of poctry: but

Dares fretch her wing o'er this enormous mafs Of rufhing waters; to whofe dread expanfe, Comtinuous depth, and wond'rous length of courfe, Our floods are rills.
"This fupendous olject is the Burrampoorer, a worl wh ch in Shanferit fignifies the fon of Brabma; for no meaner onigin conld be afigncd to to wonderful a progeng. This fupreme monarch of Indian rivers durives its fource from the oppotite fide of the fame mountain from which the Ganges iprings, and taking a bold fweep towards the ealt, in a line direnly oppotite tn the courfe of that river, wathes the vall country of Tibet, where, by way of diltinction, it is denmmated Sinpno, or the river. Winding with a rapid current tirrough Tibst, and, for many a leaguc, amidt dreary deffris and regions remote from the habitations of men, it waters the borders of the territory of Laffa, the refidence of the grand Lama; and then deviating with a cometars irregularity, from an eaft to a fouth ealt courfe, the mighty zuanderer approaches within 200 miles of the weftern frontiers of the vaft empire of China. From this point its more direet path to the ocean lay through the gulph of Siam; but with a defultory courfe peculiar to itelelf, it fuddenly turns to the welt through Alfam, and enters Bengal on the north-ealt quarter. Circling ronnd the weftern point of the Garrow mountains, the Burrampooter now takes a fouthern direction; and for 60 miles before it meets the Ganges, its fitter in point of origin, but not its rival in point of magnitude, glides majeftically along in a frcim which is regularly from four to five miles wide, and but for its frefhnefs, Mr Rennel fays, might pafs for an arm of the fea. About 40 miles from the ocean thefe mighty tivers unite their ftreams; but that gentleman is of opinion that their junction was formerly higher up, and that the accumulation of two fuch valt bodics of water, fcooped out the amazing bed of the Megna lake. Their prefent conflux is below Luckipoor; and by that confluence a body of frefh running water is produced, hardly equalled, and not exceeded, either in the old or the new hanifpherc. So ftupendous is that body of water, that it has formed a gulph of fuch extent as to contain iflands that ival the Ifte of Wight in fize and fertility; and with fuch refiflefs violence does it rufh into the ocean, that in the rainy feafon the fea itfelf, or at leaft its furface, is perfectly frefls for many leagues ont."

SANDWICH, a town of Kent, one of the cinque ports, and which has the title of an earldom. It conlift; of , wout 1500 houfes, moft of them old, and built wilh wood, though there are a few new ones built with brick and flints. It has threc long narrow firects, paved, and thirty crofs-Atreets or alleys, with about Goco inhabitints, but no particular manufactory. The town is walled round, and alfo fortified with ditches and ramparts; but the walls are much decised, on account of the harbour being fo choaked up with fand that ath.ip of roo this buthen cannot ist in. E. Long. 1 . 20. N. I..li. \(51.2=\).
S.womeri-Ifands, a group of inands in the South Sea, lying near New Ircland, were among the laf difcoverics of captain Cook, who fo mamed them in ho.
nour of the Earl of Sandwich, under whofe adminiftra. Findwich. tion thefe difonveries were made. They confit of eleven illands, extending in latitude from I8. 54. to 22. 15. N. and in longitude from 150.54 , to 160.24 . W. They are called by the natives, Owhyme, Mowee, Ranal, Morotoi, 'Tahoorowa, Woahoo, Atool, Noibecheow, Orechoun, Morotime, and TАноора, all inhabited except the two laft. An account of the molt remarkable of which will be found in their alphabetical order, in their proper places in this work. The climate of thefe inlands differs very little from that of the Wert Indics in the fame latitude, thongh perhaps more temperate ; and there are no traccs of thofe violent winds and hurricanes, which render the formy months in the Welt Indies fo drcadinl. There is aifo more rain at the Sandwich 1nes, where the mountainous parts being generally enveloped in a cloud, fucceffive flowers fall in the inland parts, with fize weather and a clear foy, on the fea thore. Heace it is, that few of thofe inconveniencies, to which many tropical countries are fubject, either from heat or moifturc, are experienced licre. The winds, in the winter months, are generally fiom ealt-fouth-eaft to north-eaft. The vegetable productions are nearly the fame as thofe of the other mands in this ocean; but the taro soot is here of a fuperior quality. The bread-fruit trees thrive not in fuch abundance as in the rich plains of Otakeite, but produce double the quantity of fruit. The fugar-canes are of a very unufual fize, fome of them meafuring eleven inches and a quatter in circumference, and having fourteen feet eatable. There is alfo a root of a brown colour, fhaped like a yam, and from fir to ten pounds in weight, the juice of which is very fweet, of a pleafint tafte, and is an excellent fubftitute for fingar. The quadrupeds are confined to the three ufual forts, hogs, dogs, and rats. The forms are alfo of the common fort; and the birds are beantiful and numerous, though not various. Goats, pigs, and European fceds, were left by captain Cook; but the poffefion of the goats foon gave rife to a contelt between two diftricts, in which the breed was entirely deftroyed. The inhabitants are undoubtedly of the fame race that polfeffes the illands fouth of the equator ; and in their perions, language, cuftome, and manners, approach nearer to the New Zealanders than to their lefi diftant neighbours, either of the Society or Friendly Iflands. They are in general about the middle fize, and well made; they walk very gracefully, run nimbly, and are capable of bearing very great fatignc. Many of both fexes have fine open countenances, and the women in particular have good eyes and teeth, with a fweetnefs and fenfibility of look, that render them very engaging. There is one peculiarity, characteriticic of every part of thefe iflands, that even in the handiomeft faces there is a fulnefs of the noftril, withont any flatnefs or fpreading of the nofe. They fuffer their beards to grow, and wear their hair after various faflions. The drefs of both men and women nearly refermble thote of New Zealand, and both fexes wear necklaces of fmall variegated ficils. Tatowing the body is pradiled by every colcony of this nation. The hands and arms of the women are allo very neatly marked, and they have the fingular cuftum of tatowing the tip of the tongue. Like the New Zcilanders, they have adopted the method of living together in villages, containing from on handred to two hundred
houtes,

Sundwich. houres, built pretty clofely together, without any order, \(\xrightarrow{n}\) and laving a winding path between them. They are generally flanked, towards the fea, with detached walls, which are meant both for fhelter and defence. Thefe walls confill of loofe ftones, and the inhabitants are very dexterous in fhifting them fuddenly to fuch places as the direction of the attack may require. In the fides of the hills, or furrounding eminences, they have alfo little holes, or caves, the entrance to which is alfo focured by a fence of the fame kind. They ferve for places of retreat in cafes of extremity, and may be defended by a fingle perfon againft feveral affailants. Their houfes are of different fizes, fome of them being large and \(\mathrm{ccm}-\) modious, from forty to fifty feet long, and from twents; to thirty broad; while others are mere hovels. The food of the lower clafs confifts principally of fifh and vegetables, to which the people of higher rank add the fleih of dogs and hogs. The manner of fpending their time admits of little variety. They rife with the fun, and, alter enjoying the conl of the cvening, retire to reft, a few hours after fun-fet. The making of canoes, mats, \&c. forms the occupations of the men; the women are employed in manufakuring cloth, and the fervants are principally engaged in the plantations and fith. ing. Their idle hours are filled up with various amufements, fuch as dancing, boxing, wrefling, \&ec. Their agriculture and mavigation bear a great refemblance to thofe of the South-fea iffands. Their plantations, which are fpread over the whole fea-coalt, confilt of the taro, or eddy-root, and fweet potatoes, with plants of the cloth-trees fet in rows. The bottoms of their canoes are of a fingle piece of wood, hollowed out to the thicknefs of an iuch, and brought to a point at each end. The fides confift of three boards, each about an inch thick, neatly fitted and lafhed to the bottom part. Some of their double canoes meafure 70 feet in length, three and a half in depth, and twelve in breadth. Their cordage, fifh-hooks, and filhing tackle, d:ffer but little from thofe of the other iflands. Among their atts mult not be forgotten that of making falt, which they have in great abundance, and of a good quality. Their inltruments cf war are fipears, daggers, clubs, and flings; and for defenfive armour they wear itrong mats, which are not eafily penetrated by fuch weapons as theirs. As the illands are not united under one fovercign, wars are Irequent among them, which no doubt, contribute greally to reduce the number of inhabitants, which, according to the proportion afigned to each inaml, does not exceed 400,000 . The fame fy fem of fubordination prevails here as at the other inands, the fame ablolute autherity on the part of the chiefs, and the fame unrefinting fubmilion on the part of the people. The government is likewife monarchical and heteditary. At Owhyhee there is a regular fociety of priefts living by thenfelves, and definct in all refpens from the reit of the people. Human facrifies are here frequent; sot only at the commencencent of a war, of any fignal enternifif, but the death of every cor liderable chicf cails for a repetition of thefe hor:id ritcs. Nowithftanding the irreparable lofs in the ceath of captain Cook, who was here murdered throurgh fudden refentment and violence, they are acknowledged to ba ot the moft mild and affectionate diffolition. They live in the utmolt harmony and friendilip with each other; and in hofpitality to ftrangers they are not exceeded Voz. XVI.
even by the inhabitar.ts of the Friendiy Iftands. Their natural capacity feems, in no refpect, below the common fandard of mankind; and their improvemems in agriculture, and the perfection of their manufactures, are certainly adequate to the circumfances of theis fituation, and the natural advantages which they enjoy.

SANDYS (Sir Edwin), fecond fon of Dr Edwia Sandys archbifhop of York, was born about 1561, and clucated at Oxford under Mr Richard Flooker, author of the Ecclefinatical Polity. In 1581 he was collated to a prebend in the cathedral of Yozk. He travelled into forcign countrics; and, upos: his return, grew famous for learning, prudence, and vi:tue. While he was at Paris, he drew up a tract, publithed under the title of Europe Speculum. In 1602, he refigned his prebend; and, the year following, was knighted by king James L . who employed lim in feveral important affiirs. He was dexternus in ans great employment, and a good patriot. However, oppofing the court with vigour in the parliament held in 1621 , he, with Mr Seldon, was committed to cuftody for a month. He died in 1629, having bequeathed 1500 1. to the univerfity of Oxford, for the endowment of a metaphyfical lecture.
Sasiny (George), brother of the foregoing Sir Edwin, and youngeft fon of arclibihop Sandys, was born in 1577 . He was a moft accomplifhed gentleman; travelled over feveral parts of Europe and the Eatt ; and publifhed a relation of his journey in folio, in 1615 . He made an clegant tranflation of Ovid's Metamorphofes; and compoted fome poetical pieces of his own, that were greatly admired in the times of their being written. He alfo paraphrafed the Pfalms; and has lett behind him a Trannlation, with Notes, of one Sacred Drama written originally hy Grotius, under the title of Cbriflus Patiens; on which, and Adamus Exul, and Mafenius, is founded Lauder's impudent charge of plagiarifm againt the immortal Milton. Our authot became one of the privy chamber to Charles I. and died in \(16+3\).

SAN Fernando, near the entrance of the Golfo Dolce, in 15 degrces 18 minutes north latitude, has lately been fortifice by the spaniards, with an intent to curb the Mufquito-men, logwood-cutters, and haty-men. It is a very good harbour, with \(f_{2}\) fe anchorage from the north and eaft winds, in eight futhoms water.

SANGUIFICATION, in the animal cconomy, the converfion of the chyle into true blood. See Blond.

SANGUINARIA, nLOOD-wORT, in botany: A genus of the monngynia order, belonging to the polyandria clafs of plants; and in the natural method ranking under the 27 th order, Rbeexde. The corclla is octopetalous ; the calyx diphyllous ; the filiqua ovate and unilocular. There is only one fpecies, viz. the canadenfis, a native of the northern parts of Americ:, where it grows plentifulty in the wuods; and in the fipring, before the leaves of the trees come rut, the furface of the ground is in many places covered with the fowers, whicla have fome refemblance to the wood anemore; but they have thort naked pedicles, each fupporting one flower at cop. Some of there fowers will have so or 1 petals, in that they appear to have a double sange of leaves, which has wecalicned their being termed donble flazuers; but this is only accidental, the fume

Sanguiforba, Sanhedrim. \(\underbrace{-}\)
roots in lifferent years producing different flowers. The plant can bear the open air in this country, but fhould be placed in a loofe foil and fheltered fituation, not too much expofed to the fun. It is propagated by the roots; which may be taken up and parted, in September, every other jear. The Indians paint themfelves yellow with the juice of thefe plants.

SANGUiSORBA, greater whld burnet, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the \(54^{\text {th }}\) order Mifcellanea. The calyx is diphyllous; the germen fituated betwixt the calyx and corolla. The moft remarkable fpecies is the officinalis, with oval fpikes. This grows naturdlly in moift meadows in many parts of Britain. The falks rife from two to three feet high, branching towards the rop; and are terminated by thick oval fpikes of fiowers of a greyif brown colour, which are divided into four fegments almoft to the bottom. Thefe are fucceeded by four oblong cornered feeds. The leaves of this fort are compofed of five or fix pair of lobes placed along a midrib, terminated by an odd one. Thefe are heartthaped, deeply fawed on their edges, and a little downy on their under fides. The cultivation of this plant has been greatly recommended as food to cattle. See Agricuiture, no \(4^{8,}\), 8 c.

SANHEDRIM, or Sanhedrin, from the Greek word sursfprop, which fignifies a council or affembly of perfons fitting together, was the name whereby the Jews called the great council of the nation, affembled in an apartment of the temple of Jerufalem to determine the mof important affairs both of their church and tate. This council confifted of feventy fenators. The room they met in was a rotunda, half of which was bu. \(t\) without the temple, and half within; that is, one femicircle was within the compafs of the temple; the other femicrele, they tell us, was built without, for the fenators to fit in; it being unlawful for any one to fit down in the temple. The Naff, or prince of the fanliedrim, fitt upon a throne at the end of the hall, having his deputy at his right hand, and his fub-deputy on his left. The other fenators were ranged in order on each fide.

The rabbins pretend, that the fanhedrim has always fubfifted in their nation from the time of Mofes down to the deftruction of the temple by the Romans. They date the eftablifhment of it from what happened in the svildernefs, fome time after the people departed from Sinai (Numb. xi. 16.), in the year of the world 2514 . Mofes, being difouraged by the continual murmurings of the Ifraelites, addreffed himfelf to God, and defired to be relieved, at leaf, from fome part of the burden of the government. Then the Lord faid to him, "Gather unto me 70 men of the elders of Ifrael, whom thou knoweft to be the elders of the people, and offcers over them; and bring them unto the tabernacle of the congregation, that they may ftand there with thee: And I will come down and talk with thee there; and I will take of the fpirit which is upon thee, and will put it upon them; and they thall bear the burden "f the people with thee, that thou bear it not thyfelf alonc." The Iord, therefore, poured out his fpirit upon thefe men, who began at that time to prophecy, and have not ceafed from that time. The fanhedrim was compofed of 70 counfellors, or rather 72 , fix out
of each tribe; and Mofes, as prefident, made up the Sanhedrin. number 73. To prove the uninterrupted fucceffion of the jadges of the fanhedrim, there is nothing unattempted by the partifans of this opinion. They find a proof where others cannot fo much is perceive any appearance or fladow of it. Grotius mas be confulted in many places of his Commentaries, and in his firft book De jure belli E pacis, c. 3. art. 20. and Silden de Synedriis vetcrum Hebrcorum. Alfo, Calmet's Differtation concerning the polity of the ancient Hebrews, printed before his Comment upon the Book of Numbers.

As to the perfonal qualifications of the judges of this bench, their birth was to be untainted. They were often taken from the race of the prielts or Levites, or out of the number of the inferior judges, or from the leifler fanhedrim, which confifted only of 23 judgesThey were to be fkilful in the law, as well traditional as written. They were obliged to fludy magic, divination, fortune-telling, phyfic, aftrology, arithmetic, and languages. The Jews fay, they were to know to the number of 70 tongues; that is, they were to know all the tongues, for the Hebrews acknowledged but 70 in all, and perhaps this is 1 great a number. Eunuchs were excluded from the fanhedrim, becanfe of their cruelty. ufurers, decrepid perfons, players at games of chance, fuch as had any bodily deformities, thofe that had brought up pigeons to decoy others to their pigeonhoufes, and thofe that made a gain of their fruits in the fabbatical year. Some alfo exclude the high-prieft and the king, becaufe of their too great power; but others will have it, that the kings always prefided in the fanhedrim, while there were any kings in Ifrael.Lafly, it was required, that the members of the fanhedrim fhould be of a mature age, a handfome perfon, and of corfiderable fortune. We fpeak now according to the notions of the rabbins, without pretending to warrant their opinions.

The authority of the great fanhedrim was vally extenfive. This council decided fuch caufes as were brought betore it by way of appeal from the inferior courts. The king, the high-prieft, the prophets, were under its jurifdition. If the king offended againft the law, for example, if he married above 18 wives, if he kept too many horfes, if he hoarded up too much gold and filver, the fanhedrim had him Itripped and whipped in their prefence. But whipping, they fay, among the Hebrews was not at all ignominious; and the king: bore this correction by way of penance, and himfelf made choice of the perfon that was to exercife this difcipline over him. Alfo, the general affairs of the nation were brought before the fanhedrim. The right of judging in capital cafes belonged to this court, and this fentence could not be pronounced in any other place, but in the hall called Lafchat-baggazith, or the ball pared with fones, fuppofed by fome to be the Aitosparau, or pavement, mentioned in John xix. 13. From whence it came to pafs, that the Jews were forced to quit this hall when the power of life and death was taken out of their hands, 40 years before the deftruction of their temple, and three years before the death of Jefus Chrif. In the time of Mofes this council was held at the door of the tabernacle of the teflimony. As foon as the people were in poiffefion of the land of promife, the fanhedrim followed the tabernacle. It was kept fucceifively fively a: Gilgal, at Shilnh, at Ki:jata jatim, at Nob, at Gii)con in t.ie houfe of Obededom; and latty, it was fululed at Jerufalem, till the Dabylon:fa captivity. Isuring the captivity it was bept upat Babyion. After Hecresurn from Datyion, it continned at Jeabiacm to the time of the sicario, or Alfaling. Then findurg that thefe proflifra:c wectons, wh, fe romber increafed every day, fometinnes efoaped punithment by the fowour of the pretident ir judises, it was removed to F'arooth, which were ceriain abounis fituatch, as the rabbirs teil ue, upan the mouns:ain of the temple. From the:ce they came down into the rity of Jertiflom, withdrateing themfelves by degrees frem the semple. Aracrwards they removed to Janiria, thence to Jerich:o, io Lizyat. to sephatwam, to leat.ta::in?, to Sephoris, laft rall to Tiberias, where iliey continuch :n the tume of their utier cutinution. A: :id this is the aceourt the Jews themblves give us of the Sanhedrim.

But the learned do not agrec with thom in al! this. Father Petau fixcs the beyinitiag of the finhedrinn not thll Gabinius was fovern or of Judea, who, aceotding
 ties of Jauea; at Jerulalem, at Gadara a" A nathus at Jelicho, and at S.phata no Sophers, an city di Galike. G.otius places the oligin ch the fabiactrim under INofes, as the rabbers do; lime he makes it de:e: anine at the berinn ng ni Herod's reign. Mr Pafnage at Siff though hat dic fathedrim began üder Gabiaius; but decin ards he places it under Judas Maccabæus, nt under his brether Jonathan. We fee indeed, under Jo. ma:han Muccabxus, ( 1 Micc. xii. G.), in the year \(3^{8 G 0}\), that the fenate with the highoprief fent an embaffy to the Romar.s. The rabbins laty, that Alesander janneue, king of the Jews, of the race of the Afmorxans, appeared before the fanhedrim, and claimed a right of fitting there, whether the fenators would or not. Jefephus informs us, that when Herod was but yet governor of Galilee, he was fummoned before the icnate, whore he appeared. It mult be therefore acknowledged, that the fanhedrim was in being before the reign of Hernd. It was in being afterwards, as we find frim the Gofpel and from the Aets. Jefus Chrift in St Matchew ( v .22 .) diftinguthes two tribunals"Wheriever is angry with his brother without a caufe fhuli be in danger of the judgment." This, they fay, is the tribunal of the 23 judges. "And whinoever thall lay to bis brother Raca, thall be in danger of the council:" tbat is, of the great fanhedrim, which had the right ot iite and death, at leaft gencralls, and before this tieht was taken away by the Romans. Some think hat the jurildiation of the council of 23 exiendea to life and death alfo; but it is cortain that the fanhedrim was fuperior to this council. See alfo Mark xiii. 2. xiv. 55 . xv. 1. ; Luke xaii. 52 , GG. ; John xi. 47. ; Actsiv. 15. V. 21. where mention is made of the 15nedtion, ar fanliedrim.

From all this it may be concluded, that the origin of the Canledtim is involved in uncertainty; for the council of the 70 elders eftabliftied by Mofes was not what the Hebrews underfand by the name of fanhedrim. beides, we cannot perceive that this cfablifhment fubfifted citticr under Jothua, the judges, or the kings. We firut tothing of \(i:\) after the captivity, till the time of Jonat.an Mar c:absus. The tribunals ereated by Gabinins were very diferent from the fanhedrim, which was the Vus. XVI.
fupreme ccart of judienc:ac, and fived at \(]\) anin \(m\), sihercas Gabinius ettablithed fise at five dinterent ini \(\cdots\). 1, afle, is is certain that this fenatc w. \(s\) in being in th: tirne of Jehas Chrif; but the Jewes themfeives irform us that they lad no loneger then the power of life and deith (Juhn sriii. 31.)

SAN. JACKis, a pecepie inimbine tic Curdifan, or Jertan watutais, fubthing chiefly by phodur, and the teanty piatance afforded the their nam mourvainnus countr:" "The", were much réaced (ruys Mir loes) If the he ballas Aclime of Bugdat, who purfien then in perfon to their fubicrrarean retreats, and deforyed many by the ford, and carried off great nu:mbers nf rifneres. who werc fold for flaves." Nu:withRanding this cl:cch. ia the yer 1758, they were again become 6 daring tiat they would attack caravansol 7 Co men, and fumetimes cariy ail off. 'Thejare faid to be worthit pers of the evil principle.

SAN Juan DE YeRTO R:CO, Whally called \(P\) rio Rio, rane of the Wer Tndia inads oblonging in Sipain, is lituated in abont 18. IJ. 2.at. and beween \(G_{5} \cdot 3^{\prime \prime}\). and : 4.5. Wr Lane and ie abont 40 lesgues long and 20 hrod. The ifland is bempifuly diverfified with wonds, yalleys, and plains, and is cxiremely fertile. It it well watered with ifrings and rivers, abounds with meadows, is divided hy a ridge of mount ins rumning from calt in welt, and has a lathour fo ifacinus that the larget flips n:ay lie in it wiha fafe:y. Before the arrival of the Spaniards it was inhabited by 4 cer 500,000 people, whe, in a few years, were extirpaited by its mercilefs conquerors. Raynal fays, that is whole inlabitants amounts at prefertorily to 1,00 Spaniards. Mefoen, and Mulatioes, and abnut 3200 negroes. Thats one of the finerl illands in the Wert Indies has been depofulated by the crnelty, and left uncultivated by the indolence, of its foffeffors. But it is the appointment of Providence, who feldom permits flagrant crimes to pafs anpunifhed, that powerty and wretchedaefs flould be unifnrm cenfequences of opprefiion.

SANICULA, Savicle, or Selflienl, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants ; and in the natural method ranking under the 45 th order, Umbellatix. The umbels are clofe together, almon in a round head; the fruit is fcabrous; the flowers of the dik rbortive. There are three fpecies, viz. the canadenfis, marilnndica, and curopax, found in many parts both ot Scotland and Eingland. This plant was long ceiebrated inr its healing virtues: but it is now meally difeeg. Ided.

SANIDILA, in natural hiftory, the name of a sisnus of folfils of the clais of the felenite, but neither of the thumboidal nor columnar kinds, nor any other: way difinguifhable by its exiernal fynre ; being macle up of feveral plain flat plates.

SANIES, in medicine, a ferous putrid matter, ifluing from wounds. It differs from pus, which is chicker and whiter.

SANNAZARIUS (James), in Latin figias Cincenis Samnazarius, a celebrated Latin and lation pnet, born at Naples in \(145^{8}\). He by his wit ingratiated himfelf into the favour of king Freleric: and, when that prince was dethroned, attended him ints) France, where he flaid with him till his death, which happened in 1504. Sannazarius then returned into Italy, where he applied himfelf to polite literature, and pariicularly

Fonta. to Iatin and [talian poetry. Itis gay and facetious rumorar made him iught for by all companies; but he Was to amf sed at the news that Phillibert prince of Omage, zeneril of the en:perer's army, hat demo. lifhed his country-houfe, that it hrew him into an illr.efs, of which lee died in 1530 . It is liid, that being informed a few days befora his ceath, that the prince of Orange wa, hilled in batte, he called out, "I thall die conterited, fince Mars has punilhed this barbarous enemy of the Mufe." He wrute a great number of Irdian and Latin poems: among thoie in Latin, Liis De Partu \(I^{r}\) rgin's and Eclogues are chiefly eftcemed; and the molt celebrated of his Italian pieces is his Aisulatio.

SANTA Cruz, a large ifland in the South Sea, and one of the molt confiderable of thole of Solomun, Leing about 250 miles in circumference. W. Long. 130. O. S. Lar. : 0.21.

Staret Cruz, or St Croox, a frall and unhealthy inhas, lituated in about \(\sigma_{t}\) degrees welt longitude and is no:th latitude. It is about eighteen leagues in length, and from three to four in breadth. In \(16 .+3\)

Raynal's
Hitory of the Eaft and Well rodics. vol. sth, D. 298. it was iahabited by Dutch and Englith, who loon be. cume enemies to each cther; and in 1650 ware buth driven cut by 1200 Spaniards, who arrived there in five thips. The tiumph of thefe latted but a few months. The remains of that numerous body, which were lelt for the defence of the ifind, furrendered without refiltance to 160 Frenth, who had embarked in 165 , from St Chritopher's, to make themelves matters of the illand.

Tl.ele \(x\) w it habitants lof no time in making themSelves acquainted with a country fo much difputed. O:1 a loil, in other refpeats exce lent, they fount only one siver of a moderate fize, which, gliding gently almolt on a level with the fea through a flat country, furnifhed only a brackifh water. Two or three frings, which they found in the innermoft part of the ifland, made but feeble smends for this defect. The wells were for the moll part dry. The confrudion of relervoirs required tims. Nor was the climate more inviting to the new inhabitants. The inland being flat, and covered with old trees, fcarce afforded an opportunity for the winds to carry of the poilonnus vapours with which its moraffes clogged the atmofphere. Thete was but one remiedy for this inconvenience; which was to burn the woods. The French fet fire to them wrhout delay; and, getting on board their fhips, became fpectators from the fea, for feperal months, of the conifiagration they had raifed in the ifland. As foon as the flames were extinguifhed, they weut on fhore again.

They found the foil fertile beyond belief. Tobatco, cotton, arnotto, indign, and lugar, flowihed equally in it. So rapid was the progrefs of this colony, that in is jears from its commencement there was upon it 822 white perfons, with a proportionable number of llaves. It was rapidly advancing to profperity, when fuch obflacles were thrown in the way of its attivity as made it decline again. This decay was as fudden as its rife. In 1696 there vere no more than 147 men, with their wives and children, and 623 blacks remaining; and thefe were tranfported to St Domingo.

Some olfeure individuals, fome writers unacquainted with the views of government, whth their fecret nego-
tiations, with the charatier of their minifers, with the iaterefts of the protectors and the protected, who flatter themfelves that they can difcern the reafon of events amonglt a multitude of important or fivolous caufes, which may have equally occalioned them; who do not conceive, that among all the canles the mof natural may pollibly be the larthell from the truth; who after having read the news, or jurnal of the day, with profound attention, decide as peremptorily as if they had been pheed all their lifetime at the helon of the flate, and had affilted at the council of kings; who are never more deceived than in the fe circumf ances in which they difplay fome fhare of penetration; writers as abfurd in the prailes as in the blame which they beftow upon nations, in the favourable or urfavourable opinion they form of minitteridl operations : thele idle dreamers, in a word, who think they are perfons of importance, becaule their attention is always engaged on matters of confequence, being convinced that ecurts are always governed in their decilions by the mott comprehenlive views of profound policy, have fuppoled that the court of Verfailles had neglected Santa Cruz, merely becaufe they wihhed to abandon the fmall iflands, in order to mite all their frength, induftry, and population, in the large ones ; but this is a miftaken notion. This determination arofe from the farmers of the revenue, who found that the contraband trade of Santa Cruz with St Thomas was detrimental to their inierets. The fpirit of finance hath in all times been injurious to commaterce; it bath deftroyed the fource from whence it fprang. Santa Cruz continued without inhabitants, and without cultivation, till 1733 , when it was fold by France to Denmark for 30,7501 . Sonn alter the Danes built there the fortrefs of Chititiantadt. Then it was that this northen power feemed likely to take deep root in America. Unfortunarely, the laid her plantations under the yoke of exclufive privileges. Indufrious people of all feats, particularly Moravians, Arove in vain to overcome this great difficulty. Many attempts were made to ceconcile the interefts of the colonifts and their oppreffors, but without fuccefs. The two parties kept up a continual fruggle of animofity, not of indultry. At length the government, with a moderation not to be expected from its conftitution, purchaled, in 175 , the privileges and effects of the company. The price was fixed at L. 412,500, part of which was paid in ready mones, and the remainder in bills upon the treafury, bearing interelt. From this time the navigation to the inlands was opened to all the fubjeets ot the Danifh dominions. Of \(3+5\) plantations, which were feen at Santa Cruz, 150 were covered with fugar caner, and every habitation is limited to \(30=0\) Danilh feet in length, and 2000 in breadth. It is inhabited by \(213^{6}\) white mea, by \(22,2+4\) flaves, and by 155 freedmen.

Santa Chuz, in Teneriff. See Teneriff.
Sinta Cruz, a town of Africa, on the coalt of Bar. bary, and in the province of Suez and kingdom of Morocco, with a harbour and a fort. The Moors took it from the Portuguefe in 1536 . It is feated at the extremity of Mount Atlas, on the Cape Aguer. W. Long. 10. 7. N. Lat. 30. \(3^{8 .}\)

Santa Ciruz de la Sierra, a town of South America, and capital of a province of that name in Pert, and in the audience of Los Charcas, with a bilhop's

Santa, Santalum.
fee. It is feated at the foot of a mountain, in a country abounding in good fruits, on the river Guapy. W. Long. 59. 35. S. Lat. 20.40.

Sanfa Fe de Bogota, a town of South Amcrica, and capial of New Granada, wi:h an archbilhop's fee, a fupreme court of juftice, and an univerfity.

The city fituated a: the foor of a feep and cold mountain, at the entrance of a vaft and luperb plain. In 1774 it contained 1770 houfes, \(32+5\) familics, and 16,233 inhabitants. Population muft necelfirily inereafe there, fince it is the ie.t of government, the place where the coin is ftruck, the faple of trade; and laft1 y , fince it is the refidence of an arctibilhop, whofe immediate jurifdiction extends over 3 : Spanifh villages, which are called towns; over 195 Indian colonies, anciently fubdued; and over 28 miffions, eftablifhed in modern times. This archbillinp hath likewie, as metropolitan, a fort of infpection orer the diocefes of Quito, of P.ınama, of Caraceas, of Sc Martha, and of Carthagen. It is by this laft place, though at the diftance of 100 leagues, arid by the river Magdalena, that Santa Fe kecps up its communication with Europe. There are filver mines in the monrtains about the city. W. Long. 60. 5. N. Lat. 3.58.

SANTALIJM, in botany: A genus of the monogynia order, belonging to the oftandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is fuperior; the corolla monopetalous; the flamina placed in the tube; the figma is fimple; the fruit a berry.

The fantalum, or fanders, grows to the fize of a wal-nut-tree. Its leaves are entire, oval, and placed oppofite to each other. Its flower is of one fingle piece, clarged with eight ftamina, and fupported upon the pitil, which becomes an infipid berry, refembling in form that of the laurel. Its wood is white in the circumference, and yellow in the centre when the tree is oid. This difference of colour conftitates two linds of fanders, both employed for the fame purpofes, and having equally a bitter tafte, and an aromatic fmell. With the powder of this wood a pafte is prepared, with which the Chinefe, Indians, Perfians, Arabians, and Turks, anoint their bodies. It is likewife burnt in their houfes, and yields a fragrant and wholefome fmell. The greatel quantity of this rood, to which a harp and attenuating virtue is afcribed, remains in India. The red finders, though in lefs eftimation, and lefs generally ufed, is fent by preference into Europe. This is the produce of a different tree, which is common on the coilt of Coromandsl. Some travellers confound it with the wood of Caliatour, which is ufed in dyeing.
The fantalum album, or white fanders, is brought from the Eaft Indies in billets about the thicknefs of : man's leg, of a pale whitith colour. It is that part of the yellow fanders wood which lies next the bark. Great part of it, as met with in the fhops, has no fmell or tafte, nor any fenfible quality that can recommend it to the notice of the phylician.
The fantalum album, or yellow fanders, is the interior part of the wood of the fame tree which furnilies the former, is of a pale yellowih colour, of a pleafant fmell, and a bitterifh aromatic tafte, accompanied with an agrecable kind of pungency. This elegart wood might undou'tediy be applied to valuable medical fur-
pnfes, though at prefent very rarely ufcd. Dittilled with water, it yields a fragrant elfential ril, which thickens in the cold into the confiftence of a balfam. Digefted in pure firit, it imparts a rich yellow tincture; which being committed to diftillation, the fpirit arifes without bringing over any thing confiderable of the flavour of the fanders. The refiduum contains the virtues of fix times its weight of the wood. Hoffman looks upon this extract as a medicine of fimilar virtues to ambergris; and recommends it as an excellent reft). rative in great debilities.

SANTAREN, a handfume town of Portugal ir. Enremadura, feated on a mountain near the river Tajo, in at country very fertile in wheat, wine, and oil. They get in their harvett here two months after theyhave fown their corn. It was taken from the Mocrs in 1447. W. Long. 7. 45 . N. Lat. 36. 12.

SANTAUGUSTINE. See Augustine.
SANTEN, a town of Germany, in the circle rof Weftphalia, and in the duchy of Cleves. It has a handfome church belonging to the Roman Catholics, wherein is an image of the Virgin Mary, which ther pretend performs a great many miracles. Here the tine walks begin that run as far as Wefel, from which it is five miles dift.int to the north-weft. E. Long. G. \(33 . \mathrm{N}\). Lat. 5 t. 38.

SANTERRE, a fmall territory of France, in \(\mathrm{P}_{\mathrm{i}}\) cardy ; bounded on the north by Cambrefis, on the eaft by Vermandois, on the wett by Amicnois, and on the fouth by the river Somme. It is very fertile, and the capital town is Peronne.

SANTEllil, or rather Santeul (Juhn Baptift de), in Latin Santolius Fifforinus, an excellent Latin poet, was born at Paris in 1630 . Having finifled his fudies in Louis the Great's College, he applied himfelf entircly to poetry, and celebrated in his verfe the praifes of feveral great men; by which he acquired univerfal applaufe. He enriched Paris with a great number of irferiptions, which are to be feen on the public fountains, and the monuments confecrated to pofterity. At length, fome new hymns being to be compofed for the Breviary of Paris, Claude Santeuil his brother, and M. Befluet, perfuaded him to undertake that work; and he fucceeded in it with the greatert applaufe. On which the order of Cingny defiring him to compofe fome for their Breviary, he complied with their requeft ; and that order, out of gratitude, granted him letters of filiation, with an annual penfinn. Santenil was earefled by all the learned men of his time; and had for his admirers the two p:inces of Condé, the father and fon, fron: whom he frequently received favours. Louis XIV. alio gave him a proof of his etteem, by bettowing a pontion apon him. He atiended the duke of Bourbon to Dijon, whan hat prince went thither in order to hold the liates of Burgundy; and died there in \(\mathbf{1 6 9 \%}\), as he was preparing to return to Paris. Befides his Latin hymns, he wote a great number of Latin poems, waich bave ail the fire and marks of genius difcover.tle in tace works of grcat piceis.

To Santeuil we are indebted fer many fine cherrhlymms, as abovementioned. Sanieuil read the verics he made for the irhabitants of haven with ..ll the agitations of a demenias. Defreaus faid he was the

\section*{SAN \\ [ \(65 t\) ]}

La Bruyere has painted the charater of this fingular and truly original poet in the mof lively colours. " Image a man of great facility of temper, complaifant and docile, in an inftant violent, choleric, paffion. ate, and capricious. A man fimple, credulous, playful, volatile, puerile; in a word, a child in gray hairs: but let him collect linifelf, or rather call forth his interior ganius, I venture to fay, without his knowledge or privacy, what fallies! what elcvation! what images! what latinity! Do you fpeak of one and the fame perfon, you will afk? Yes, of the fame; of Theodas, and of him alone. He thrieks, he jumps, he rolls upon the ground, he roars, he ftorms; and in the midft of this tempelt, a flame iffues that thines, that rejoices. TVithout a figure, he rattles like a fool, and thinks like a wife man. He utters truths in a ridiculous way ; and, in an idiotic manner, rational and fenfible things. It is altonifhing to find good fenie difclofe itfelf from the bofum of buffoonery, accompanied with grimaces and contortions. What flall I fay more? He dues and he fays better than he knows. Thefe are like two fouls that are unacquainted with each other, which have each their turn and feparate functions. A feaiure would be wanting in this extraordinary portrait, if I omitted faying, that he has at ouce an infatiable thirtt for praife, ready to throw himielf at the mercy of the critics, and at the bottom fo docile as to profit by their cenfure. I begin to perfuade myfelf that I have been drawing the portraits of two different pertons: it would not be impoffible to find a third in Theodas; for he is a good man, a pleafant man, an excellent man."

This poet ought not to be confounded with Claude de Santeuil, his brother, a learned ecclefiaftic, who alfo wrote feveral hymns in the Paris Breviary under the name of Santolius Maglioranus, a name given him from his having lived a long tume in the feminary of St Magliore at Paris, in quality of fecular ecclefiaftic. He was efteemed not only for his poetical abilities, but alfo for his profound erudition atd his exemplary piety. He died at Paris, in 1684 , aged 57. He wrote feveral other pieces of poetry, befides his hymns, which are printed with his brother's works.

SANCILLANE, a fea-port town of Spain, in the province of Afturias, of which it is the capital. It is feated on the fea-coaft, 55 miles eatt of Oviedo, and 200 north-weft of Madrid. W. Long. 4. 33. N. Lat. 43.30 .

SANTOLINA, lavender-cotton, in botany: A genus of the order of polygamia æqualis, belonging to the fyngenefia clafs of plants ; and in the natural method ranking under the 49 th order, Compofitu. The receptacle - paleaceous; there is no pappus; the calyx imbricated and hemifpherical.

The mot remarkable fpecies are, I. The chamacyparifus, or common lavender-cotton, which has been long known in the Englifh gardens; it was formerly tilled abrotanum femina, or fomale foutbernwood, and by the corruption of words was called brolany by the marketpeople : it grows naturally in Spain, ltaly, and the warm pats of Europe. This hath a ligneous falk, dividing into many branches, garnifled with flender hoa-
ry leaves, that are four ways indented, and have arank, Santolind. flrong, odour when handled. The branches are terminated by a fingle flower, compofed of many hermaphrodite florets, which are fiftular, cut into five parts at the top, of a fulphur colour, and are included in one common fcaly empalement, having no borders or rays. There are fucceeded by fmall, oblong, ftriated feeds, which are feparated by fcaly chaff, and ripen in the empalement; the plants love a dry foil and a theltered fituation. 2. The villofa, with woolly leaves, has a fhrubby ftalk, which branches out like the former, but the plants feldom grow fo tall. The branches are garnifhed very ciofely below with leaves flaped like thofe of the other fort, but fhorter, thicker, and whiter; the flowers are much larger, and the brims of the forets are more reflexed; they are of a deeper fulphur colour than the other. It grows naturaily in Spain. 3. The decumbens, with linear leaves, is of lower ftature than either of the former, feldom rifing more than 15 or 16 inches high. The branches fpread horizontally near the ground, and are garnifhed with fhorter leaves than either of the former, which are hoary and finely indented; the flalks are terminated by fingle flowers, of a bright yellow colour, which are larger than thofe of the firt fort. 4. The virens, with very long linear leaves, rifes higher than either of the former. The branches are more diffufed ; they are flender, fmooth, and garnifhed with very narrow long leaves, which are of a deep green colour, but two ways indented; the flalks are flender, naked towards the top, and terminated by fingle flowers of a gold colour. 5. The rofmarinifolia, with linear entire leaves, hath ihrubby ftalks, which rife about three feet high, fending out long flender branches, garnifhed with fingle linaer leaves of a pale-green colour. The ftalks are terminated by large, fingle, globular flowers, of a pale fulphur coluur. 6. The ninor, with linear obtufe leaves, is fomewhat like the fifth; but the branches are fhorter, thicker, and clofer garnifhed with leaves, which come out in clufters. The flowerftalks are fparfedly difpofed, and have leaves to their top; the flowers are fmall, and of a yellow colour. 7. The chamrmelifolia, with obtufe woolly leaves, hath flrubby ftaiks, which rife three feet high, garnifhed with broader leaves than either of the former, whofe indentures are loofer, but double; they are hoary, and when bruifed have an odour like chamomile. The leaves are placed pretty far afunder, and the ftalks are garnifhed with them to the top. The ftalks are divided likewife at the top into two or three foot-ftalks, each futtaining one pretty large fulphur-coloured flower.

All thefe plants may be cultivated fo as to become ornaments to a garden, particularly in imall bofqucts of ever-green fhrubs, where, if they are artfully intermixed with other plants of the fame growth, and placed in the from line, they will make an agreeable variety; efpecially if care be taken to trim them twice in a fummer, to keep them within bounds, otherwife their branches are apt to Atraggle, and in wet weather to be borne down and difplaced, which renders them unfightly; but when they are kept in order, their hoary and clifferent-coloured leaves will have a pretty effect in fuch plantations. - They may be propagated by planting flips or cuttings dusing the fpring, in a

Sansorini border of light freth earth, but main be watered and Thaded in hot dry weather, until they have taken roct; after which they will require no farther care but to
keep them clean irom weeds till autumn, when they theald be traniplanted where they are defigned to temain: but if the grougd is not ready by that time to receive them, it will be proper to let them iemain in the berder until fpring; for if they are tranfplanted late in autumn, they ase liable to be deftroyed by cold in winter.

SANTORINI, an inand of the A:chipelago, to the nerth of Candi.e, and to the fouthowelt of Nanphio. It is cight miles in length, and near as much in breadth, ard almort cevered with pumice-tone, whence the foil in gencral muft be dry and barren ; it is, however, greatly improved by the labour and in. duftry of the inhabitants, who have turned it into at garden. It afferds a great deal of barley, plenty of cotion, and l.rge quatities of wine. Fruit is farce exceft figs; and they have neither vil nor wood. The ishavitants are all Grecks, dind are about 10,000 in number. P'yrgos is the capital town, and there are feveral littic sowns and villages. They have but one fpring in the illand, for which reafon they preferve the rain-water in c:llerns. Though fubject to the Turks, they chooie their own magitrates. E. Long. 25. 5. N. Lat. 39. re.

SaNZ1O (Raphacl). See Raphael.
SAO , a territory, called a kingdom, of Africa, on the gold-coatt of Guinea, hardly two miles in length alons the the ee. It produces abundance of Indian ecrn, yams, potatoes, palm-wine, and oil. The inbabitants are very treacherous, and there is no dcaling with them without a great deal of caution. It conini:s feveral villages, of wheld Sabo is the principal; and the Dutch have a fort liare called Naflate
S.1ONE, a conideraber river of Fralice, which has its fource in mount Vorgue, near Darney; runs chrough ti:e Franche Conte Burgundy, Lemujolois; and falls into tl.e Rhone at Lyons. It fallics by Gray, Chalons, and Maicon.

SAP, the juice found in vegetables.
We obferved, when treating of PLAsts, that it has been long dipu:ed whether the fap of plants be analugous to the blood of arimals, and circulates in the lime mimer. We alio met.iicned the conclutions that Dr H hles drew from his numerous experiments, which were all i:1 crfofition to the dearinc that the fap circulates. As the iibject is curious and interelting, and as additi. mal light has ocen thrown upon it of late years, we will to commuricate it to our readers as tully as our limits will permit.

As the vegetable cconomy is thill but imperfectly underifocd, and experiments made for tracing the motion of the fap may lead to important difcoveries, we are happy to find, that of late years this fubject has been again revived. Dr Walker, profeffor of Natural Hittory in the unimerfity of Edinburgh, has publ:thed in the if volume of the plitu phical Tranfations of Edinburgh an account of a courte of very accurate and ingenious experiments, accompanied with obfervations and conclutions made w:th a caution which in. fpires corfidence, and is indeed worthy of a difciple of Bacon. He is the lirft pericin, as far as we know, who thought of comparing the thermomster with the notion of the fap.

It is well inwisn that in the ipring regetabies contain a great guantity offap; and there are fome trees, as, the birch and plane, which, if wounded, will difiharoe a great portion of it. Whence is this moilure derired? Whether is it imbibed from the atmophere, or does it flow from the foil through the roots? Thefe are the quellions which require firft to be anfwered; and Dr Walker's experiments enable us to anfwer them with confidence.
H: felected a vigorous young birch, 30 fect high and 26 inches in circumference at the ground. He bored a hole jult above the ground on the ift of Febraaty, and cut one of its branches at the extremity.
He repcated this every iecond He repcated this every iecond day ; but no moifture appeared at either of the places till the jth \(^{\text {th }}\) May, when a imall quantity flowed ou mating an incition near the ground. He then cur 21 incifinns in the trunk of the tree, on the north fise, at the dillance of : foot from one another, and reaching if \(m\) the ground to the height of 20 fect. The incifions were folid triangles, each fide heing an inch long and an inch deep, and ponetrating through the bark and word. Dr Walker vilited the tree almolt every day for two months, and marked exaytly from which of the incifions the fap fowed. He wblerved that it Howed from the loweft incifinn firlt, and gradually afcended to the highelt. The following tuble will thow the progrefs of the fap upwards, and its correlpondence with the thermometer.

The firlt eclumn is the day of the manth on which the obfervation was made; the fecond expreffes the number of incifions from which tiae fap fintwed on the day of the month oppolite; and the third column th: degree of the thermometer at noon. Some days are omitted in March, as the incifions, though made on th 5 th, did not bleed till the 11 th. Some days are alfo palied over in April, becaufe no obfervation was made on arcount of rain.

Dr Walker found that the fap afcerds through the rood, and fill mure copioufly between the wood and the bark; buenone could be perceived afcending througls the pith or the bark. He found alio, that when the thermometer at noon is about 49 , or between 46 and 50 , the fap rifes about one foot in 24 hours; that whe: the thermomeser it about +5 at noon, it afcends about

sais. \(\underbrace{\text { Sipincus. }}\) one fos: 10 ingo d.a.js; and that it does not afcend at atl ustifs the mid-day heat be above 40. He obferved ilat it mores wi:h more velncity through youg than tlirough old b:anclies. In one young branch it moved through feven fect in one dily, the thermometer being at 42 , while it moved in the trunk of the tree only feven fect in feven days. Dr Walker has thus explained the scafon why the buds on the exiremities of branches unfold fint ; becanfe they are placed on the youngett wond, to which the fap Rows moit abuadantly.

The effects produced by the mution of the fap deferve to be attended 10. In thofe parts to which it las mounted, the bark eafily feparates trim the woud, and the ligneous carcles maj, without ciffichity, be detached from one another. The buds begin to iwell and their feales to feparate, while thofe uranctes to which the fap has not afeended remain elofels folded. When the fap has reached the extremities of the branches, and has thus pervaded the whole phant, it is foon covered with opening buds and ceales to bleed. The blecding ceafes firft in the upper parts of the tree, and in the lower pa.ts fucceflively downwards, and the wood becomes dry. An inverted branch fows more copioully when cut thain thofe which are erect. I'his is a proof that the afcent of the fap is not occafoned by capillary attraction, for water which has rifon in a fmall glats tube by this attraction will not defeend when the tube is inveated.

It is evident that there is an intimate conection between heat and the afeent of the fap. It did not begin to How till the thermoserer food at a certain point: when it fell below 40 , it was arrefted in its progrels. The fouth fide of the tree, when the fun was bright, bied more profufly than the north fide; and at fun-fet the incilions at the tep ceafed to bleed, where it was expofed molt to the cold air, while it fiil continned to flow from the incifions next to the grouod; the ground retaining its heat longer than the air.

Sap, in lieges, is a trench, or an approach made under cuver of 10 or 12 feet uroad, when the befiegers come near the place, and the fire from the garrifon grows fo dangerous that they are not able to approach uncovered - I'here are feveral forts of faps; the fingle, which has only a lingle parapet; the double, having one on cacls fide; and the flying, made with gabions, \&c. In all faps traverfes are left to cover the men.

SAPINDUS, the soap-berry tree, in botany: a genus of the digynia order, belonging to the oftandria clafs of plants; and in the natural method ranking under the 23 dorder, Trikilate. The calyx is tetraplyyllous; the petals four; the capfules are flefhy, connate, and ventricofe.

The fpecies are four, the faponarid, fpinofus, trifoliatus, and chinenfis. The faponaria, with winged leaves, grows naturally in the iflands of the Weft Indies, where it rifes with a woudy ftalk from 20 to 30 feet high, fending out many branches garuifhed with winged leaves compofed of feveral pair of fpear-thaped lobes. The midrib has a membranaceons or leaty border, running on each fide from one pair of lobes to the other, which is broadeft in the middle between the lobes; the flowers are produced in inofe fpikes at the end of the branches; they are fmall and white, fo make no gieat appearance. Thefe are fucceeded by oval berries as large as middling cherries, fometimes
fingle, at oil.ces, :wr, thres, or fote ate jaitied to exaceria
gether; thefe have a faponacenus fiein or cover, which inclofes a very facoll roundifh nut of tiec fume form, of a fhining black vhen ripe. The fien or pulp which, furrounds the nuts is ured in Arnerica to wafn linen; Jut it is very apt to burnand deftroy it if often uled, being of a very acrid nature.

Thefe plants are propagated by focds; they moit be put into fmall pots, and piunged inen a liot-bed of tanners' bark. In five or fix *reks the plants wili appear, when the giaffes of the lint-bed frould \(1:\) raled every day in warm weather, to admil frefh :ir to the plants. In three weeks or a montl after is e plants appear, they will be fit to be tanenfatited, when they mutt be thaken out of the puts, and carefully farted, lo as not to injure their roots, and each phanied incen a fepa ate froall pot, and plunged into the hon-1)ed again, noferving to thade then from the fun matil they ha:e takea rew rno:; alier which tine they noult have free air admotted to them every day when the weather is warm, and will requare to be frequently watercj.

SAPONARIA, SorEwort, in botany: A gean:s of Line digynin order, belong ng to the decondria clais of plats; and in the natural method ranking under the 22d order, Caryonlyyllec. The ealyx is monophyilous and wat:ed; thene are five ungulated petals; the capfule is oblong and un locwlar.

There are eight fpecies, the nificinalis, vaccait, cretica progens, ilyrica, ocymoides, orientais, and lutea. The officinalis, which is a Lrtifh plant, has a creeping root, in that in a thort time it wuld fill a large fpace of ground. Ti.e lalks are ab ut two feet higit, and of purplifh colour. The foutlaiks of the flowers arife from :le wings of the laves ofpotite; they fultain four, five, or more purpue fuwers each ; which have generally two imall leaves placed under them. The Stalk is alio terminated by a loole bunch of fowers growing in form of an umbel; they have each a large fwelling cylindrical empalement, and five broad obtufe petals, which fpread open, of a purple colour. Thefe are fucceeded by oval capfules, with one cell filled with fmall reeds. - The decoction of this plant is ufed to clearife and fcour woollen cloths: the ponr people in fome countries ufe it inftead of foap for wafhing; from which ufe it had its name.

SAPOR, taste. Sce Taste, and Anatomy, no. 139.

SAPOTA, Plum, in botany. See Achras.
SAP1PERS, are foldiers belongin: to the royal artillery, whofe bulinefs it is to work it the faps, for which they have an extraordinary pay. A brigade of fappers generally confifis of eight men, divided equally inen two parties; and whilf one of thefe parties is advancing the fap, the other is turnifhing the gabions, fafcines, and ocher nccelfaty implements. They relieve each other alternately.

SAPPHIRA, was the wife of a rich merchant in Gneldies, and equally diftingnifhed for her beauty and her virtue. Rhinfanld, a German officer, and governor of the town of Gueldres, fell in love with her; and not being able to feduce her either by promifes or pre. fents, he imprifoned lier huband, pretending that he kept up a traterous correfpnndence with the enemies of the itate. Sapphira yiclded to the pation of the go-
\(\underbrace{\text { Sipphire. }}\) vernor in order to relieve her hufband from chains; but private orders had already been given to put him to death. His unhappy widow, overwhelmed with grief, complained to Charles duke of Burgundy. Ite ordered Rhinfauld to marry her, after having made orer to her all his polleffions. As foon as the deed was figned, and the marriage over, Charles commanded him to be put to death. Thus the children of a wife whom he had fecuced, and of a hufand whom he had murdered, became lawful heirs to all his wealth.

SAPPHIRE, a genus of precious fonnes, of a blue en. lour, and the hardelt of all except the ruby and diamond. They are found in the fame countries with the ruby; alfo in Bohemia, Alface, Siberia, and Auvergne. M. Ronie de l'Iffe mentions one found at Auvergne, which appeared quite green or blue according to the pofition in which it was viewed. Cronltcde, however, informs us, that the blue fluor fpars are frequently met with in collections under the name of fappises; and it is cert in from Pliny, B. 37. chap. 9. that the fipphire of the ancients was our lapis lazuli. They are feldom found of a deep blue colour throughout, or free from parallel vein; ; and when they are but flightly tinged, they are named wulite futphlires. The late unfortunate king of lirance had one with a ftripe of fine ycllow topaz in the midlic. Some are found half green and half red, and are foliated like the ruby. The fine hard fapphires, called by the jewellers oriental, are of the fame nature with the ruby and topal, excepting the mere circumftance of crionr. They are commonly in two oblong hexagno py: rimids, joined at their bafe, and pointed at top; fometimes alio in hexagonical columns.

The finelt lapphires, like molt of the genss, come from the Eaft Indies. Rufia does not produce the fapphise. In Sectland they are found of a hardnets and luftre equal to the oriental, both light and deep coloured, at Benachie, and Invercauld, Aberdenifh:re; Portfoy in Banffhire, and miny other plices. Mr Deuchar, fealengraver in Edinburgh, has in his poffelion a beantiful fapphire, which was tound in a double cryftal. On one of thefe is cut a head, which was effected with the greatelt difficulty, on account of its hardnefs; the other is cilt into facets, and has a finc water, and great brillisncy.

The fpecilic gravity of thefe precious fones, according to Bergman, is from 3,650 to 3,940. According to others the ipecilic gravity of the oriental fapphires is 3,294; that of the Btafilian 3,1307 ; and of thofe from Puy in Auvergne, \(4,0,69\). When powdered, they are fuffle widh borax, or microcofmic falt, into :s tranfparent ghals ; and the fame thing happens on treating them with magnefia albal. They are faid to lofe their colour by fre, and to become fo hardand tranfparentas finmetimes to pais for diumonds; but Mr Achard fourd Whis to be a miftake, and that the truef.ipphires are not in the leaft altered either in col ur, hardncfs, or weight, hy the moft intenfe fire. Thofe of Puy in Auvergne, however, bough by their cclour and ha: dnets they feem to approach the otiental fapphires, lole both the:r colour and tramparency in the lire, beoming back, and even vitrifying, which plainly thows them to be of a dif. ferent kind. Engeltronm informs us, that the fapphires, in their mugh or native ftate, crenerally cryftallize in two oblong heragonal pranids pointed at :un, Vol, XVJ.
and jnined at their bafes, but are fomatimes found of an hexagonal or columnat form.-A good lapphire of ten carats is valued at 50 guineas; if it weighs 20 carats, it is valued at 2 ro guineas; and, if under ten carats, its value may be found by multiplying the carat at 10s. 6 d . by the fquare of its weight.-S.apphires are preferable to commun rubics for jewelling watcher, on account of the homogeneous hardnefs of their fubftance; fome red ftones refembling rubies being met with, which are not uniformly hard.

SAPPHO, a famous poetefs of antiquity, who for herexcellence in her art has been called the Temth IIfufi, was born at Mitylene in the ifle of Lefos, :bout 610 years before Chrilt. She was contemporary with Stefichorus and Alcaus; which laft was her countryman, and as fume think her fuitor. A verfe of this poet, in which he infmuates to her his pation, is preferved in Arifotle, Rhet. lib. i. cap. 9. together with the fair damfel's anfwer.
Alc. I fain to Sappho would a wifh impart, But fear locks up the fecret in niy heart.
Sap. Thy downalt looks, refpect, and timid air, Too plain the nature of thy wifh declare. If lawless, wild, inordinate defire, Did not with thoughts impure thy bofom fire, Thy tongue and eycs, by innocence made bold, Ere now the fecret of thy foul had told.
M. la Fevre obferves, that S.uppho was not in her uftal good-humour when the gave fo cold an anfiwer to a requelt, for which, at another time, perhaps the would not have waited. It has been thought, too, that Anacrenn was one of her lovers, and his editor Barnes has taken fome pains to prove it : but chreno. logy will not admit this; fince, lupon inquiry, it will be found that Sappho was probably dead befure Anacrenn was Lorn. Of the numerous poems this lady wrote, there is nothing remaining but tome fmall frag. ments, which the ancient fcholiafts have cited; a hymn to Venus, preferved ly Dionyfius of Halicarnalfus; and an ode to one of her miftreffes \(t\) : iwhich 1 :It piece con- + Sec Puet firms a tradition celivered down from antiquity, that her ry \(\mathrm{n}^{\circ} 122\). amorous paftion extended even to perfons of her ourn fex, and that the was willing to have her miftreffes as well is her galldnts.

Ovid introduces her making a facrifice to Phaon, ene of her mate paramours; from which we learn, that Sappho's love for her own fex did not keep her from loring ours. She foll defperately in love with Phan, and did all fite could to winhim; but in vain: upon which fae threw herfelf headlong from a rock, atod died. It is faid that Sappho could not forbear following Phann into Sicily, whither he retired that he might not fee her; and that during her ftay in that illand fle probably' compofed the hymn to Venus, llill extant, in which the begs fo ardently the afiftance of that goddef. Her prayers, however, proved incffectual: Phaon was cruel to the laft degiec. The unfortunate Sappho was forced to take the dreadful le:1p; the went to the promontory I.cucas, and threw hereff into the fea. The cruelty of Phaon will not furpric us fo much, if we reflect, that fhe was a widow (for he had been married t.) a rich man in the ifle of Andros, by whom fle had a daughter, maned Cicis); that the had never been hand-
s:rahand fonve ; that the had obferved mo me:afure in lier pafion Whatiadex; and that lhan had long known all her charms. She w::s, however, a very great wit, and fur hat alone deferres to be remembered. ' The Mitylenians sith her recrit in fuch highelteem, that they paid her fivereign howours after her death, and famped their noney wih her image. 'The Romans afterwards erected a noble fatue of porphyy to her; and in fhort, ancients as well as moderns have done homur to her memory. Voffusfays, that none of the Greek poets cxcelled Sappio for fwectnets of velfe; and that the made Archiluchus the model of her ftyle, but at the fime time tonk care to folten the fererity of hio exprefficm. It mut be granted, fays Ripin, fiom what is lett us of Sapplo, that Longinus had great reafon to cacl the admirable genius of this woman; for there is in what renains of her fomething delicate, lhormonious, and impulioned to the latt degree.

SARABAND, a mulical compofition in the triple time, the motions of which are flow and ferious.
S.raband is allo a dance to the fame meafure which witily terminates when the hand that beats the time falls; and is oherwile much the fame as the minnet.

The foraband is fiid to be ariginally derived from the Saracens, and is ufually daticed to the found of the guitar or callanettes.
SARACA, in botany; a genus of the hexandria order, belneging to the diadelphia clafs of plants. -There is mo caly \(x\) : the corolla is fumel-fhaped and quadiind; the fildmentsare on each fide the throat of the corolla; the legumen is pedicellated.

SARACENS, the inhabitants of Arabia; fo called from the word fara, which fignifies a defert, as the greateft part of Arabia is ; and this being the country of Nahomet, his difciples were called Saracens.

SARAGOSSA, a city of Spain, in the kingdom of Arrigon, with an archbiffop's fee, an univerfity, and a court if inquifition. It is faid to have been built by the Phernicians; and the Romans fent a colony here in the acign of the emperor Auguftus, whence it had the name of Cirfar Augrifus, which by corruption has been changed into Sarigoffa. It is a large, handfome, and well-luilt town. The ftreets are long, broad, well-paved, and very clean, and the houfes from three to fix fories ligh. It is adcrned with many magnificent buildings; and they reckon 17 large churches, and 14 handfome monalleries, not to mention others lefs confiderable. The river Ebro runs acrofs the place, dividing it into two ; and on ins barks is a handfome quay, which ferves for a public walk. The Holy-ftreet is the largell, and fo broad that it may be taken for a fquare; and here they have their bull-fights: in this flreet there are feveral noblemen's families, particularly that of the viceroy. The convents are hardfome and richly adorned, as well as the churches. The cathedral clurch is a fpacious building, after the Gothic talfe ; but the fineft church is that of Nueftra Sigrora del Pilar, feated on the fide of the Ebro, and is a place of the greatef devotion in Spain. They tell us the Virgin appeared to St James, who was preaching the gofpel, and left him her image, with a lhandfome pilar of jafper: it is ftill in this church which they pretend is the firt in the woold beill to her honour. This image damis on a maible pillar, with a little Jefus in her arms; but the place is io dark, that it camot le feen without the affinance of
lamps, which are 50 in rumber, and all of filver. There are alfo chundiers and balufiades of maffy filver. The ornaments of this image are the richelt that can be imagined, her crown being full of precions flones of an inctimable price; in thort, there is fearce any thing to be feen bat gold and jewels, and a vait number of people come in pilgrimage hither. The town-houfe is a fumptuous firncture, adorned with fine columns: in the hall are the pictures of all the kings of Arragon; and in a corne: of it St George on horieback, with a dragon of white marble uader him. It is feated in :a very large plain, where the Ebro receives iwo other rivers: and over it are two bridjes, one of fone and the other of wood, which hatt has been thought the moot beautiful in Europe. A victory was obtained here over the French and Spariards in 1710 , but it was abandunco by the allies foon after. It is 97 miles wett by north of Tarragona, I37 weit of Barcelona, and 150 north-eaft of Madrid. W. Long. o. \(\ddagger\). N. Lat. 41.47

\section*{SARANNE. See Limua.}

SARCASM, in rhetoric, a keen bitter exprefion which has the true poiat of fatire, by which the orator fcoffs and infults his carmy: fuch as that of the Jews to our Saviour; "He faved uthers, himfelf he camot fave."

SARCOCELE, in furgery, a fpuricus rupture or hervia, wherein the tellicle is conliderably tumefied or indurated, like a fcirrhous, or much enlaged by a flelhy excrefcence, which is frequently attended with acute pains, fo as to degenerate at laft into a cancerous difpofition. See Surgery.

SARCOCOLLA, a concrete juice brought from Perfia and Arabia, in fmall whitifh-yellow grains, with a few of a reddith and fometimes of a deep red coluur mixed with then! ; the whiteft tears are preferred, as being the frefheft: its tate is bitter, accomp.nnied with a dull kind of fweetnefs. This drug difolves in watery liquors, and appears chiefy to be of the gummy kind, with a fmall admixture of refinous matter. It is principally cclebrated for conglutinating wounds and ulcers
 reither this nor any other drug has any jaft title to.

SARCOLOGY, is that part of anatomy which trea:s of the foft parts, aiz. the mufcles, inteftines, arteries, veins, nerves, and fat.

SARCONA, in furgery, denotes any fiefly excrefcence.
SARCOPHAGUS, in antiquity, a fort of Rone coffin or grave, wherein the ancients laid thofe they had not a mind to burn.

The word, as derived from the Greek, literally fignifies fe/beenter ; becaufe at firt they ufed a jort of tone for the making of tombs, which quickly confumed the bodies. See the following article.

Sarcophagus, or Lafis AJuus, in the natural hifo. ry of the ancients, a flone much ufed among the Greeks in their feulpoures, is recorded to have always perfectly confumed the fleth of human bodies buried in it in forty days. This property it was much famed for, and all the ancient naturalifts mention it. There \(w\) is another very fingular quality alfo in it, but whether in all, or only in fome peculiar picces of it, is not known: that is, its turning into ltone any thing that was put into velleis made of it. This is recorded ouly

\section*{SAR}
sarcerpha- only by Mutianus and Theophraftus, except that Piiny
gu. Sardanape-
lus.
had copied it from thefe authors, and fome of the later writers on thefe fubjects from him. 'l'he account Mutianus gives of it is, that it converted into fone the floes of perfons buried in it, as alfo the utenfils which it was in fome places cuftomary to bury with the dead, particularly thoie which the perfon while living mort delighted in. The utenfils this author mentions, are fuch as mutt have been made of very different matcrials: and hence it appears that this flone had a power of conluming not only flefh but that its petrifying qua'ity extended to fubllaness of very diffeent kinds. Whether ever it really poffefied this latt quality has been much doubted; and many, from the feeming improb bibity of it, have been afraid to record it. What has much encouraged the general dibelief of it is, Mutianus's accrunt of its takiny place on fubflances of very different kinds and textures; but this is no real objection, and the whole account has probably truth in it. Petrifactions in thofe early days might not be diftinguilhed from incrullations if fearry and fony matter on the furfaces 0 bodies only, as we find they are root with the gencsal ty of the wor'd even to this day; the incruftations ot fpar on moffes and other fubftances in fome of our fprings, bsing at this time c.lle 1 by many petrified mofs, \&c. and incruftations like thefe night eatily be formed on fibitances enclofed in veffels made of this Rone, by water pafling through its peres, diflodging from the conmon mafs of the fo:e, and carrying with it particies of fuch lpar as it contained; and afterwards falli.gg in repeated drops on whatever lay in its way, it might again depofit them on fuch fubitances in form of incruftations. By this means, thitg, made of ever fo different matter, which happened to ba inclufed, and in the way of the palfage of the water, would \(b\) : equally ir.crutted with and in apresance turnad int) flore, without reg.ra to the differen: configuration of their pores and parts.

The place from whence the ancients tell us they had this fone was Aflos, a city of Lycia, in the neighbourhood of which it was dug; and De Bont informs us, that in that country, and in fome parts of the Ealt, there are alfo flones of this kind, which, if tied to the bodies of living perfons, would in the fame manner confume their Heth. Hill's Notes on Theophraflus, p. 14.

SARCOTICS, in furgery, medicines which are fup. pofed to generate feith in wounds.

SARDANAPALUS, the latt king of Afyria, whoie character is one of the molt inf.mous in hitory. He is fail to have funk fo far in depravity, that, as har as he could, he changed his very fex and nature. He ciothed himfelf as a woman, and tpun amidat companies of his concubires. He painted his face, and thehaved in a more lewd manner than the moll lafivious harlot. In thr rt, he buriad himest in the moft unbounded fonfuality, quie rezardiefs of liex and the diatates of mtire. Havin!e grown clinus to all has fubjeas, a rebel. lion was tormed again!t him by Arbices the Mece and lielclis the Babylonian. They were attended, however, with sery bad linceefs at firft, being dete ated with great thanglater in three pitched battles. With great dificulty Be'clis prevailed upon his men to kecp the lield unly five days longer; when they were joined by the 13atriars, who had come to the affiftance of Sar dantpalus, but
had been prevailed \(\quad\) pnn to renome thcir allegiance to him. With this reinlorcement they tw ce defeited the troops of Sard napalus, who thut himfelf up in N:neveh the capital of his empire. The city held ont for three years; at the end of which, Sardinipalus finding himfelf unable to hold out any longcr, and dreading to fall into the hands of an enraged encmy, retired into his palace, in a court of which he caufed a valt pile of wond to be raifed; and heaping upon it all his gold and filver, and royal apparel, and at the fame time inclofiny his cunnchs and concubines in an apartment willin the pile, he fet fire to it, and fo deftroyed himfelf and all ingether.

SARDINLA, an inand of the Medierranean, hounded by the Arait which divides it from Corfica on the north; by the Tufan fea, which flows between this illand and Italy, on the eatt ; and by other parts of the Mediterranean fea on the fouth and well. It is about \(1+0\) miles in lengih and 00 in breadth, and cont itas 420,000 inhabitants. The revenuc arifes chiefly from a duty upon falt, and is barely fufficient to defray the expences of government; bu: it certainls might be confiderably augmented, as the foil produces wine, corn, and oil, in abundance. Moft of the falt that is exported is taken by the Dancs and Swedes; the Englith formerly took great quantities for Newf und ind, but h.1ving found it more convenient to procure it from span and Portugal, they now take little or none. A protit. able tunny fithery is carried on at the fouth-weft patt of the iflnd, but it is monopolized by the Date de sit Pierre, and a few more poople, who happen to be propriens of the a timing land. Wild bours abound in the hilly parts of the ifldn 1 , and here are fome few deer, not fo large as :hofe in Britain, but in colour and make exafily the fame. Beeves and theep are allo common, as weil as hortes.

The feudal fyem fill fubfifs in a 1 mited degree, and titles go with their eltates, fo that the purchajer of the latter inherits the former. The regular troops feldon exceed 2000 men ; but the militia amount to near 26,000, of whom 11,000 are cavalry. Their horfes are fmall, but uncommonly alive. It would be more cafy to beat them in a charge than to overtake them in a march. The country people are generally armed; but notwithtanding their having been fo long under the Spanifh and Italian government, affafinations are by no means frequent; and yet by the laws of the country, if a man flabs another without premeditated malice, wihin four hours after quarrelling with him, he is no: lizble to be hanged. On the orher hand, the church aftords nut protection to the guilty. The Sardinians are nut at all bigoted; and, next to the Spaniards, the Einglith are their favourites. The whole illand is fubject to the Duke of Sivory, who enjoys the title of king of Sardini.a. See Cagliari.

There is in this ifland a pleafing variety of hills and valleys, and the foil is generally fruitful; but the inhab:tants are a very iloohful generation, and culcisat: but a list'e part of \(i\). On the coaft there is a tillery of anchovies and coral, of which they fend latere quantities to Genod and Lecghorn. This ifland is divided ir to two parts; the one, culled Cufo di Cuglin i, lies to the foully; and the other Capo-di-L"Ig:ry, whi.h is feated th the north. The principal towns are Cajliari the capital, Orillagno, and siffiri.

SARDLs,

SARDIS, or Sardes, now called Sirilo or Sart, is an ancient town of Natclia in Afia, about 40 miles ealt (I Smyrna. It was much celebrated in early antiquity, Was curiched lyy the fortility of the foil, and had been the enpital of the Lydian kings. It was feated on the Side of mount 'rmolus; and the citadel, placed on a loty till, was remarkable for its great ftrength. It was the leat of king Cruefus, and was in his tinie taken by Cy rus; after which the Perlian fatrapas or commandant reficed at Sardis as the empercr did at Sufa. The city was alfo taken, burnt, and then eracuated by the 1/i elians in the tire of Darins, and the city and fortref, fure ondered on the afproach of Alexander after the battie of Gaanices. Under the Romans Sardis was a rery confiderable place till the time of Tiberius Crefir, when it fuffered prodigioully by an earthquake. The munificence of the emperve, however, was nobly exerted to repair the various damages it then fuftained. Julian attompted to reltore the heatlen worfhip in the place. Ile ereted temporary altars where none had ban l.ft, and repaited the temples if any veltiges remained. In the ytar 4 co it was phondered by the Goths, and it fuffered conilicleably in the fubfequent troubles of Afra. On the incurfion of the 'Fartars in 1304, the 'lurks were pirnitted to occupy a portion of the citadel, feparated by a trong wall with a gate, and were atenvideds murdaed in their neep. The fite of this rice noble city is now green and flowery, the whole kein 5 reduced to a poor village, containing nothing but wretched huts. There are, however, fome curious remains of artiquity about it, and fome ruins which difflay its aucient grandeur. See Cbandler's Trazels in Afa Mizor, p. 251, \&̌c.

I'here is in the place a large caravanfary, where travellers may commodioully lodge. The inhabitants are generally thepherds, who lead their theep into the fine paflures of the neighbouring plain. The Turks have a mofgue here, which was a Chrittian church, at the gate of which there are feveral columns of polifhed marble. There are a few Chiflians, who are employed in gardening. E. Long. 28.5. N. Lat. 37. 51.

SARDONIUS RISUS, Sardonian Lauglet.r. A conrultive involuntary laughter ; thus named from the berb.u fardonia, which is a pecies of ranuncrlus, and is faid to produce fuch convulive mactions in the checks as referuble thofe motions w. ich are obferved in the face during a fit of liughter. This complaint is fometimes \(f_{\text {F }}\) ecdily fatal. If the ranunculus happens to be the calfe, the cure mult te attempted by means of a vomit, and fiequent draugh:s of hydiomel with milk.

SARDONYX, a precious thone confiling of a mix. bure of the chalced ny and carneian, fometimes in frata, hut at other times blended together. It is found, I. Suriced with wh te and red frata, which may be cut in cameo as well as the onyx. 2. White with red dentritical figures, greatly reiembling the mochat-fone; but with this difference, that the figures in the fardony x are of a ted colour, in the other black. There is no real diffrence, excepting in the circumitance of hardnefs, between the onyx, cannelian, clalcedony, fardonyx, and argate, notwithtanding the different names bettowed upen them. Mongez informs us, that the jellow, or orange coloured agdes, with a wavy or undulating furface, are now commonily called fardonyx. See Car. xelian and Onyx.

SARGUS, in ichthyology. Sse Sparus.
SARIMPATAM, a country of Indothan, lying at the back of the dominions of the Samorin of Malabar, and which, as far as we know, was never fubdued by any foreign power. Mr Grofe relates, that "it has been conltantly a maxim with the inhabitants of this country never to make any but a defenfive war; and even then, not to kill any of their adverfaries in battle, but to cut off their nofes. To this fervice the military were peculiarly trained up, and the dread of the deformity proved fuffieiently flrong to keep their neighbours, not much more martial than themfelves, from effectually attacking them."

SARMENTOSN (from firmentum, a long fhoot like that of a vine) ; the name of the 11th clafs in Linneus's Fragments of a Natural Method, confiting of plants which have climbing feems and branches, that, like the vine, attach themtelves to the bodies in their neighbourhood for the purpofe of fupport. See Botany, p. 459.

SAROTHRA, in bntany: A genus of the trigynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 20 th order, Rotace.c. The corolla is pentapetalous; the capfule unilocular, trivalved, and coloured.

SARPLAR of WOoL, a quantity of wool, otherwile called a focket or balf fack; ia fack containing So tod; a tod two flone; and a fone 14 pounds.In Scotland it is called farpliath, and contains :o flone. SARRACONIA, in botany : A genus of the monogynia order, belonging to the polyandria clafs of plants; and in the natural method ranking under the \(54^{\text {th }}\) order Mifotlianea. The corolla is pentapetalous; the calyx is double, and triphyllous below; pentaphyllous above ; the capfule quinquelocular; the ftyle has a ftigma of the form of a flield.

SARSAPARILLA, in botany. See Smilax.
SARTORIUS, in Anatomy. See there, Table of the Mujcles.

Old SARUM, in Wilts, about one mile north of New Sarum or Salifbury, has the ruins of a fort which belonged to the ancient britons; and is faid alfo to have been one of the Roman flations. It has a double intrenehment, with a deep ditch. It is of an orbicular form, and has a very auguft look, being erected on one of the mol elegant plans for a fortrefs that can be imagined. In the nortl-weft angle ftood the palace of the bifhop, whofe fee was removed hither from Wilton and Sherborn; but the bifhop quarrelling with King Stephen, he feized the caltle and put a garrifon into it, which was the principal caufe of its deftruction, as the fee was foon after removed frorn hence to Salifbury in 1219. The area of this ancient city is Gituated on an artificial hill, whofe walls were three yards thick, the ruins of whicin in many places in the circumference are fill to be feen, and the tracks of the fireets and cathedial church may be traced out by the differe:t colour of the corn growing where once the city flood. Here fynods and parliaments have formerls been held, and hither were the fiates of the kingdom fummoned to fwear fidelity to William the Conqueror. Here alfo was a p.lace of the Britilh and Saxon kings, and of the Ruman emperors ; which was deferted in the reign of Henry III. for want of water, fo that one farm houre is all that is left of this ancient city ; yet it is called the Bo-

reugh of Old Sazum, and fends two ninmbers to parliament, who are chofen by the proprietors of certain adjicent lands.

In lebruary 1755 a fulterraneous pafinge was difcorered at this place, of which we have the following account in the Gentcman's Magazine for March,', in a lettor dated Salifbury, licb. ic. "Some ן erforis of Satil: bury on Saturday latt went to the upper verge of the fiert fization (the citadel), and on the righthand, atice they had seacted the fumnit, difoovered a large bole. They got a candle and lantern, ind went down a tight of feeps for more than 30 yards. It was an arched way feven lect wide, neatly chifiled out of the folis rozk or chalk. It is probable the crown of the arch gave way from the fudden thaw, and fell in. There is a great deal of rubbilinat ate entrance. It appeass to be between fir and feven feet high, and a circular arch overheal all the way. Thefe particulars I learnad from the perton who himeif explored it, but was afraid to go farther left it might fall in ag, in and bury him. He thinks it turns a little to the right towards Old Sarum hou.e, and cortinues under the foffe till it reached the outer verge. The marhs of a chiffel, he fays, dre vitible on the fide. There are two large pillars of fquareItnne at the entrance, which appear to have had a door at foct. They are 18 inches by 27 , of good free-fone, and the maton-work is extremely neat. The higheit Fart © the archway is two fect below the furlace of the ground.
"It is all now again filled up by order of farmer Vilithnrch, who tents the ground of Lord Camellord, and thinks curiofity would bring fo many people there as to tread down lis grafs whenever grats thall be there. I went into it 30 yards, which was as far as I could get for the rubbifh. 1 moafured it with a line, and fiound it extend full 120 fect inwards from the two pillars fuppifed to be the entrance; then onwards it appeare 1 to be filled to the roof with bubbifl, By neafiring with the fume line on the furface of the earth, I frend it mu? go mater the botom of the outer bank of the outer trench; where 1 think the opening may be fomd by digging a very litie vady. Whether it was a Roman or a chorman wark it is dificule to fay; lut it cortamly was interced as a pivate way to go into or ont of the calke; and probahly a furt or ft:ong cafte was baitt over the outcr emerance. Il.oked inr merip. tions or cuis., but have net heard of ary being feunc!"

ShDHES, in mil taly deefs, are badets of ditincticn worn ly the oficers of molt nativils, either sound their wibit co over their lhoulders. Thofe for the Brothth army are made of crimion filk ; for the Imperial army chimfon and gold; for the Pruilain army black titk ind liver ; the Hanoverians yeliow fios ; the Jortuguefe cimfon fll: with blue taffels.

SASINE, ur belsing, Üée Lav, lio c!xiv. : 5 , sic.
sisSA. See Mirrri, Opocalpasuri, and Bruce's Trauch, Vol. V. p. 27, \&ic.
SATAN, a name very common in Scripture. means the devil or chicfof the tallen angeis. See Devis:

SATELLITE, in aftonomy, the fame with a feocndary plimet or moon.

SATIRE. See Satyr.
SiATRAPA, or Satrapes, in Perfian autiquity, denotes an admiral ; but niare commonly the governor ut a province.
SATTIN, a ghofly hind of filk nuff, the warp of which is very finc, and flatus fo as to corcr the coarfer woof.

SATCINET, a flight thin kind of fattin, commonly friped, and ordinaril'y ufed by the ladies for fummer
night-gowns. night gowns.

SAIURANTS, in anatom", the fame with \(A_{B}\). sorbexis.

SATURATION, in cheminry, is the impregnating an acid with an alk:ali, or vice vyda, till eituar will raccire no more, and the mixture will then becone ::eutral.

SATURDAY, the feventh and laft day of the week, fo called from the idol Seater, worhifped on this day by the ancient Saxons, and thought to be the fime as the Saturn of the Latins.

SATUREIA, savory, in botany : A genus of the gymnofpermin, order, belonging to the didynamia clafs of planis; and in the natural methodi ranking under the tad order, Verticillata. The fegments of the corclla are nearly equal ; the famina fanding afunder.

Species. 1. The hortenfis, or fummer favory, is an annual plant, which grows naturally in the fouth of France and Italy, but is cultivated in many places both for the kitchen and medicinal ufe. 2. The montana, or winter favory, is a perennial plant growing naturally in the fouth of France and Italy, but is cultivated in gardens both for culinary and medicinal purpofes.
Culture. Both kinds are propogated by feeds. Thofe of the firt kird thould be fown in the beginning of April npion a bed of light earth, either where they are to remain, or for tranfplanting. If the plants are to fland unremoved, they fhould be fown thinly; but if they are to be tranfplanted, they may be fown clofer. The fecond fpecies may be fown upon a poor dry foil, where the plants will endure the fevereft winters, though they are often killed by the froft when planted in good ground. Thle plants will continue feveral years ; but when they aie old, th.c fhoots will be fhort and not fo well lurn. thes with leaves: it will therefore be proper to raife a fupp'y of young plan:s every year.

Ufis. Summer favory is a very warm pungent aromatic; and affirds in diflillation with water a fubtile eilentint cit, of a peneirating fmell, and very hot acrid tafte. It yields little of its virtues by infurion to aqueous liquors; resiti.ed fipirit extrats the whole of its taile and imell, and elevates nothing in difillation.
SATURN, in aftroromy, cne of the flinets of our fular fylkem, revolving at the diftance of moee than 900 millions of miles from the fun. See Astronomy, \(11^{4} 31,184-109,191\), and 269 .

Ur Eerfichel, who has fo mu.h fignalized himif. If by his difecveries in the celeftial fegions, has not omitted to make his cobervations on this platet, which he confiders as one of the moft engaging c bjeEts that atronomy offers to our view. His at.ention was firft drawn to it in the gear titi, when he faw i:s ring refeml livg in appearance a ratruw line, extending on both fides not much lefs than the cameter of the plunet's difk. The obicrvation was talion with a Give and an half feet reflidor

Hconn on the \(\boldsymbol{r}^{7}\) th of March ; and on the \(3 d\) of Apil, the fame year, when the planct appeated totally deprived 'f this moble appendage, by reafon of the edge of the ring being then turned directly towards the earth, and invifile on account of its thinnefs or incapacity to refled the light to fuch a diftance. During the fucceeding year, the ring appeared gradually opened, and at laft affumed the thape of an ellipfe. "It thould be noticed (fays he), that the black difk or thelt upon the ring of Saturn is not in the middle of its breadth. Nor is the ring fubdivided by many fuch lines, as has beer. reprefented in feveral treatifes of aftronomy; but that there is one fingle, dark, confiderably broad line, belt, or zone, upon the ring, which I bave always permanently found in the place where my figure reprefents it."

This zone, which is on the northern part of the ring, does not change its fhape or culour like the belts of Jupiter, fo that it is probably owing to fome permanent projection. It cannot, however, be the fhadow of a chain of mountains, as it is vifible all round the ring; and there could be no fhades vilible at the ends of the anfix, on aecount of the direction of the fun's illumination, which would be in the line of the chain; and the fuppofed argument will hold good againft the fuppofition of caverns or concavities. It is likewife evident, that this dark zone is contained between two concentric circles, as all the phenomena anfwer to the projection of fuch a zone. The Doctor gives a figure, reprefenting the planet as it appeared to him on the roth of May 1780 ; whence we fee that the zone is continued all the way round, with a gradual decreafe towards the middle, anfwering to the appearance of a narrow circular plane projected into an ellipfis. See Philofoph. Tranf. for 1790 , p. 3 - \&cc.

It hath been conjectured, that this appearance is cwing to a divifion of the ring, or rather that there are two rings about the planet; "but (firss Dr Herfchel) if one ring, of a breadth fo conliderable as that of Saturn, is juftly to be efteemed the moft wonderful arch that by the laws of gravity can be held together, how improbable mult it appear to fuppofe it fubdivided into narrow lips of rings, which by this feparation will be deprived of a fufficient depth, and thus lofe the only dimenfion which can keep them from falling upon the planet? It is true, indeed, that it may revolve with fuch vel-city as greatly to alift its Arength, and that in the fubdivifions, of courfe, the different velocities for exch divifion maly be equally fuppofed to keep them up."

As to the fubitance of the ring, the Dnetor fuppofes it to be no lefs folid than that of Siturn himelf. Thus in the two figures given with the Doctor's Differtation in the Pbilotophical Tranfictions above referred to, the hadow of the planet is delineated upon the ring as it aetually appeared, according to the fituation of the fun; and in like manner we wiil fee the fhidow of the ring upon the planet: and if we deduce the quantity of matter contained in the planet from the power by which the fitellites are preferved in thicir ot bils, the ring mult alfo be taken into account. It is indeed evident that the ring exerts a very confiderable force upon thefe bodies, fince we find them affected with many irregularities in their motions, which we canmot propelly afcribe 10 any other caufe than the quanticy of matter contained in the ring; or, at lea!l, it ought to be allowed to have a proper thare in producing them.

The ring feems to be endowed with a greater reflective power than the body of the planet; and the Doctor gives infances of his feeing part of the ring brighter than Saturn himfelf, as well as of his feeing it plainly through a telefcope which could fcarcely afford light enough for the planet. The mof remarkable property of this wonderful ring, however, is its extreme thinnefs. "When we were nearly in the plane of the ring (fays our author), I have repeatedly feen the firf, fecond, and third fatellites, nay even the fixth and feventh, pafs before and behind the ring in fuch a manner that they ferved as excellent micrometers to eftimate its thicknefs. It may be proper to mention a few inflances, efpecially as they will ferve to folve fume phenomena that have been remarked by nther aftronomers, though they bave not been accounted for in a manner confilt. ently with other known facts. July \(181 h_{1} 1789\), at \(19^{11} 4^{1^{\prime}} 9^{\prime \prime}\), frdereal time, the firlt fatellite fecmed to hang upon the following arm, declining a little towards the north, and I faw it gradually advance upon it towards the body of Saturn; but the ring was not fo thick as the lucid point. July 23 d , at \(\mathrm{I}^{\prime \prime} 4 \mathrm{I}^{\prime} \mathrm{S}^{\prime \prime}\); the fecond fatellite was a very little preceding the ring; but the ring appeared to be lefs than half the thicknefs of the fatellite. July 27 th , at \(20^{\text {h }} 15^{\prime} 12^{\prime \prime}\), the fecond fatellite was about the middle, upon the following arm of the ring, and towards the fouth; and the fixth fatellite on the farther end towards the noth ; but the arm was thinner than either of them. Aug. zyth, at \(22^{\mathrm{h}} 12^{\prime} 55^{\prime \prime}\), the third fatellite was upon the ring, near the end of the preceding arm, when the latter feemed not to be the fourth, or at moft the third part of the diameter of the fatellite ; which, in the fituation it was, 1 took to be lef's than one fingle fecond in diameter. At the fame time, I alfo faw the feventh fatellite following the third, at a little diftance, in the thape of a bead upon a thread, projecting on both fides of the fame arm. Hence alfe we are fure that the arm appeared thinner than the feventh fatellite, which is confiderably fmaller than the fixth, which again is leis than the firt. Auguft \(3^{117 t}\), at \(20^{\prime \frac{13}{2}} 48^{\prime} 26^{\prime \prime}\), the preceding arm was loaded about the middle with the third fatellite. Ontober \(15^{\text {th }}\), at \(0^{\text {h }} 43^{\prime} 44^{\prime \prime}\), I faw the fixth fatellite, without obltruction, about the middle of the preceding arm, though the ring was but barely vifible with my 40 feet reflector, even while the planet was in the meridian. However, we were then a little inclined to the plane of the ring, and the third fatellite, when it came near its conjunction with the firt, was fo fituated, that it mult have partly covered it a few minutes after I loft it behind iny houfe. In all thefe obfervations, the ring did not in the leaft interfere with my view of the fatcllites. Ofober 16 th, I followed the fixth and feventh fatellites up to the very difk of the planet; and the ring, which was extremely faint, did not in the lealt obftruct my feeing them gradually approach the difk, where the feventh vanifhed at \(21^{\mathrm{h}} 46^{\circ}\) \(44^{\prime \prime}\), and the fixth at \(22^{\mathrm{h}} 3^{6} 44^{\prime /}\). There is, however, fome fulpicion, that by a refraction through fome very rare atmoffhere on the two planes of the ring, the fatellites might be lifted up and depreffed fo as to become vifible on both fides of the ring, even though the latter noould be equal in thicknefs to the diameter of the fmalle? fatellite, which may amount to 1000 miles.As for the arguments of its incredible thinnefs, which
fume
s-turn. fome aftoromers liave brought firm the fort: time of its being iavilible whan the carth patfes thonugh its plane, we cannet fie muck value upon hemp for they muit have fippuced the edee of the ring, as they hwe alo a prefented it in the:r figures, to be fyture; but there is the stancet ruf in th iuppote it either pherical or funeroidal; in tol ich cale cuideat; the :ing camot difa apear for any long time. Nay I may venture to fay, that the oing cannot poflibly difappear, on account of its thinnefs; fince, ether from the edge or the fides, even if it were fquare on the ecmers, it mant always expofe to our lighe fome patt which is illuminated by the rays of the fiun ; and that this is plainly the cafe we may conclude from its being vilible in my telefeopes churing the time when others of lefs light had loft it; and when cvidently we were tu:ned towards the unenightencd fide, fo that we mant eith.r fee the rounding tude of the urienlightened edge, or clic the reflection of the light of Satum upon the fide of the darkened ring, as we fee the refleged light of the eath on the darkened part of the new moon. I will not however, take upon me to decide which of the two may be the cale, efpecially as there ate other very fircng reafons which induce us to think that the edge of the riing is of fuch a nature as not to refeet much light."

Sieveral aftronomershave fuppofed that the ring of Saturn is foll of mountains and inequalities, like the moon; and of this opinion Dr Herichel himielf was for a confiderable time, tiil happening to obierve one of thefe lucid points with attention lor a contiderable tine, he faw it leave the ring altogether, and thow itfelf as a fatellite never before oblcrved. With regard to the ring itfelf, he concludes his obfervations in thefe words: "Upon the whole, therefor", I camot fay that I had any one inftance that could iaduce me to believe that the ring was not of one uniform thickne?s ; that is, equally thick at equal diftances from the centre, and of an equal diameter theonghout the whole of its conftruction. The idea of frotuberant pnints upon the ring of Saturn, indeed, is of itfelf fufficent to rencler their exillence inadmifube, when we contider the enormous lize which fuch points ought \(t\), be of to render them vilible at the diffance we are from that planet.

With regard to the fatellite, the Doalor informs us, that he was long convinced of the exiftence of a fixth; and had he been more at leifure at the time of his difcovering thofe of the Genrgium Sidus, he would prohathy have completed the difcovery of the fatellites of Suturn alfo. The fixth was firts obferved ditinetly on the 28th of Augult 1-89, and the feventh on the 57th of Septeniber the line year. Treefe fatellites, however, do not occupy the place which we fhould have previounly fuppoied then, being, in fact, the innermoft of the whole. The fiventh i , nest the body of the planet itfelf, and is very fmall. It revolves at the diftance of \({ }_{27} \cdot 1366\) from the centre of Saturn, and feems to move exacly in the plate of the ring; but the Detor ohferves, that it is exceedingly dithecule to make a fetticient number of olferwations an it to determine the rewilation cxactly. He computcs its perindical time at 22.1 \(40^{\prime} 46^{1}\). The fixth futellite is next th the feventh, and revolves at the dillanee of \(35^{\circ .058} 8 \mathrm{frm}\) the centre of itsprimary in \(1^{d} 8^{\text {h }} 53^{\prime} 9^{6}\). Its light is confiderably firong, but not equal to that of the fint iatelli- of former alirnomers, which lies immediately beyond it.

The flanet Saturn is naw obferved to l:ave belts or Saturno fafcix apon its difk ats diftinctly as Jupter. Dr HerShat, onthe \(y^{\prime \prime} 1\) of Apill 1775, chierved a northe: \(n\) hole on his budy, itined a litele to the line of the rine. On the 1 it of 340 I-7 5 , there was andher belt at. forved, inclined a'sut \(1 \frac{5}{2}\) to the firme 1 ns, but more to the fu:h ; and on tie flinwing fide came up to the phace where the sing crofles the Lody of the planet. On the 8 h of April two felis were r.berved, and thefe cunticuad with variati-ns, and foncet mes the appeatance of a tiird beit, :ith the sth of Stpember, when the aciount if the obforations was difontinued. The Dofer wemak, that he generally cbierved tiofe beits in eytatnin! fiwations, thenght tometimes i: wis o herwife. Two condutions, be laye, may lie drawn liom the nbiervations lie made t! is !ear. "Ihe fan, which relates to the clanges in ile appear ince of the bolte, ic, that Satum has probibly a wry curfiveratle atmofphere, ia which there changes take place, futt as the alterations it the belte of fapiter hare beca thewn with great probability to be in his atmofilice. This ha atto been confirmed bey other obfervanms. 'Illas, in recultations of Satun's fitellites, 1 hare found them in lang to the dilk for a long while before they would vatmifh. And thought we nught to make fume alo:yarce fur the encroachome of lisht, whereby a fatelite is ien to reach up to the difk foner than it antaal! y does, yet without a conliderable refiation it could hardly le kept fo long in view after the apparent contaft. The time of banging upon the difk in the feventh fateliite has aftually annunted to 20 minutes. Now, as its quick motion during that interval carries it through a:1 arch of near fix degrces, we find that this would denote a fraction of about two feconds, provided the encroaching of light had roo thate in produciag the offect. By an oblervation of the fixth fatellite, the refraction of Saturn's atm fihere amounts to nearly the fame quanti y ; for this f.ucliite remained abous is or 15 minutes longer in view than it the uld have done ; and as it m .ves about \(2 \frac{3}{7}\) degrees in that time, and its orbit is luger than that of the feventh, the difictence is inconfurable. The next infereace we may draw from the appeatrace of the behes on Saturn is, that this planet turns \(u_{i}\) on an axis which is perpendicular to his ring. The arangenent of the belts, cluring the courle of 15 years that 1 have nblerved them, has always followed the diredion of the rirg, which is what I have called lining equatorial. Thus, as the ring opened, the belts bergan to advance towarels the fout, and to thiw an incuavature anfwering to the projection of an equatorial line, or to a parallel of the fame. When the ring clofcul up, they returned toward, the north, and are now, while the ring palfes (ver the certre, cxafly ranging with the fhadow of it, on the body, generall one on cach fide, with a white belt clffe til it. When I fay that the belts have always been equatooial, I pifs over trifing exceptions, which centainly werc owing to local causes. The ftep from equatomal his to a ro:ation nn an axis is fo eafy, \(n j\), in the cafe of \(J u_{1}\) i:er, fon well alcertained, that I fhall not I fit at on take the tanie confequence for gran where. Jime if there conhl remain a cinubt, the biervaticis of Janc 1ght, \(20: 1\), and \(21 \mathrm{~A}, 17 \mathrm{So}\), where :ho fatne tpot up an whe rit the
 it completel!."

\section*{\(S A T\)}

Another evidence that Saturn, as mell as the other planet, revolves upon its axis, is drawn from its flattened thipe, like that of Mars, Jupiter, and Saturn. On the 3 it of May 178 t , the dil: feemed to deviate an much from a true circle as that of Jupiter, though by the interference of the ring this could not be fo well determined as after an interval of cight years. On the 18 th of Auguft 1787 , the diference between the equatotial and polar diancters was meafured, the mean of three nbfervations of the former being \(22 z^{\prime \prime} .81\), of the latter 20 ". 6 t . From thefe obfervations, is apyears that the polar diameter of Saturn is to his equatorial diameter nearly as 10 to 11 ; and that his axis is perpendicular to the plane of the ring.

In a fubfequent paper, the Dotor gives up his reafoning againft fised lucid points in the ring, in confequence of having frequently obferved them in fuch fituations as could not by ans means be accounted for by the latellites. He even attempts to invalidate his own arguments abovementioned concerning the vaft magnitude of the mountains neceflary to make them vitible at this diftance. "As obfervations (fays he) carefully made faould always take the lead of theories, I thall not be concerned if fuch lucid fjots as I am now going to admit, fhould feem to contradict what has been faid in my laft paper concerning the idea of inequalities or protuberant points. We may, however, remark, that a lucid and apparently protuberant point may exift without any great inequality in the ring. A vivid light, for iuftaze, will feem to project greatly beyond the limits of the body on which it is placed. If, thereforc, the luminous places on the ring fhould be fuch as proceed from very bright reflecting regions, or, which is more probable, owe their cxilience to the more fluctuating caufes of inlerent fires acing with great violence, we need not imagine the ring of Saturn in be very uneven or dititorted, in crder to prefent us with fuchappearances. In this fenfe of the word, then, we may ftill oppote the idea of protuberant points, fuch as would denote immenfe mountains of clevated furface.
"On comparing thgether fevcral obfervations, a few trials fhew that the brighteft and beft obferved foot agrees to a revolution of \(10^{1 h} 32^{\prime} 15^{\prime \prime} \cdot 4\); and calculating its diflate from the centre of Saturn, on a fuppofition of its being a fatellite, we find it \(17^{1 / 227}\), which brings it upon the ring. It is theretore certain, that unlefs we thould imagine the ring to be fufficiently fluid to allow a fatellite (t) revolve in it, or fuppofe a notch, groove, or divifion in the ring, to fuffer the fatellite to pais along, we ought to admit a revolution of the ring itfelf. The denfity of the ring, indeed, may be tippofed to be very inconliderable by thofe whon imagine its light to be raiher the effect of fome thining Huid, like an aurora borealis, then a rellection from fome permanent fubitance ; but its difapparition, in general, and in my telefopes its faiutnefs, when turned edgewife, are in no m.nner favour.ble to this ide..When we add alfo, that this ring calts a deep th.dow upon the planct, is very tharply detined both in its outer and inner edge, and in bighenefs exceeds the planet itfelf, it fecms to be almoof proved that its confiltence cannot be leis than the body of Saturn, and that confequently no degree of fluidity can be admitted furficient to permit a revulving body to kcep in motion for any length of time. A groove might affurd a par-

fage, efpecially as on a former occafion we have al. ready connidered the idea of a divided ring. A circumflance alio which feems rather to favour this idea, is, that in fome obfervations a bright fipot has been feen to project equally on both fides, as the fatellites have been oblerved to do when they palfed the ring. Bu+, on the other hand, we ought to confider, that the fpet has often been obferved very near the end of the arms of Saturn's ring, and that the calculated diftance is confequently a little too fmall for fuch appearances, ant ought to be 19 or 20 feconds at leaft. Tre fhould altio attend to the lize of the fput, which feems to be variable : for it is hardly to be imagined that a fatellite, brighter than the fixth, and which could be feen with the moon nearly at full, thould fo often efcape our notice in its frequent revolutions, unlefs it varied much in its apparent brightnefs. To this we mult add another argument drawn from the number of lucid fiots, whicla will not agrce with the motion of one fatellite only : whereas, by admitting a revclution of the sing itfelt in \(10^{11} 3^{1} 15^{\prime \prime} \cdot 4\), and fuppoling all the fpots to adhere to the ring, and to fhare in the fame periodical return, provided they latt long enough to be feen many times, we thall be able to give an eaty folution of all the remaning phenomena. See Phil. Tranf. 1790, p. 427.

Saturn, in chemiftry, an appellation given to lead.

Saturn, in heraldry, denotes the black colour in blazoning the arms of fovereign princes.

Sarurn, one of the principal of the Pagan deities, was the fon of Coclus and 'Terra, and the father of Jupiter. He depo.ed and caltrated his father; and obliged his brother Titan to refign his crown to him, on condition of his bringing up none of his male illue, that the fuccellion might at length devolve on him. For this purpofe he devoured all the fons he had by his wife Rhea or Cybele: but fhe bringing forth at one time Jupiter and Juno, fhe prefented the latter to her huiband, and fent the boy to be rurfed on mount Ida; when Saturn being informed of her having a fon, demanded the child; but in his flead his wife gave him a flone fwaddled up like an infant, which he inflantly twallowed. 'Titan finding that Saturn had violated the contraft he had made witi him, put himfelf at the head of his children, and made war on his brother, and having made him and Cybele prifoners, confined them in Tartarus: but Jupiter being in the mean time grown up, raifed an army in Crete, went to his father's affiltance, defeated Titan, and refored Saturn to the throne. Some time after, Saturn being told that Jupiter intended to dethrone him, endeavoured to prevent it ; but the latter being informed of his intentions, depofed his father, and threw him into Tartalus. But Saturn efcaping from thence fled into Italy, where he was kindly received by Janus king of the country, who afficiated him to the government: whence Italy obtained the nane of Saturnia Tellus; as alfo that of Latium, from latio, "to lie hid." There Saturn by the wifdom and mildnefs of his government, is faid to have produced the golden age.

Siturn is reprefented as an old man with four wings, armed with a ficythe; fometimes he is delineated under the figure of a ferpent with its tail in its mouth. This is emblematic of the feafons, which roll perpetually in the fame circle. Sometimes alfo Saturn is painted

Eaturnaliz with a fand giafs in his land. 7"ne Creoks fay, that
Il the fory of his mutilating his father and deflroying his children is an allegory, which fignifics, that Time devours the palt and prefent, and will alfo devour the future. The Romans, in honour of him, built a temple and celebrated a leftival, which they called Saturnalia. During this fetival no bufinefs or profeflion was allowed to he carried on except cookery; all diftinctions of rank ceafed; flaves could fiy what they pleafed to their mafters with impurity ; they could even rally them with their faults before their faces.

SATURNALIA, in Roman antiquity, a fenival obferved about the middle of December, in honour of the god Saturn, whom Lacan introduces giving an account of the ceremonies obferved on this occafion, thus. "During my whole reign, which lafts but for one week, no public bufmefs is done; there is nothing but drinking, finging, playing, creating imaginary kings, placing fervants with their mafters at table, \&ec. There fhall be no difputes, reproaches, \&c. but the rich and poor, malters and flaves, fhall be equal," sic.

On this fettival the Romans facrificed bare-headed, contrary to their cultom at other facrifices.

SATURNINE, an appeliation given to perfons of a melancholy difpofition, as being fuppofed under the influence of the planet Saturn.

SATURNITE, a name given by Mr Kirwan to a new metallic fubtance, fuppofed to be difcovered by M. Monnet. It was met with in fome lead founderies at a place named Poulla ousn in Brittany ; bsing feparated from the lead ore during its torrefaction. It refembles lead in colour, weight, folubility in acids and other properties, but differs from it in being more fufible, brittle, eafily feorified and volatilized, and likewife not being mifcible with lead in fufion. Meffeurs Haffenfratz and Girond contended, that this faturnite was nothing but a compound of different fubitances, and accordingly gave an analyfis of it as confinting of lead, copper, iron, filver, and fulphur ; the proportions of which munt naturally vary according to the quality of the ore put into the furnace. M. Monnet, however, infifted that the fubfance analyfed by them was not that which he had difoovered; but when he again vifited the mines abovementioned, he could meet with none of the fubfance there which he found before.

SATYAVRATA, or Menu, in Indian mythology, is believed by the Hindoos to hare reigned over the whole world in the earliefl age of their chronolngy, and to have refided in the country of Dravira on the coaft of the eaftern Indian peniutula. His patronymic name was Viivalwata, or child of the fun. In the Bhagavat we are informed, that the Lord of the Univerfe, intending to preferve him from the \(f\) a of deftrution, caufed by the depravity of the age, thus told him how be was to åt. "In feven days from the prefent time, O thou tamer of enemies, the three worlds will be planged in an ocean of death; but in the midat of the deftroying waves, a large veffel, fent by me for thy wife, faall ftand before thee. Then thalt thou take all medicinal herbs, all the variety of feeds; and, accompanied by feven fairts, encircled by pairs of all brute animals, thou fhalt enter the fpacious ark and continue in it, fecure from the flood on nne immenfe oce \(m\) without light, except the radiance of thy holy companions. When the fhip fhall be agitated by an impctuous wind, thou Vol. XVI.

Thalt faften it with a large fea-ferpent on niy lom; for I will be near thee: drawing the veffel, with thee and thy attendants, I will remain on the ocean, O chief of men, until a night of Brahmà fhall be complctely ended. Thou thatt then know my true greatnefs, rightly named the fupreme Godhead; by my favour, all thy quentions thall be anfwered, and thy mind abundantly inftucted." All this is faid to have been accomplifhed; and the fory is evidently that of Noalh difyuifed by A fiatic fiction and allegory. It proves, as Sir William Jones has rightly obferved, an ancient Indian tradition of the univerfal deluge defcribed by Moles; and enables us to trace the conneation between the eaftern and weftern traditions relating to that event. The fame learned author has fhown it to be in the higheft degree probable, that the Satyavrata of India is the Cromus of Greece and the Saturn of Italy. Sice Satern; and Mfatic Refearches, Vol. I. p. 230, \&c.
SATYR, or Satire, in matters of literature, a difcourfic or poem, expoling the vices and follies of mankind. See Poetry, Part II. Seet. x.

The chief fatirilts among the ancients are, Horace, Juvenal, and Perfius : thofe among the moderns, are, Reguier and Boilcau, in French; Butler, Dryden, Ro. chetter, Buekingham, Swift, Pope, Young, \&c. among the Englifi; and Cervantes among the Spaniards.

SATYRIASIS. See Medicine, n \(37^{2}\).
SATYRIUM, in botany: A genus of the diandria order, belonging to the gynandria clais of plants; and in the natural method ranking under the 42 d order, Verticillata. The nectarium is ferotiform, or inflated double behind the flower.

SATYRS (in ancient mythology) a fpecies of de-mi-gods who dwelt in the woods. They are reprefented as monters, half-men, and half-goats; having horns on their heads, a hairy body, with the feet and tail of a got. They are generally in the train that follows Bacchus. As the poets fuppofed that they were remarkable for piercing eyes and keen raillery, they have placed them in the fame picuures with the Graces, Loves, and even with Venus herfelf.

SAVAGE (Richard) one of the mon remarkable charaiers that is to be met with perhaps in all the records of biography, was the fon of Anne countefs of Macclesfield by the earl of Rivers, according to her own confeffion; and was born in 1698. This confeflion of adultery was made in order to procure a feparation from her hurband the earl of Macelesfield : yet, having obtained this delired end, no fnoner was her fpurious offspring brought into the world, than, without the dread of thune or poverty to excule her, the difcovered the refolution of difowning hins; and, as long as he lived, treated him with the mof unatural cruelty. She delivered him over to a poor voman to educate as lier own ; prevented the earl of Rivers from lcaving him a legacy of \(L .6020\), by declaring him dead; and in effeet deprived him of another legacy which his godmother Mrs Lloyd had left him, by concealing from him his birth, and thereby rendering it impoffible for him to profecute his claim. She endeavoured to fend him fecretly so the plantations; but this plan being either laid atide or frutrated, fac placed hini apprentice with a flocmaker. In this fituation, however, he did not long continue: for his nurfe dying, he went to take care of the efiefis of his fuppofed mother ; and found in

her bres fome lcters which difovered to young Savare his bir:h, and the caufe of its concealment.

Frem the moment of this difcovery it was \(n\) :tural frer him to become diffatistiod with his lituation as a thoemaker. He now conceived that he fad a ri, ht to thare in the amuence of his real mother; and therefore he direct!y, an 1 porbaps indifcreetly, applied to her, and made ure of erery art to awalen her tendernefs and attract her regard. But in vain did he folicit this unnatural parent ; the avoided him with the utmerf precantion, and tock meafures to prorent his ever entcring her houfe on any pretence whatever.

Suage was at this time fotonched ith the difovery c f his birth, that he frequently made it his prastice to walk before his mother's door in hopes of feeing her by accident; and often did he warmly folicit her to admit him to fee her; but ill to no purpofe: he could neither foften her heart nor open her hund.

Mean time, while he wats affidnouny en leavouring to roufe the affections of a mother in whom all natural atfedion was eatinet, he was dotiouse of the means of fupport, and reduced to the miferies of want. We are nit told hy what mans he got rid of his obligation to the fhemaker, or whether he ever was actually bound in him; but we now find him very differently employed in order io procere a fibliftence. In fhort, the gouth liad parte, and a ftrong inclination towards literaty purluits, elpecially poetry. He wrote a peem ; and afterwards two playc, I'oma's a Riddle and Lore in a l'eil: but the auther was allowed no part of the profits from the firt ; and from the fecond he received no other advantage than the acquaintance of Sir Kichard Stecl and Mr Wilks, by whom he was pitied, careffed, and relieved. However the kindnefs of his iriends not affording him a conftant fupply, he wrote the tragedy of Sir Tbomas Overlury; which not only procured him the efteem of many perfons of wit, but brought him in 200l. The celebrated Aaron Hill, Efq; was of great fervice to him in correcting and fiting this piece for the fage and the prefs; and extended his patronage fill farther. Ept Savage was, like many other wits, a bad manager, and was ever in diftrefs. As fatt as his fiiends raifed him out of one difficulty, he funk into another: and, when he found himfelf greatly involved, he would ramble about like a vagabond, with fearce a fhirt on lis back. He was in one of thefe fituations all the time wherein he wrote his tragedy abovementioned; without a lodging, and often without a dinner: fo that he uled to foibble on feraps of paper picked up by accident, or begged in the fheps, which he occafionally tepped into, as though's occurred to him, craving the favour of fen and ink, as it were juft to take a memo. randum.

Mr Hill alio earnefly promoted a fubfeription to a rolume of Mifcellanies, by Savage; and likcwice furnifhed part of the poems of which the velume was compoed. To this mifcellany Sarage wrore a preface, in which he gives an account of his mother's crueliy, in a very uncommon ftrain of humour.

The profits of his Tragedy and his Mifcellanies together, had now, for a time, fomewhit raifed poor \$dvage both in circumitances and ciedit ; fo that the world jutt began to behold him with a more favourable eye than formerly, when both his fame and life were endangered by a mult unhappy event. A drunken frolic
in which he one bight engaged, ended in a fray, and Savage unfortunately killed a man, for which he was condemned to be hanged; his friends carnefly folicited the mercy of the crown, while his mother as earnelly exerted herfelf to prevent his receiving it. The countefs of Hertford at length laid his whole cale before queen Caroline, and Savare obtained a rardon.

Savage had now loft that tendernefs for his mother, which the whole feries of her cruelty had not been able wholly to reprefs; and confidering her as an implacable enemy, whom nothing but his blood could fatisfy, threatened to harafs her with lampsons, and to publifi a copious narrative of her conduct, unlefs the confented to allow him a penfion. This expedient proved fuccefs. ful; and the lord Tytconnel, upon his promife of laying afide his defign of expefing his mother's crucliy, took him into his fanily, treated him as an equal, and engaged to allow him a penfion of 2001 . a-year. This was the golden part of Suvage's life. He was courted by all who erdeavoured to be thought men of genius, and careffed by all who valued themfelves upon a refined tatte. In this gay period of his life he publifhed the Tcmp.'e of Healib and Mirlb, on the recovery of lady Tyrcennel from a languifhing illnefs; and The Wanlerer, a moral poem, which he dedicated to lord T'yreonnel, in Arains of the higheft panegyric: but thefe praifes he in a fhort time found himfelf inclined to retract, being difcarded by the man on whom they were beflowed. Of this quarrel lord Tyrernnel and Mr Savage affigned very different reafons. Our author's known charader pleads too ftrongly againft him ; for his conduct was ever fuch as made all his friends, fonner or later, grow weary of him, and even forced mot of them to become his enemies.

Being thus once more turned adrift upon the world, Savage, whofe paftions were very ftrong, and whofe gratitude was very fmall, became extremely diligent in expoling the faults of lord Tyrconnel. He, moreover, now thought himfelf at liberty to take revenge upon his mother.-Accordingly he wrote Tbe Baftard, a poem, remarkable for the vivacity of its beginning, (where he finely enumerates the imaginaty advantages of bafe birth), and for the pathetic conclution, wherein he recounts the real calamitics which he fulfered by the crime of his parents.--The reader will not be difleafed with a tranfeript of fome of the lines in the opening of the poem, as a fpccimen of this writer's fpirit and manner of verfification.

I left he the baitard's birth! thro' wondrous wass,
He thines eccentilic like a comet's blaze.
No fichly fruit of faint compliance he ;
He ! famp'd in nature's mint with ecftacy !
He lives to build, not boaft, a gen'rous race;
No tenih tranfmitter of a foolith face.
He, kindling from within, requires no flame,
If glories in a baftard's glowing name.
- Nature's unbounded fin, he ftands alone,

His heart unbias'd, and his mind his own.
-O mother ! yet no mother!- 'tis to you
My thanks for fuch ditinguith'd claims are Jue.
This poem had an extraordinars fole ; and its appearance happening at the time when his mother was at Bath, many perions there took frequent opportunitics of repeating paffages from the Battard in her hear-

\section*{S A V} ing. This was perhaps the firf time that ever flie difcovered a fenfe of thame, and on this occafion the power of wit was very confpicuous; the wretch who had, without fcruple, proclaimed herfelf an adulterefs, and whu lad firf endeavoured to farve her fint then to trinfort him, and afterwards to hang him, wa not able to bear the reprefentation of her own conduet; but fled from reproach, though the felt no prin from guilt ; and left Bath with the utmof hate, to fhelter herielf among the crowds of London (A).

Some time after this, Savage formed the rcfolution of applying to the queen ; who having once given him life, he hoped the might farther extend her goodnefs to - him by enabling him to fupport it.-With this view, he publifhed a poem on her birth-day, which he entitled The Voluntecr-Laurcat ; fur which he was pleafed to fend him 501 . with an intimation that he might annually expea the fame bounty. But this annual allow. ance was nothing to a man of his ftange and fingular extravagance. His ufual cullom was, as foon as he had received his penfion, to difappear with it, and fecicte himfelf from his molt intimate friends, till every nailling of the 50l. was fpent; which done, he again appeared, pennylefs as beforc: But he would never inform any perfon where he had been, nor in what manner his money had been diflipated. From the reports, however, of fime who found means to penetrate his haunts, it would feem that he expended both his time and his cafl in the moft fordid and defpicable fenfundity; particularly in eating and dri king, in which he would indulge in the moft unfocial manner, fitting whole days and nights by himfelf, in obfeure houfes of entertainment, over his b stute and trencher, immerfed in filth and noth, with \(f\) arce decent appatel; generally wrapped up in a horfeman's great coat ; and, on the whole, with his viry homely countenance, and altogether, exhibiting an
object the mott difgufting to the fight, if not to fome other of the fenfes.

His wit and parts, however, Rill rai.ed him new friends as falt as his mifbehaviour lof him his old ones. Yet fuch was his conduct, that occafional relief only furnimed the means of occafional excefs; and he defeated all attempts made by his friends to fix him in a decent way. He was even reduced fo low as to be deflitute of a lodging ; infomuch that he often paffed his nights in thofe mean houfes that are fet open for cafual wanderers; fometimes in cellars amidft the riot and filth of the molt profiigate of the rabble ; and not feldom would he walk the ftreets till he was weary, and then lic down in fummer on a bulk, or in winter with his affociatcs among the afhes of a glafs houfe.

Yet, amidll all his penury and wretchednefs, had this man fo much pride, and fo high an opinion of his own merit, that he ever kept up his fpirits, and was always ready to reprefs, with foorn and contempt, the leaft appearance of any flight or indignity towards himelf, in the behaviour of his acquantance; among whom he looked upon none as his fuperior. He would be treated as an equal, even by perfuns of the liighent rank. We have an inftance of this prepofterous and inconfintent pride, in his refufing to wait upon a gentleman who was defirous of relieving him when at the loweft ebb of diftrefs, only becaufe the melfage fignifed the gen. tleman's defire to fee him at ni, ein the morning. Stvage could not bear that any one fhould prefume to prefcribe the hour of his attendance, and therefure he abfolutely rejected the proffered kindnefs. This life, unlappy as it may be already imagined, was yet rendered more unhappy, by the dear hof the queen, i: 1738; which Atroke deprived him of all hopes from the court. His penfion was difcontinucd, and the infulent manner in which he demanded of Sir Rnbert \({ }_{4} \mathrm{P}_{2}\)

Walpole
(a) Mr Bofwell, in his life of Dr Johnfon, has called in queftion the flory of Savage's birth, and grounded his fufpicion on two miftakes, or, as he calls them, falfehoods, which he thinks he has difonvered in his friend's memoirs of that extraordinary man. Johnfon has faid, that the earl of Rivers was S.vage's godfather, and gave him his own name; which, by his direction, was inferted in the regifter of the parilh of St Andres's, Holborn. Part of this, it feems, is not true; for Mr Bofivell carefully infpected that regifter, but no fuch entry is to be foutd. But does chis omition amount to a proof, that the perfon who called himfelf Richard Sazage was an impoftor, and not the fon of the earl of Rivers and the countefs of Maccle:field? Mr Bofwell thinks it does; and, in behalf of his opinion, appeals to the maxim falfum in uno, falfum in omnilus. The folidity of this maxim may be allowed by others; but it was not without furprife that, on fuch an occafion, we found it adopted by the bingrajher of Johnfon. To all who have compared his view of a celebrated caufe, with Stuart's letters on the lame fubject addretled to Lord Mansfield, it mult be apparent, that, at one period of his life, he would not have deemed a thoufand fuch miftakes fufficient to invalidate a nurrative otherwife fo well authenticated as that which relates to the birth of Savage. The truth is, t'lat the omillion of the name in the regiller of St Andrew's masy be eafily accounted for, without bringing againt the wetcl ef Savage an accufation of impolure, whilh neither his mother nor her friends dared to urge when provoked to it by every polfible motive that can influence human conduct. The carl oi Rivers would undoubtedly give the direction abous regitering the child's name to the fame perfon whom he catrufted with the care of his education; but that perfon, it is well known, was the countefs of Macclesfie!d, whon, as the had rcfolved from his bith to dillown her fon, would t.ake care that the direction fin whe no obeyed.

That which, in Johnfin's life of Sav. ge, Mr Bofwell calls a feend falfehnod, feems not to amnunt even to a mitake. It is there flated, that "Lady Maccle field having lived for fome time upon very uncafy terms with her liufband, thought a public conteflion of adulery the mof obvious and expeditious method of obtaining her liberty." This Mr Befwell thinks cannot be truc ; becaufe, having perutcd the joumals of both houles of partiament at the perind of her divorec, he there found it authentically afcertaned, that fo far from voluntarily fubmitting to the ignominious charge of adulicry, the made a ftrenuous delence by her counfel. Lut what is this to the purpofe? J haton has no where faid, that the conlelied her aduitery at

Walpole to have it rellored, for ever cut off this con. fiderable fupply : which polfibly had been only delayed, and might have been recovered by proper application.
His diftrefs now became fo great, and fo notorious, that a fcheme was at lengeh concerted for procuring him a permanent relief. It was propofed that he fhould retire into Wales, with an allowance of 501 . per annum, on which he was to live privately, in a cheap place, for ever quitting his town-haunts, and sefigning all further pretenfions to fame. This offer he feemed gladly to accept; but his intentions were only to deceive his friends, by retiring for a while, to write another tragedy, and then to return with it to London in order to bring it upon the fage.

In 1739, he fet out for Swanfey, in the Briftol Ragecoach, and was furnifhed with 15 guineas to bear the expence of his journey. But, on the 14th day after his departure, his friends and benefactors, the principal of whom was no other than the great Mr Pope, who expected to hear of his arrival in Wales, were furprifed with a letter from Savage, informing thern that he was yet upon the road, and could not proceed for want of money. There was no other remedy than a remittance ; which was fent him, and by the help of which he was enabled to reach Briftol, from whence he was to proceed to Swanfey by water. At Britol, however, he found an embargo laid upon the fhipping; fo that he could not immediately obtain a paffage. Here, therefore, being obliged to ftay for fome time, he, with his ufual facility, fo ingratiated himfelf with the principal inhabitants, that he was frequently invited to their houfes, diftinguifhed at their public entertainments, and treated with a regard that highly gratified his vanits, and therefore eafily cngaged his affections. At length, with great reluctance, he proceeded to Swanfey ; where he lived about a year, very much diffatisfied with the
diminution of his falary ; for he had, in his letters, treated his contributors fo infolently, that moft of them withdrew their fubfriptions. Here he finifhed his tragedy, and refolved to return with it to London: which was ftrenuoully oppofed by his great and conftant friend Mr Fope; who propofed that Savage fhould put this play into the hands of Mr Thompfon and Mr Mallet, in order that they might fit it for the Aage, that his friends fhould receive the profits it might bring in, and that the author fhould receive the produce by way of annuity. This kind and prudent fcheme was rejected by Savage with the utmoft contempt.-He declared he would not fubmit his works to any one's correction; and that he would no longer be kept in leading-ftrings. Accordingly he foon returned to Britol, in his way to London; but at Briftol, meeting with a repetition of the fame kind treatment he had before found there, he was tempted to make a fecond ftay in that opulent city for fome time. Here he was again not only careffed and treated, but the fum of 301 . was railed for lim, with which it had been happy if he had immediately departed for London: But he never confidered that a frequent repetition of fuch kindnefs was not to be expectcd, and that it was polible to tire out the generofity of his Brifol friends, as he had before tired his friends everywhere elfe. In fhort, he remained here till his company was no longer welcome. His vifits in every family were too often repeated; his wit had loft its novelty, and his irregular behaviour grew troublefome. Neceffity came upon him before he was aware ; his money was fent, his clothes were worn out, his appearance was fhabby, and his prefence was difgufful at every table. He now began to find every man from home at whofe houfe he called; and he found it difficult to obtain a dinner. Thus reduced, it would have been prudent in him to have withdrawn from the place; but prudence and Savage were never acquainted.
the bar of either houfe of parliament, but only that her confeffion was public; and as he has taught us in his Dictionary, that whatever is notorious or generally known is public; public, in his fenfe of the word, that confeffion certainly was, if made to different individuals, in fuch a manner as fhowed that fhe was not anxious to conceal it from her hulband, or to prevent its notoriety. She might, however, have very cogent reafons for denying her guilt before parliament, and for making a ftrenuous defence by her counfel; as indeed, had the acted otherwife, it is very little probable that her great fortune would have been reftored to her, or that fhe could have obtained a fecond hufband.

But Mrr Bofvell is of opinion, that the perfon who affumed the name of Richard Savage was the fon of the fhoemaker under whofe care Lady Macclesfield's child was placed; becaufe "his not being able to obtain payment of Mrs Lloyd's legacy mult be imputed to his confcioufnefs that he was not the real perfon to whom that legac" was left." He muft have a willing mind who can admit this argument as a proof of impolure. Mrs Lloyd died when Savage was in his roth year, when he certainly did not know or fufpect that he was the ferfon for whom the legacy was intended, when he had none to profecute his claim, to fhelter him from opprefion, or to call in law to the affiftance of juftice. In fuch circumfances he could not have obtained payment of the inoney, unlefs the executors of the will had been infpired from heaven with the knowledge of the perfon to whom it was due.

To thefe and a thoufand fuch idle cavils it is a fufficient anfwer, that Savage was acknowledged and patronized as Lady Macclesfield's fon by Lord Tyrconnel, who was that lady's nephow; by Sir Richard Steel the intimate friend of colonel Brett, who was that lady's fecond hufband; by the Queen, who, upon the authority of that lady and her creatures, once thought Savage capable of entering his mot'er's houfe in the night with an intent to murder her; and in effect by the lady berfelf, who at one time was prevailed upon to give him 501 . and who fled before the Satire of the Baflarl, without offering, either by herfelf or her friends, to deny that the author of that poem was the perfon whom he called himfelf, or to infinuate fo much as that he might poffis'y be the fon of a fhoemaker. To Mr Bofwell all this fecms frange: to others, who look not with fo keen an cye for fuppofitious births, we think it mult appear convincing.

Savapt. \(\underbrace{2}\) acquainted. He ftaid, in the midf of poverty, hunger, and contempr, till the miltrefs of a colfee-houle, (1) whom he owed about eight pounds, arrefted him for the debt. He remained fur lome time, at a great expence, in the houre of the fheriff's officer, in hopes of procuring ball; which expence lie was enabled to defray, by a pretent of five guineas from Mr Nalh 2t Bath. No bail, however, was to be found ; fo that poor Savage was at laft lodged in Newgate, a prifon to named in Briftol.

But it was the fortune of this extraordinary mortal always to find more friends than he deferved. The keeper of the priton took compafinin on lim, and greatly foftened the rigours of his confinement by every kind of indulgence; he fupported him at his own table, gave him a cummodious 100 m to himfelf, allowed him to ftand at the door of the gaol, and even frequently took him into the fields for the benefit of the air and exercie: fo that, in reality, Savage endured fewer hardhips in this place than h= had ulually fuffered during the greateft part of lis life.

While he remained in this not intolerable prion, his ingratitude again broke out, in a bitter fatire on the city of Briftol; to which he certainly owed great obligations, notwithtanding the circumtances of his arrell; which was but the act of an individual, and that attended with no circumftances of injuftice or cruelty. This fatire he entitled London and Brifol delineated; and in it he abufed the inhabitants of the latter, with fuch a fpirit of refentment, that the reader would imagine he bad never received any other than the moft injurious treatment in that city.

When Savage had remained about fix months in this hofpitable prifon, he received a letter from Mr Pope, (who ftill continued to allow him 201. a-year) containing a charge of very atrocious ingratitude. What were the particulars of this cbarge we are not informed; but, from the notorious character of the man, there is reafon to fear that Savage was hut too juftly accufed. He, however, folemnly protefted his innocence; but he was very unulually affected on this occafion. In a few days after, he was feized with a diforder, which at firft was not fufpected to be dangerous: but growing daily more languid and dejected, it laft a fever feized him; and he expired on the it of Augult 1743, in the 46 th year of his age.

Thus lived, and thus died, Richard Savage, Efq; leaving behind him a character ftrangely chequered with vices and good qualities. Of the former we have feen a variety of inftances in this abfract of his life; of the latter, his peculiar fituation in the world gave him but few opportunities of making any confiderable difflay. He was, however, undoubtedly a man of excellent parts; and had he received the full benefits of a liberal education, and had his natural talents been cultivated to the belt advantage, he might have made a refpedable figure in life. He was happy in a quick difcernment, a retentive memory, and a lively flow of wit, which made his company much coveted; nor was his judgment both of writings and of men inferior to his wit: but he was too much a flave to his paffions, and his paffions were too eaflly excited. He was warm in his friendhips, but implacable in his enmity; and his greatell fauli, which is indeed the greatelt of all faults, was ingratitude. He fecmed to think every thing due
to his merit, and that bee was little obliged to any one for thofe favours which he thonght it thir duty to confer on hm: it is therefore the lefs to be wondered at, that he never rightly eftimated the kindnefs of his man.y friends and benelactors, or preferved a grateful and due fenie of their generofity towards him.

The works of this original writer, after laving lorg lain difperfed in magarines and fugitive publ cations, have beenlately collcited and publithed in an elegant edition, in 2 vols \(8 v 0\); to which are prefixed, the ad. mirable Memoirs of Savage, written by Dr Samuel Johnfon.

Savage is a word fo well underfood as fearcely to require explanation. When applied to inierior arimals, it denotes that they are wild, untamed, and crucl; when applied 10 man, it is of much the fame import with barbariar, and means a perfon who is untaught and uncivilized, or who is in the rude fate of uncultivated nature. That fuch men exift at prefent, and have exilted in moft ages of the world, is undeniable: but a queftion naturally occurs refpeting the origin of this favage ftate, the determination of which is of confiderable importance in dereloping the nature of man, and afcertaining the qualities and fowers of the human mind. Upon this fuhjedt, as upon moft others, opinions are very various, and the fyftems built upen them are ennfequently very contradictory. A large feat of anciert philofophers maintained that man jprung at firlt from the earth like his brother vegetables; that he was without ideas and without fpech; and that many ages elapfed before the race acquired the ufe of language, or attained to greater knowledge than the beats of the forelt. Other fects again, with the vulgar, and almon all the poets, maintained that the fiff mortals were wifer and happier, and more powerful, than any of their offspring ; that mankind, inftead of being originally favages, and rifing to the Aate of civilization by their own gradual and progreffive exertions, were created in a high degree of perfection; that, however, they degenerated from that itate, and that all nature degenerated with them. Hence the various ages of the world have almoft every where been compared to gold, filver, brafs, and iron, the goiden having been always fuppofed to be the firlt age.

Since the revival of letters in Europe, and efpecially during the prefent century, the fame quettion has been much agitated both in France and England, and by far the greater part of the mon fathionable names in modern fcience have declared for the originsl favagiim of men. Sues of the ancients as held that opinion were countcranced by the atheillic cofmogony of the lhenicians, and by the early hiffory of their own nations : the moderns build their fyttem uron what they fuppofe to be the conflitution of the human mind, and upon the late improvements in alts and fciences. As the queltion muft finally be decided by hiftorical evidence, before we make our appeal to facts, we thall confider the force of the modern reafonings from the fuppofed innate powers of the human mind; for that reafoning is totilly different from the other, and to blend them togcther would only prevent the reader from laving an idequate conception of either.

Upon the fuppofition that all manhind were original. ly favages, deltitute of the ufe of feech, and, in the Aricief fenfe of the words, milum ot furpe fecus, the great difficulty is to conceive how they could emerge from that thate, and become at laft enlightened and civiliz d. 'The modern advocates for the univerfality of the f ivage late remove this diffoulty by a number of inftinets or iturial fonfes, with which they fuppofe the human fimid end wed, and by whech the lavage is, without re-At-Rinn, nut only enabled to diftinguifh between right and wong, and prompted to do every thing neceffiary to the preve vation of his exiltence, and the continuance of the ipecies, but alfo led to the difcovery of what will contribute, in the firft inftance, to the eafe and accommoda\(t\) ons of life. Thefe inftincts, they think, brought mankind together when the reafon'ng faculty, which had hitherto been dormant, being now roufed by the collifions of fociety, made its obfervations upon the confequences of their different actions, tanght them to avoid fuch as experience fhowed to be pernicious, and to improve upon thofe which they fornd beneficial; and thus was the progrefs of civilization begun. But this theory is oppofed by objections which we know not how to obviate. The bundle of inflinets with which modern idlenefs, under the denomination of philofophy, has fo amply furnifhed the human nind, is a mere chimera. (See Insrinct.) But granting its reality, it is by no means fufficient to produce the confequences which are derived from it. That it is not the parent of language, we have fhown at large in another place (fee Language, \(\mathrm{n}^{\circ} 1-7\). ) ; and we have the confeffion of fome of the ableft advocates for the original favagifm of man, that large focieties muft have been formed before language could have been invented. How focieties, at leaft large focieties, could be formed and kept together withunt language, we have not indeed been told; but we are al. fured by every hiftorian and every traveller of credit, that in fuch focieties only have mankind been found civilized. Among known favages the focial ftorge is very much confined; and therefore, had it been in the firft race of men of as enlarged a nature, and as fafe a guide, as the intlinctive philotiphers contend that it was, it is plain that thofe men could rot have been favages. Such an appetite for fociety, and fuch a director of conduct, inftead of enabling mankind to have emerged from faragifm, would have effectually prevented them from ever becoming favage ; it would have knit them together from the very firlt, and furnilhed opportunities for the progenitors of the human race to have begun the procefs of civilization from the moment that they dropt from the hands of their Creator. Indeed, were the modern theories of internal fenfes and focial affections well founded, and wore thefe fenfes and affections fuffcient to have impelled the firf men into fociety, it is n t eafy to be conceived how there could be at this day a favage tribe on the fave of the earth. Natural caufes, operating in the fame direction and with the fame firce, mult in every age produce the fame efferis; and if the focial affections ot the firft mortals impelled them to fociety, and their reafning faculties immediately commenced the procefs of civilization, furely the fame affections and the fame faculties would in a greater or lefs degree bave had the fame eff.et in every age and on every tribe of their numero is offspring; and we thould every where obferve mankind adancing in civilization, inflead of flanding Itill as they often do, and fometimes retreating by a retrogr.ide motion. This, however, is far from being the cife. Hordes of favages exift in al-
mon cvery quarter of the globe; and the Chinefe, who have undoubtedly been in a fate of civilization for at leaft 2000 years, have during the whole of that long period been abfolutely Attionary, if they have not lof fome of their ancient aits. (See Porcelain). The origin of civilization, therefore, is not to be looked for in human inftincts or human propenfities, carrying men forward by a natural progrefs; for the fuppotition of fuch propenfities is contrary to fact; and by fact and hiftorical evidence, in conjunction with what we know of the nature of man, muft this great queftion be at laft decided.

In the article Religion, \(n^{\circ}\) 7. it has been fhewn that the firft men, if left to themfelves without any in Aruction, inftead of living the life of favages, and in procefs of time advan.ing towards civilization, muft have periflhed before they acquired even the ofe of fome of their fenfes. In the fame article it has been fhown ( \(\mathrm{n}^{\mathrm{D}} \mathrm{I}_{4}-17\) ), that Mcfes, as he is undoubtedly the oldeft hiftorian extant, wrote likewile by immediate in: fpiration; and that therefore, as he reprefents our firlt parents and their immediate defiendants as in a flate far removed from that of favages, it is vain to attempt to deduce the originality of fuch a flate from hypothetical theories of human nature. We have, indeed, heard it obferved by fome of the advocates for the antiquity and univerlality of the favage ftate, that to the appeal to revelation they have no objection, provided we take the Moficic account as it fands, and draw not from it conclufions which it will not fupport.

They contend, at the fame time, that there is no argument fairly deducible from the book of Genefis which militates againf their polition. Now we beg leave to remark, that befides the reafoning which we have already uled in the article juft referred to, we have as mucli politive evidence againf their polition as the nature of the Mofaic hiftory could be fuppofed to afford.

We are there told that God created man after his own image; that he gave him dominion over every thing in the fea, in the air, and over all the earth; that he appointed for his food various kinds of vegetables ; that he ordained the Sabbath to be obferved by him, in commemoration of the works of creation ; that he prepared for him a garden to till and to drefs; and that, as a teft of his religion and fubmifion to his Creator, he forbade him, under fevere penalies, to eat of a certain tree in that garden. We are then told that God brought to him every animal which had been created; and we find that Adam was fo well acquainted with their feveral natures as to give them names. When too an helpmate was provided for him, he immediately acknowledged her as bone of his bone, flefh of his Hefh, and calied her zvoman, becaufe fhe was taken out of man.

How thefe facts can be reconciled to a ftate of ignorant favagifm is to us abfolutely inconceivable ; and it is indeed Atrange, that men who profefs Chriftianity flould appeal to reafon, and flick by its decifion on a queftion which revelation has thus plainly decided againft them. But it is agreeable to their theory to believe that man rofe by flow fleps to the full u.e of his reafoning powers. To us, on the other hand, it appears equatly plaufible to fuppofe that our firf parents were created, not in full maturity, but mere infauts, and that they went th ough the tedious procefs of childhood and
youth,

\section*{\(\underbrace{\text { Savae. }}\)}
youth, \&c. as to fuppofe that their minds were created weak, uninformed, and uncivilized, as are thofe of favases.
But if it be granted that Adam had a tolerable flare of knouledge, and fome cirilisation, nothing cam be more natu: al than to larpofe that he would teach his defcendants what lie knew himfeif; and if the Scriptures are to be believed, we are certain that fime of them poffered more than favage knowledge, and bettor than favage manners. But intead of going on co firther perfection, as the thenry of modern philofophers w. uld lead as to fuppofe, we find that mankind degencrated in a molt aftonifhing degree ; the caufes of which we have already in part developed in the article PolyTHEISM, \(n^{0}+\), \&c.

This early degeneracy of the human race, or their fudjen progrefs towarjs ignorance and favagifm, appears to lead to an important c aftquence. If men io very foon after their creation, poifeffing, as we have feen ticy did, a confiderable fhare of knowledge and of civilization, infead of improving in cither, degenerated in both refpe?c, it would net appear that human nature has that flrong propeufity to refinement which many philofophers imagine; or that had all men been originally fivage, they would have civilized themfelves by their cwn exer:ions.

Of the ages before the flood we have r.o certain account any where but in Scrijture; where, though we find mankind reprefented as very wicked, we have no reation to luppofe them to have been abflute favages. On the contrary, we have much reafon, fiom the thurt account of Mofes, to conclude that they were far ad. vanced in the arts of civil life. Cain, we are told, built a city; and two of his early defcendints invented the harp and organ, and were artificers in brafs and iron. Cities are not built, nor mufical infruments invented. by favages, but by men highly cultivated: and furely we have no reafon to fuppote that the rightcous poterity of Seth were behind the apoflate defcendants of Cain in any branch of knowledge that was really ufefu!. That Noah and his faraily were far removed from favagifm, no one will controvert who believes th.t with thim was made a new covenant of religion; and it was unqueftionably their duy, as it mot otherwife have been their with, to communica:c what knowledge they polfeifed to their pofterity. Thus far hen every cor.fitlent Chrifian, we thirk, muft determine agant originil and univerfal favagifm.

In the prelinanary difcourfe to Sketches of the Hiftory of Man, Lord kames would inter, from fome fals which he Rates, that m in: pairs of the buman race were at inft created, of wery different forms and natures, bat all depending eatirely un their own natural talents. Bat to this itatement he rightly obferves, that the Motaic ace unt of the Creation oppofes infuperable objections. "Whence then (fays his Lordhip) ti.e degereracy of all men into the ravage fate? To account for th.t difm:l catakrophe, mankind muth have fulfered fome dreadtul convuliona." Now, if we miftake not, this is takin, for granted the very thing to be proved. We deny that at any ferind tince the creation of the work, sll men were funk into the thate of favages; and that they were, no proof has ret beea brought, nor duwe know of any that can be brou hat, unlets our talthonable philefophers choo.e to prop their
thenries by the buttrefs of Sanchoniatho's Phenician ecfmogeny. (See Saschoniatho.) His Inodmir,

Saraçe. however, goes en to fay, or rather to fughofe, that the confulion at Babel, \&e. Was this dreadtal corvulfin: Fer, lays he, "by confound"ng the language of mer, and fattering them all road upon the face of all the earth, they were rendered favages." Here again we have a politive aflertion, whout the lat thadow ct proof: for it does not al all appear th th the confuion of language, and the faltering abroad of the paople, tras a circumbltance finch as could induce univerfal thvagitm\% There is no reafon to think that all the men then alive were engaged in building the tower of Babel; nor does it appear from the Hebrew oisinal that the languag of thofe who were engaged in it was fo nuch changed as the reater is apt \(t\) inter iron our Englith velfion. (See Philology, no 8-16.) Thit the bu!!ders were folltered, is indeed certain ; and if any of thons were driven, in very fmall tribes, 10 a great ditathe trom their brethren, they would, in procefs of time inevitably become favages. (See Polytheism, \(\mathrm{l}^{\circ}\) 4-6, atrd Language, \(n^{\circ}-\).) ; but it is evidenr, from the Stcripture account of the peopling of the earth, that the defcendants of Shem and Japheth were n t icattered over the face of all the earth, and that thercfore they could not be rendered lavage by the cataftrophe at Babel. In the chapter which relates that wonderful event, the generations of Shem are given in order down to Abram ; but there is no indication that they had fuffered with the builders of the tower, or that any of them had degencrated into the ftate of favages. On the contrary, they appear to have prifelfed a confiderable degree if knowledge; and if ang credit be due to the radition which reprefents the father of Abraham as a fatuary, and himielf as killed in the fcience of aftronomy, they nuft live been for advanced in the arts of refinement. Even fuch of the pofterity of Ham as either emigrated or were driven from the plain of Shinar in large bndier, fo far from finking into favagifm, stained all the accomplifhments of the'r antediluvian anceltirs, and became alterwards the intrutiors of the Greeks and Remans. This is evident from the hifory of the Egyptians and other ealtern nati, ni, who in the days of Abraham were powerful and highly civilized. And that for many ages they did sot degenerdie into borbarifn, is apparent from its having been the ught to exalt the claracter of Mofes, that he was learned in all the wifiom ot the Egyptians, and from tlie wifdom of Solom \(n\) having been laid to exeel all the widum of thee c.sf country and of Egypt.

Thus decided are the Scriptures of the Old Teltament againtt the univerfal prevalence of favigifm in that pericd of the world; nor are the mof authentic Pagan wtiters of antiquity of a different opinion. Mochus the Phenician * Democritus, and Epicurus, appear to be eserato, the firit champions of the favage thate, ind they are lito swi. followed by a numerous bedy of puets and rhapicidits, ling. 1.s. anoong the Greeks and Romars, whu were un̨̨ueftion- crt b. 13 ably devoted to fable and fietion. The accounc which llemose at they hare given of the origin of man, the reater will titarifind in anotherjlace (fee Treulogr, Pat i. lict. 1.): But we hardly think that lie will empley it in fupp rt of the falhiowable doctrine of urigital fadgifm. Agsant the wild reveries of this fohoul are polled all the le.ders of the ctier ieds, Grecks and batarians; the phiio-
E.rage. fuphers of bo:th iceremies, the fages of the Italian and Alesandrian fil:ools; the matgi of Perfia; the Bramins of India, and the Drtids of Gaul, Se. The teftimony of the carly hiflorians among all the ancient nations, indeed, who are :lvowedly fabulith, is very little to be depended on, and has been called in queftion by the mofl judicious writers of Pag:n antiquity. (See Pliarch Vita Thes. fus init. Thucyd. 1. ו. cap. 1. Strabo, 1. 11. p. 507. Livy Pref. and Varro ap. Aygyl de Civ. \(D_{c i}\).) The mare populous and extenfive kingdoms and focieties were civilized at a period prior to the records of profane hillory : the prefumption, therefore, without taking revelation into the account, certainly is, that they were civilized from the beginning. This is rendered further probable from other circumftances. To accome for their fyftem, the advocates of favagifm are ubliged, as we have feen, to have recourfe to numerous fuppofitions. They imagine, that fince the creation dreadful conrulfions have happened, which have fpread ruin and devaftation over the earth, which have deftroyed learning and the arts, and brought on favagifm by one fudden blow. But this is reaioning at random, and without a veftige of probability: for the only convulfion that can be mentioned is that at Babel, which we have already fhown to be inadequate.

Further, it does not appear that any people who were ence civilized, and in procefs of time had degenerated into the favage or barbarous ftate, have ever recovered their prilline condition without foreign aid. From whence we conclu le, that man, once a favage, would never have raifed himfelf from that hopelefs ifter. This appears evident from the hiftory of the world ; for that i: requires Atrong incitements to keep man in a very high Itate of knowledge and civilization, is evident from what we know of the numerous nations which were famed in antiquity, but which are now degenerated in an aftonithing degree. That man cannot, or, which is the tame thing, has not rifen from barbarifm to civilization and fcience by his own efforts and natural talents, appears further from the following facts. The rudiments of all the learning, religion, laws, arts, and fciences, and other improvements that have enlightened Europe, a great part of Afia, and the northern coaft of Africa, were fo many rays diverging from two points, on the banks of the Euphrates and the Nile. In proportion as nations receded from thefe two fources of humanity and civil:zation, in the fame proportion were they more and more immerfed in ignorance and barbarifim. The Greeks bad made no progrefs towards civilization when the Titans firlt, and afterwards colonies from Egypt and Phenicia, taught them the very elements of lience and urbanity *. The aborigines of Italy uere in the fame flate prior to the arrival of the Pelafgi, and the colonies from Arcadia and nther parts of Greece. Spain was indebted for the firt feeds of improvement to the conmercial fpirit of the Phenicians. The Gauls, the 3ritons, and the Germans, derived from the Romans all that in the early perinds of their hiftory they knew of frience, or the arts of civil life, and fo on of other nations in antiquity. The fame appears to be the cafe in m dern times. The countries which have been difco. vered by the reflefs and inquifitive fpirit of Europeans have been generaily found in the lowelt thate of favagifm; from which, if they have emerged at all, it has been exanly in proportion to their connetion with the inha-
bitants of Europe. Even weftern Europe itfelf, when savage. funk in ignorance during the reigu of monkery, did not recover by the efforts of its own inhabitants. Had not the Greeks, who in the isth century took refuge in laty from the cruelty of the Turks, brought with them their ancient books, and taught the Italians to read them, we who are difputing about the origin of the favage ttate, aid the innate powers of the human mind, had at this day been grofs and ignorant favages ourfelves, incapable of reafoning with accuracy upon any fubject. That we have now advanced far before our malters is readily admitted; for the human mind, when put on the right track, and fpurred on by emulation and other iucitements, is capable of making great improvements: but between improving fcience, and emerging from favacifm, every one perceives there is an immente difference.

Lord Kames obferves, that the people who inhabit a grateful foil, where the neceflaries of life are eafily procured, are the firt who invent ufeful and ingenious arts, and the firlt who figure in the exercifes of the mind. But the Egyptians and Chaldeans, who are thought to fupport this remark, appear from what we have feen to have derived their knowledge from their antediluvian progenitors, and not from any advantages of fituation or ttrength of genius. Befides, the inhabitants of a great part of Africa, of North and South America, and of many of the inlands lately difcovered, live in regions equally fertile, and equally productive of the necellaries of life, with the regions of Chaldee and Egypt; yet thefe people have been favages from time immemorial, and continue fill in the fame fate. The Athenians, on the other hand, inhabited the moft barren and ungrateful region of Greece, while their perfection in the arts and fciences has never been equalled. The Norwegian colony which Settled in Iceland about the beginning of the 8th century, inhabited a moft bleak and barren foil, and yet the fine arts were eagerly cultivated in that dreary region when the reft of Europe were funk in ignorance and barbarifm. Again, there are many parts of Africa, and of North and South America, where the foil is neither fo luxuriant as to beget indolence, nor fo barren and ungrateful as to deprefs the fpirits by labour and poverty; where, notwithfanding, the inhabitants fill continue in an uncultured ftate. From all which, and from numerons other inflances which our limits permit us not to bring forward, we infer that tome external influence is neceffary to impel towards the civilication of favages: and that in the hiftory of the world, or the nature of the thing, we find no inftance of any people emerging from barbarifm by the progrefive effous of their own genius. On the contrary, as we find in focieties highly cultivated and lusurious a frong tendency to degenerate, fo in favages we not only find no mark of tendency to improvement, but rather a rooted averfion to it. Among them, indeed, the focial appetite never reaches beyond their own horde. It is, therefore, too weak and too confined to difpofe them to unite in large communities; and of courfe, had all mankind heen once in the favage ftate, they never could have arrived at any confiderable degree of civilization.

Inftead of trufting to any fuch natural progrefs, as is contended for, the Providence of Heaven, in pity to the human race, appears at different times, and in dif-
ferent

Savage, ferent countries, to have raited up fome perfons endowed Savaını-ld-Miar with fuperior talents, or, in the language of poctry, fome heroes, demi gods, or god like men, who having themfelves acquired fome know'edge in nations alrcady civilized, by ufeful inventions, legiflation, religious inflitutions, and morai arrangements, fowed the firf feeds of civilization among the h rdes of wandering difinited barbarians. This we find the Chinefe look up to their Fohee, the Indims to Brahma, rhe Perfians to Zoroalter, the Claldeans to Oancs, the Egspians to Thoth, the Phenicians to Melicerta, the Scandinavians to Odin, the Italians to Janus, Saturn, and licus, and the Peruvians to Manco. In latter times, and almof within our own view, we find the barbarous nations of Ruffin reduced to fome order and civilization by the aftonilhing powers and exertions of Peter the Great. The endeavours of fucceeding monarchs, and efpecially of the prefent emprefs, have powerfully contributed to the improvement of this mighyy empire. In many parts of it, however, we ftill find the inhabitants in a fate very little fuperior to favagifm ; and through the mon of it, the lower, and perhaps the middling orders, appear to retain an al*See Ruf- moft inviacible averfion to all further progrefs*. A fact fia. which, when added to numerous others of a fimilar na- ture which occur in the hiltory of the world, feems to prove indifputably that there is no fuch natural propenlity to improvement in the human mind as we are taught by fome authors to believe. The origin of f.tvagifm, if we allow mankind to have been at firf civilized, is eafily accounted for by natural means: The origin of civilization, if at any period the whole race were favages, cannot, we think, be accounted for otherwife than by a miracle, or repeated miracles.

To many perfons, in the prefent day efpecially, the dotrine we have now attempted to eftablith, will appear very humiliating ; ano perhaps it is this alone that has prevented many from giving the fubject fo patient a hearing as its importance feems to require. It is a fafhionable kind of philofophy to attribute to the human mind very pre-eminent powers; which fo flatter our pride, as in a great meafure, perhaps, to pervert our reafon, and hlind our judgment. The hifory of the wrold, and of the difpenfations of God to man, are certainly at variance with the popular doatine refpexting the origin of civilization; for if the human miad be poffeffed of that innate vigour which that docthine attributes to it, it will be extremely difficult to account for thofe numerous facts which feem with irrefiftible evidence to proclaim the contrary; for that uncealing care with which the Deity appears to have watched over us; and for thofe various and important revelations He has vouchfafed to us. Let us rejoice and be thankful that we are men, and that we are Chriltians; but let not a vain philofophy tempt us to imagine that we are angels or gods.

Sabage-1/and, one of the fmall iflands in the South Sea, lying in S. Lat. 19. 1. W. Long. 169. 37. It is about feven leagues in circuit, of a grod height, and has deep water clofe to its thores. Its interior parts are fuppofed to be barren, as there was no foil to be feen upon the coalt; the rocks alone fupplying the trees with humidity. The inbabitants are exceedingly wallike and fierce, fo that Captain Cook could not have any intercourfe with them.

SAVANNA-La-Har, a town of Jamaica, fitmated in V'cl. XVI.
the county of Corn:oall in that iffind.-It is the enuntstown, where the atize-cousts are held, lle lalt Thifdits in March, Jane, September, ard December. It has lat:10: been ernamented by atn eleg.nit court-houfe, and cos.tains about 100 other l:owife. It belungs to ifcltmoreland parifh, in which are 89 fuga: -efaics, 106 other ef. tates, and 18,000 hlaves.

SAVANNAlH, a port of entry and pontoturn in Georgia, formerly the inetropolis of that fate. It is fituated in Chatham county, on the fouth fid : of Savanah river upor. a ligh tandy b!uf, elevated about 50 feet above the river, and 17 miles above its conlluence with the ocean. The town is regularly laid out, in the form of a parallellogram, and contains 2,500 inhab;tants ; about 80 or 90 of thefe are Jews. The pulitic buildings are a Preßyterian, an Epilcopalian, a German Luthoran church, a Jewilh fynagogue, and a courthoufe. It is 120 miles from Alugulla, and 878 S . W. by S. of Philadelphia. W. Long. Ior. 20. N. Lat. 32.0.

Savaxiah, a large navigable river of Georgia, which is formed by the union of the Tugelo and Keowee rivers, that rife in the Appalachian mountains; thefe confluent rivers aflume the name of Savannah, which purfuing a S. E. courfe, paffes by Peterburg, and receives from the N. W. Broad river, a confiderable fream, thence continuing it S . E. courfe, enters the Atlantic, in Lat. \(3^{2}\). after pating by Augufta, Ebenczer, and Savannah : to the latter it is navigable in large velfels, having generally i 6 feet water at half-tides, and in boats of 100 fcet keel, carrying 80 or 90 hogtheads of tobacco, to Augufta, where it is about 250 yard; vide, and from 10 to 15 feet deep. The navigation is obitructed about 3 miles above Auguita, by falls, but after paffing thefe it is navigable to the mouth of Tugelo river. In high floods the balls are frequently pafted by loaded boats. The great number of logs and llumps which are concealed under water, have often overfet hoats; and render the uavigation of this river fomewhat dangerous. In the jear 1790 nearly 200 hog heads of tobaceo were lof in paffing down the river.

SAVARY (James), an eminent French writer on the fubject of trade, was born at Done, in Anjou, in 1622. Being bred to merchandize, he continued in trade until 1658 ; when he left off the practice, to cultivate the theory. He had married in 1650; and in 1660, when the king declared a purpofe of a figning privileges and penfions to fuch of his fubjects as had iwelve children alive, Mr Savary was not too rich to put in his claim to the royal bounty. He was aficrwards admitted of the council for the reformation of commerce ; and the orders whicli paffed in 1670 were drawn up by his inftrutions and advice. He wrote Lee Parfait Negociant, fto; and, livis et confoils fer les plus irmés. tanies malieres du Comnierce, in fto. He died in 1690 ; and out of 17 children whom he bad by ore wife, lelt 11. Two of his fons, James and Pbilemon Lewis, laboured jointly on a great work, Dianmaire Univerjelle du Commerce, 2 vols folio. 'This wark was begun by James, who was infpetor-general of the mannutctures at the cultomhoufe, Paris; who called in the alfifance of his brother Philemon Lewis, although a canon of the royal church of Si Maur; and by his death left lim to finifl it. This work appeared in \(1 \div 23\), and Philemon afterwards added a third fupplemental volume to the former. Poflethwayte's Englifh Dictionary of 'Irade

Savary. and Commerce, is a tranflation, wihh coanderable imfrovements, from Savary.
Sarary, an eminent French traveller and writer, Was born at Vitre, in Brittany, abuat the year 174 s. He fulied with applaufe at Remnes, and in 1776 travelled into Egypt, where he remained almoft three years. During this period he was wholly engaged in the fudy of the Arabian language, in fearching out ancient monuments, and in camining the national manners. After makir.g himfelf acquainted with the hnowledge and philofophy of Eggp:, he vifited the inlands in the Archipelago, where he fpent 18 months. On his return to France, in 1 :8c, he publifhed, 1. A Tranflation of the Korm, with a fhort Life of Mahomet, in 1783 , a vols 8 vo. 2. The Morality of the Koran, or a collection of the molt excellent Maxims in the Koran; a work extracted from his tranfation, which is efteemed both elegant and faithful. 3. Letters on Egypt, in 3 vols 8 VO , in 378 g . In thefe the author makes his oblervations with accuracy, paints with vivacity, and renders interefling every thing he relates. His defcriptions are in general faithful, but are perhaps in fome inftances too much ornamented. He has been juflly cenfured for painting modern Egypt and it inhabitants in too high colours. Thefe letters, however, were bought up by the curious public, and read with pleafure and adrantage. Encouraged by this flattering reception, he prepared his letters upon Greece. He died foon after at Paris of a malady contracted from too intenfe application. A fenfible obftruction in the right lobe of the liver had made a decifive progrefs, which the return of fummer, fome fimple medicines, a frifi regimen, and travelling, feemed to remove.

On his return into the country adjacent to Paris, his health however was ftill doubtful; for it is well known that when the organization of one of the vifcera has been much deranged, deep traces of it will ever remain. His antive mind, however, made him regardlefs of his health, and he conceived it his duty to profit by thofe appearances of recuvery which he experienced at the clofe of the fummer and the beginning of autumn, to put into order his travels into the illands of the Archipelago, intended as a continuation of his letters on Egryt. His warmth of temper was exafperated by fome lively criticifms which had been made on his former productions, and he gave himfelf up to ftudy with a dee ree of activity of which the confquences were futficiently obvious. An obetruction in the liver again took place, and made a new progrefs; his digellion became extremely languid; tleep quite forfook him, both by night and by day; a dry and troublefome cough came min his face appeared bloated, and his legs more and more inflamed. The ufe of batley-water and cream of tattar thill however promoted, in fome degree, the urinary fecretions, and afforded fome little glimmering of hope. In this fituation he returned to Paris in the beginning of the year 1788, to attend to the publication of his new work concerning the iflunds of the Archipefago, particularly the ithe of Candia. He had then all the fymptoms of a dangerous dropfy, which became flill more alarming from the very exhaufted flate of the vifcera. The right tobe of the liver was extremely hard and feafible. The patient had fnivering: withont any regul.ar returne, and lis itrength was undermined by a beatic fever. At the fame time fill more uneafy fymp-
tums took phace, thofe of a dropfy in the cheft; but the circumfances which deftroyed all hope, and announced his approaching diffolution, were a fevere pain in the left fide, with a very troublefome cough, and a copious and bloc dy expectoration (in hepaticis, fays Hippocrates, /putunn cruenlum mortiferum); his refipiration became more and more difficult ; his ftrength was exhaufted, and his death took place on the \(4^{\text {th }}\) of February 1788 , attended wih every indication of the moft copious overflowing in the cheft, and of an abfcefs in the liver.-Thus was deftrojed, in the vigour of his age, an author whofe character and talents rendered him worthy of the happieft lot.

Mr Savary's genius was lively and well cultivated; his heart warm and benevolent ; lis imagination vigorous; his memory retentive. He was cheerful and open; and had fo great a talent for telling a fory, that his company was not lefs agreeable than inftructive. He did not mingle much with the world, but was fatisfied with performing well the duties of a fon, of a brother, and of a friend.

SAUCISSE, or SAUCISSon, in mining, is a long pipe or bag made of cloth well pitched, or fometimes of leather, of about an inch and a half diameter, filled with powder, going from the clamber of the mine to the entrance of the gallery. It is generally placed in a wooden pipe called an auget, to prevent its growing damp. It ferves to give fire to mines, caffions, bomb-chefts, \&c.

Saucisson, is likewife a kind of faccine, longer than the common ones; they ferve to raife batteries and to repair breaches. They are alfo ufed in making epaulements, in fopping paflages, and in making thaverfes over a wet ditch, \&ic.

SAVE, a river of Germany, which has its fource in Upper Carniola, on the fromtiers of Carinthia.-It runs through Carniola from weft to eaft, afterwards feparates Sclavonia from Croatia, Bofinia, and part of Servia, and then falls into the Danube at Belgrade.

SAVER krout. See Croute.
SAVERNAKE-Forist is fituated near Marlhorough in Wiltfhire, and is 12 miles in circumference, well tocked with deer, and delighiful from the many villas cut through the woods and coppices with which it abounds. Eight of thefe viftas meet, like the ray's of a tar, in a point near the middle of the foreft, where an nctagon tower is erected to correfpond with the viftas; through one of which is a view of Tuttenham Park, Lord Ailefoury's feat, a flately edifice erected after the model, and under the direction, of the modern Vitruvius, the earl of Burlington, who to the Atrength and convenience of the Englith architecture has added the elegance of the Italian.

SAVILE (Sir George), afterwards marquis of Halifax, and one of the greatelt tatefmen of his time, was born about the year 1630 ; and fome time after his return from his travels was created a peer, in confideratim of his own and lis father's merits. He was a flenuous oppofer of the bill of exclufion; but prepofed fuch limitations of th: duke of York's authority, as flrould difable him from doing any harm cither in church or itate, as the taking out of his lands all power in ecclefiaftical matters, the difpofal of the public money, and the power of naking peace and war ; and lodging thefe in the two houles of parliament. After that bill was rejethed in the houte of luids, he preffed them, though without fuccefs, to proceed to the limitation of

Suvin the duke's power; and began with moving, that during the king's life he might be obliged to live live hundred miles ont of England. In Augutt 1682 he was created a marquis, and foon after made privy-feal. Upon King James's acceflion, he was made prefident of the council; but on his refufal to confent to the repal of the telt, he was difmiffed from all public employments. In that affembly of the lords which met after king James's withdrawing himfelf the firlt time from White. hall, the marquis was chofen their prefident; and upon the king's return from Feverlhann, he was fent, together with the earl of Slrewibury and lord Delamere, from the prince of Orange, to order his majelly to quit the palace at Whitehall. In the convention of parliament he was chofen Speaker of the houfe of lords, and Atrenowully fupported the motion for the vacancy of the throne, and the conjunctive fovereignty of the prince and princelis; upon whofe accellion he was again made pri-vy-feal. Yet, in 1689 , he quitted the court, and became a zealous oppofer of the meafures of government till his death, which happened in April 1695 . The rev. Mr Grainger oblerves, that "he was a perfon of unfettled principles, and of a lively imagination, which fometimes got the better of his judgment. He would never lufe his jeft, though it fpoiled his argument, or brought his fincerity or even his religion in queftion. He was defervedly celebrated for his parliamentary talents ; and in the famous contelt relating to the bill of exclufion was thought to be a match for his uncle Shaftefbury. The pieces he has left us fhow him to have been an ingenious, if not a mafterly writer; and his Alvice to a Daughter contains more good fenfe in fewer words than is, perhaps, to be found in any of his contemporary authors." His lordhip alio wrote, The Anatomy of an EquivaIent; a Leeter to a Diffenter; a Rough Draught of a New Model at Sea; and Masims of State; all which were printed together in one volume 8 vo.-Since thefe were alfo publithed under his na me the character of king Charles II. 8.0; the Character of Bifhop Burnet, and Hiftorical Obfervations upen the reigns of Edward I. II. III. and Richard II. with Remarks upon their faithful Counfellors and falfe Favourites.

SAVIN, in botany. See Juxiperus.
SAVIOUR, an appellation peculiarly given to Jefus Clirift, as being the Meffich and Saviour of the world. See Jesus.

Order of St S.Iriocr, a religious order of the Romifh Church, Counded by St Bridget, about the ycar 1345, and \(f_{0}\) called from its being pretended that our \(S\) iviour himelf declared its conftitution and rules to the fomad. refs. According to the conflitutions, this is principally founded for religious women who pay a particular honour to the holy virgin; but thene are fome monks of the order, to adminiller the facrament and lipiritual affiftance to the nuns.

SAUL the fon of Kifh, of the tribe of Benjamin, was the firl bing of the Ilraelites. On account of his difobedient condu?, the kingdom was taken frim his family, and given to Divid. See the Firf Book of Samuel.

Saub, o herwife called Paul. See Paul.
SAUMUR, a conliderable town of France, in Anjou, and capital of the Saumarois, with an ancient calitc. The town is fmall, but pleafantly fituated on the Loire, acrofs which is a iong bridge, continued through a number of illands. Samur was ancient! a noon im-
portant pafs oreer the river, and of confequence was Suunkers frequently and fiercely- difputed by cither paity, during the civil wars of Firance in the fixteenth century. The fortifications are of great frength, and Fienry the Fourth, on the reconciliation which took place between him and Henry the Third, near Tours, in 1589, demanded that Satumur hould be delivered to him, as ons of the cities of fafety. The caftle overlooks the town and river. It is built on a lofty eminence, and has a venerable and magnifieent appearance, and was lately ufed as a prifon of ttaie, wheie perfons of rank were frequently confined. The kings of Sicily, and dukes of A njou of the houfe of Valois, who defcended from John king of France, often refided in the cafte of Sanmur, as it conflituted a part of their Angevin dominions. E. Long. o. 2. N. Lat. 47. 15.

SAUNDERS, a kind of wood brought lronithe Eaft Indies, of which there are turse kinds; white, fellow, and red. See Pterocarpus and Sixtalus.

SAUNDERSON (Dr Robert), an eminent cafuif, Was born at Rotherham, in Yorkhire, on the inth September \(1 ; 87\), and was defcended of an ancient family. He attonded the grammar-fchool at Rotherham, where ho made fuch wonderful proficiency in the languages, that at 13 it was judged proper to fend him to Lincoln college, Osford. In 1608 he was appointed logic teader in the fame college. He took orders in 1611 , and was promoted fuccellively to feveral benefices. Archbifhop Laud recommended him to king Charles I. as a profound cafuift ; and that monarch, who feems to have been a great admirer of cafuiftical learning, appointed him one of his chaplains? in 163 r . Charles propofed feveral cafes of confcience to him, and received fo great fatisfation from his anfwers, that at the end of his month's attendance he told him, that he would wait with impatience during the intervening it months, as he was refolved to \(b=\) more intimatcly acquainted with him, when it would again be his turn to officiate. The king regularly attended his fermons, and Was wont to fay, that "he carried his ears to hear other preachers, but his confe.ence to hear Mr Suunderfon."

In \(16+2\) Charles created him regins profeffor of divinity at Oxford, with the canonry of Chrif church annexed: but the civil wars prevented him till 1646 from entering on the office; and in 1648 he was ejected by the vilitors which the parliament had commifioned. He mult have flond high in the public opinion; for in the fame year in which he was appointed profefor of divinity, both houfes of parlument recommended him to the king as one of their trufteas for fetrling the affairs of the church. The king, ton, repofed great confilence in his judgment, and irequently confulted him about the thate of his affairs. When the parliament propefed the abulition of the epiccapal form or church-government as incompatible with monarchy, Charles defited him to take the fubjer under his confidetation and deliver his opinina. He acenraingly wrote a trentife entitled, Epifcopacy as cftablithed by laws in England not prejudicial to regal power.

Dr Sunderion was taken prifoner by the parliament's troops and conveyed to Lincoln, in order to procure in exchange a Puritan divine ramed Clart, whom the kiag's army had taken. The exchange was agreed to, on comdition that \(D\) : Saundefon's living
havu!
\(\underbrace{\text { Sunderifon }}\)

Thonid be refored, and his perfon and property remain
unmolefted. The firt of there demands was readily complied with : and a flipulation was made, that the fecond flould be obierved; but it was impofible to reItrain the licentioufnefs of the foldiers. They entered his church in the time of divine fervice, interrupted hinn when reading priyers, and even liad the audacity to take the common prayer book from him, and to tear it to pieces.
The Honourable Mr Boyle, having read a work of Dr Saunderfon's entitled D: jurrantentiolligationc, was fo mucl pleafed, that he inquired at Bifhop Barlow, whether he thought it was polible to prevail on the author to write Cafes of Concicience, if an honorary penfion w:as anigned hinn to enable him to purchafe books, and pay an amanuentis. Saunderfon told Barlow, "t that if ar.y future tract of his could be of any ure to mankind, he would cheeffully fet abouit it without a penfion." Foyle, however, Sent him a prefent of 501 . fenfible, no doubt, that, like the other toyalifits, his finances could not be great. Upon this Saunderfon publified his book De Corifierria.
When Charles II. was reinftated in the throne, he recovered his profeffiorhip and canonry, and foon after was promoted to the bifhopric of Lincoln. During the two years and a half in which he poffefied this new office, he fentr a confiderable fum in augmenting poor vicarages, in repairing the palace at Bugden, \&c. He cied January \(=9,1662-\frac{\beta}{2}\), in his 7 Gth year.
Hee was a man of great acutenefs and folid judgment. "That Itaid and well-weighed man Dr Saunderfon (Fays \(\mathrm{Dr}_{r}\) Hammond) conceives all things deliberately, dwells upon them difcreetly, difcerns things that differ eractly, paffeth his judgment rationally, and exprefles it aptly, clearly, and honefty." Being afked, what books he had read moft? he replied, that " he did not read many books, but thofe which he did read were well chofen and frequently ferufed." Thefe, he faid, were chiefly three, Arifotle's Rhetoric, Ayuinas's \(S_{e}\) cunda Secunda, and Tully's Works ; efpecially his Offices, which he had not read over lefs than 20 times, and could even, in his old age, recite without book." He added, that "the learned civilian Dr Zouch had written Elementa juris frudentix, which he thought he could alfo fay without book, and that no wile man could read it too often."
It will now be proper to give a flort account of his worko. I. In 1615 he publifhed Lesite Artis Compertdium, which was the fyntem of lefures he had delivered in the Univerfity when be was logic-re:der. 2. Sermons, amounting in number to 36 , piinted in 1681 , folio, with the author's ifc by Walton. 3. Nine Cafes of Coircience refolved ; firft colleatcd in one volume, in 1678 , 8vo. 4. De juramenti oblijatione. This book was trarillated into Einglifh by Charles I. while a prifonce in the Hlle of Wight, and prited at London in \({ }^{1} 166_{5}, 8 \mathrm{vo}\). 5. De olligatione conffientic. 6. Centure of Mr Antony Afciani his book of the corfufions and revclutions of g-vernment. 7. Pax Ecclefira concerning irredefination, or the five points. 8. Epictopacy, as eftablifhed by Law in Englard, not prcjudicial to the regal piser, in 1661 . Befides thefe, he wrote two Difcourfes in defence of Uher's writings.
Sausderson (Dr Nicol.us), was born at Thurikore in Yorkhire in 1682 , and may be conlidered as a
prodigy for his application and fuccefs in mathematical Sunndefion literature in circumf:ances apparently the noft unfavourable. He lof liis fight by the fmall-pox before he was a year old. But this difalter did not prevent him from fearching after that knowledge for which nature had given him fo ardent a defire. Ho was iniciated into the Greek and Roman authors at a free- fchool at Pennifton. After frending fome years in the fudy of the languages, his father (who lhad a place in the excife) began to teach him the common rules of arithmetic. He foon furpaffed his father ; and could make long and difficult calculations, without having any fenfible marks to affit his memory. At 18 he was taught the principles of algebra and geometry by Richard Went of Un. doorbauk, Efq; who, though a gendleman of fortune, yet, being flrongly attached to mathematical learning, readily undertook the education of fo uncommon a genius. Saunderfon was alfo alifited in his mathematical Itudies by Dr Nettleton. Thefe two gentlemen read books to him and explained them. He was next fent to a.private academy at Attercliff near Sheffield, where logic and metaphyfics were chiefly taught. But thefe fciences not fuiting his turn of mind, he foon left the academy. He lived for fome time in the country without any inftructor; but fuch was the vigour of his own mind, that few inftrugions were neceffary : he only required books and a reader.
His father, belides the place he had in the excife, poffeffed alfo a fmall eftate; but having a numerous family to fupport, he was unable to give him a liberal education at one of the univerfities. Some of his friends who had remarked his perficuous and interetting manner of communicating his ideas, propofed that he fhould attend the univerfity of Cambridge as a teacher of mathematics. This propofal was immediately put in execution; and he was accordingly condufted to Cambridge in his 2 th year by Mr Jotbua Dunn, a fellorw. commoner of Chrift's college. Though he was not received as a member of the college, he was treated with great attention and refpect. He was allowed a chamber, and had free accefs to the library Mr Whiton was at that time profeffor of matheniatics; and as he read lectures in the way that Saunderion intended, it was naturally to be fuppofed he would view his projet as an invafion of his office. But, inflead of meditating any oppofition, the plan w.as no fooner mentioned to lyim than he gave his confent. Saunderfon's reputation was foon fpread tlirough the univerfity. When his leftures were announced, a general curiofity was excited to herr fuch intricate mathematical fubjeqs explained by a man who had been blind from his infancy. The fubjee of his leftures was the Principia Mathemalica, the Optics, and Aritbmctica Univerfalis of Sir Thrac Nerston. He was accordingly attended by a very numerous audience. It will appear at firft incredible to many that a blind man fhould be capable of explaining optics, which requires an accurate knowledge of the nature of light and colours ; but we mut recollect, that the theory of vifion is taught entirely by lines, and is fubjeer to the rules of geometry.
While thus employed in explaining the principles of the Newtonian philofnphy, he became known to its illufrisus author. He was alfo intimately acquainted with Hallcy, Cotes, De Moivre, and other eminent mathematicians. When Whiton was removed from his
prufefios-

Suanderfon profeffurflip, Saunderfon was univerfally allowed to be the man beft qualified for the fuccelfion. But to enjoy this office, it was neceflary, as the ftatutes direet, that he flould be promoted to a degree. To obtain this privilege the heads of the univerfity applied to their chancellor the duke of Somerfet, who procured the rogal mandate to confer upon him the degree of mater of arts. He wais then elected Iucafian profeffor of mathematics in November 1711. His inauguration feech was compofed in clallical Latin, and in the ftyle of Cicero, with whofe works he had beea much converfant. He now devoted his whole time to his lectures, and the inll ruction of his pupils. When George II. in 1728 , vilited the Univerfity of Cambridge, he expreffed a defire to fee Profefior Saunderfon. In compliance with this defire, he waited upon his majefty in the fenatehoufe, and was there, by the king's command, created doctor of laws. He was admitted ia member of the Royal Socicty in 1736.

Saunderion was naturally of a vigorous conftitution ; but having confined himfelf to a federtary life, he at length became licorbutic. For feveral years he felt a numbnefs in his limbs, which, in the fpring of 1739, brought on a mortification in his foot; and, unfortunately, his blood was fo ritiated by the fourvy, that afliftance from medicine was not to be expected. When he was informed that his death was ricar, he remained for a little fpace calm and filent; but he foon recovered his former vivacity, and converfed with his ufual eafe. He died on the 19th of Aptil 1739, in the 57th year of his age, and was buried at his own requelt in the chancel at Boxworth.

He married the daughter of the reverend Mr Dickens, rector of Boxworth, in Cambridgefhire, and by her had a fon and daughter.

Dr Saunderfon was rather to be admired as a man of wonderful genius and afliduity, than to be loved for amiable qualities. He fpoke his fentiments freely of charaters, and praifed or condemned his friends as well as his encmics without referve. This has been alcribed by fome to a love of defamation; but perhaps with more propricty it has been attributed by others to an inflexible love of truth, which urged him upon all occations to fpeak the fentiments of his mind without difguife, and without confiderigg whether this conduct would ple:fe ne give nffence. His fentiments were fuppofed unfavourable to reveale I religion. It is faid, that he alleged he could not krow Goul, becimfe he was blind, and could not fee his works; and that, upon this, Dr Holmes raplied, "Lay your hand upon yourfelf, and the oreamation which you will feel in your own body will dillipate fo grofs an error." On the other hand, we are informed, that he had defired the facrament to be given him on the evening hefore his death. He was, however, feized with a delirium, which rendered this impofible,

He wrote a fyftem of algebra, which was publifhed in 2 volumes 4to, at London, after his death in the year 1740, at the expence of the Univerfity of Cambrige.

Dr Saunderfon invented for his own ufe a Palpable Arithmeeric; thit is, a method of performing operations in arithmetic follely by the fenfe of touch. It confifted of a table raifed upon a fnall frame, fo that he enuld apply his hands with cqual eafe above and below. On this table were drawn a great number of paralled lines
which were croffed by others at ightangles; the cdzes Suunderion of the table were divided by notches half an inch cif. \| tant from one another, and hetween each notch therewcic Savonarols. five parallels; fo that every fquare iach was divided into a hundred litule fquares. At each angle of the fquares, where the parallols interfected one another, it hole was made quite through the table. In each hai: he placed two pins, a big and a fmall cne. It was by the various arrangements of the rins that Saunderfon performed his operations. A defiription of this method of making calculations by his table is given under the article Blind, \(n^{0} 38\), though it is chere by mitake faid that it was not of his own invention.

His fenfe of touch was to perfect, that he could difcover with the greateft exact nefs the flighteft inequality of furnace, and could diftinguifh in the mon finifhed works the fmalleft overfight in the polifh. In the cabinet of medals at Cambriage he could lingle out the Roman medals with the utmolt correinefs; lee could alfon perceive the flightefl variation is the atnof filere. One day, while fome gentlemen were making obfervations on the fun, he took notice of every little cluud that paffed over the fun which could in:errupt their labours. When any objert paffed before his face, even though at fome difance, he dicovered it, and could guefs its fize with confiderable accuracy. When hic walked, he knew when he paifed by a tree, a wall, or a houfe. He made thefe diftinctions from the different ways his face was affected by the motion of the ail.

His mufical car was remarkably acute ; be could diftinguifl accurately to the fifth of a note. In his youth he had been a performer on the flute; and he had made fuch proficiency, that if he had cultivated his talents in this way, he would probably have been as eminent in mufic as he was in mathematics. He recognized ne: only his friends, but even thofe with whom he k:to fightly acquainted, by the tone of their voice; and lee could judge with wonderful exactnefs of the fize of an: apartment into which he vias conducted.

SAVONA, a large, handfrme, populous, and hreus, towa of Italy, in the territory of Genoa, with iwo cafthes, and a bithop's fee. It coutains feveral handfome churches and well-built hructures. It was taken by the king of Sardinia in r 746 , at which time it hada capacious harbour ; but the people of Genoa, being afraid that it would hurt their own trade, choaked it up. It is feated on the Mediterrancan Iea, in a well cultivated country, abounding in filk and all kinds of gocd fruit. E.. Long. 8. 14. N. Lat. H. 2 I.

SA VONAROLA (Jerome), a famous Italian monk, was born at Ferrara in \(1+52\), and defeended of a noble family. At the age of 22 he allumad the habit of a Dominican friar, withont the knowledze of his parenss, and difinguified himfelf in that order by his piety and ability as a preacher. Flnrence was the theatre where he chofe to appear; there he preached, confelfed, and wrote. He had addrefs enough to place himfelf at the head of the faction which cppofed the family of the Medici. He explained the A pocalypfe, and there foud a prophecy which foretold the deftruction of his oiponents. He predifted a rennvation of the church, at. \(d\) declaimed with much feverity againf the clergy and the court of Rume. Alexander V1, excommanicated him, and prohibited him from preathing. He dericed the anathemas of the Pope: yet be foibore preathins

Sxom arola for fome time, and then refumed his employment with more applaulc than before. The Pope and the Medici family then thought of attacking him with his own v\(c\) capons. Savonarola having polted up a thelis as a fubject of difputation, a Francifan, by their inltigation, offered to prove it heretical. The Francifian was feconded by his brother friars, and Savonarola by his; and thus the two orders were at open war with each other. To fettle the difpute, and to convince their antagorits of the fuperior fanctity of Savonarol., one of the Dominicans offered to walk through a fire; and in order to prove his wickednefs, a Francifcan agreed to the fame experiment. The multitude, eager to witrefs fo extra rdinary a fpectacle, urged botl? parties to come to a decifion; and the magiftrates were contrained to give their confent. Accordingly, Saturday the \(7^{\text {th }}\) of April \(1+98\) was fixed for the trial. On that day the champions appeared; but when they faw one another in coid blood, and beheld the wood in flames, they were feized with fear, and were very anxious to eicape by any fubterfuge the imminent danger into which they had rafhly thrown themfelves. The Dominican pretended he could not enter the flames without the hof in his hand. This the m.igiftrates obftinate\(1 y\) refured to allow; and the Duminican's forlitude was not put to the tef. The Francifcans incited the multitnde againt their opponents, who accordingly affaulted their monaftery, broke open the gates which were thut againt them, and entered by force. Upon this, the magiffrates thought it neceffary to bring SavonaroL. to trial as an impolor. He was put to the torture, and examined; and the anfwers which he gave fully evinced that he was both a cheat and a fanatic. He boafted of having frequent converfations with God, and found his brother friars credulous enough to believe him. One of the Dominicans, who had fhared in his fufferings, affirmed, that he faw the Holy Ghoft in the thape of a dove, with feathers of gold and filver, twice in one day alight on the fhoulder of Savonarola and peck hisear; he pretended alfo that he had violent combats with demons. John Francis Picus earl of Mirandula, who wrote his life, affures us, that the devils which infefted the convent of the Dominicaris trembled at the fight of friar Jerome, and that out of vexation they always fupprefied fume letters of his name in pronouncing it. He expelled them from all the cells of the monatery. When he went round the convent iprinkling holy water to defend the friars from the infilts of the demons, it is faid the evil fipirits fpread thick clouds before him to prevent his paffage.-At length, the pope Alexander VI. fent the chief of the Dominicans, with biflop Romolino, to degrade him fromholy orders, and to deliver him up to the fecular julges with his tivo fanatical affociates. They were condemre \(\pm\) to be hanged and burned on the 2 3d May 3498 . Savenarolia fubmitted to the execu ion of the fentence with great firmnets ard devotion, and withnut mitering a word reffecting his innocence or his guilt. He was 46 years of age. Immediately after his death, his Confeffion was publifhed in his name. It contained nat:y extravagancies, but nothing to deferve fo fevere and infamous a punifliment. His atherents did not fail i. ar tribute to him the power of working miracles; and foftrong a vencration had they for their chief, that they peeerved with pious care any parts of his body which ale: could fanch fo m the flomes. The carl of Mirandu-
la, the author of his life, has deferibed him as an eminent faint. He gravely informs us, that his heart was found in a river; and that he had a piece of it in his poffefion, which had been very ufeful in curing difeafes, and ejecting demons. He remarks, that many of his perfecutors came to a miferable end. Savonarola has alfo been defended by Father Quetif, Bzovius, Baron, and other religinus Dominicans.

He wrote a prodigious number of books in favour of religion. He has left, I. Sermons in Italian ; 2. A Treatife entitled, Triumphus crucis; 3. Eruditorum Confelforum, and feveral others. His works have been publithed at Leyden in 6 volumes 12 mo .

SAVORY, in botany. See Saturela.
SAVOUR. See Taste.
SAVOY, a duchy lying between France and Italy, and which takes its name from the Latin Sabaadia, altered afterwards to Saboia, and Sabojia.

This country was anciently inhabited by the Celtes, whofe defcendants therein were fubdivided into the Allobroges, Nantuates, Veragri, Seduni, Salaffi, Centrones, Garocelli, and fome others of inferior note.Of all thefe the Allobroges were the mof confiderable. The reduction of thefe tribes, in which Julius Cæfar had made a great progrefs, was completed under Auguftus. Afterwards this country fhared the fate of the reft of the weftern empire, and was over-run by the northern barbarians. The Burgundians held it a confiderable time; but when or how it firf became a diftinct earldom under the prefent fanily, is what hiforians are not agreed about: thus much, however, is certain, that Amadxus I. who lived in the 12 th century, was count of it. In 1416, Amadæus VIII, was created by the emperor Sigifmund duke of Savoy; and Victor Amadxus firft took the title of king of Sicily, and afterwards of Sardinia. See Sarbinia. Savoy was lately conquered by the French, and added to the republic as the eightieth department. As this arrangement, though decreed by the convention to laft for ever, may probably be of fhort duration, we fhall write of the duchy as of an independent fate. Savoy, then, is bounded to the fouth by France and Piedmont; to the north by the lake of Geneva, which feparates it from Switzerland; to the wef by France; and to the eaft by Piedmont, the Milanefe, and Switzerland; its greateft length being about eighty-eight miles, and breadth about feventy-fix.

As it lies among the Alps, it is full of lofty mountains, which in general are very barren: many of the higheft of them are perpetually covered with ice and frow: The fummit of thofe called Montagnes Mistdites, "the curfed mountains," are faid to be more than two Euglifh miles in perpendicular height above the level of the lake of Geneva, and the level itfelf is much higher than the Mediterranean. In fome few of the valleys there is corn-land and pafure, and a good breed of cattle and mules; and along the lake of Geneva, and in two or three other places, a tolerable wine is produced. Mount Senis or Cenis, between Savoy and Piedmont, over which the highway from Gencva to Turin lies, is as high, if not higher, than the Montagnes MIaudites; but of all the monntains of the Alps, the highelt is mount Rochmelon, in Piedmont, between Fertiere and Novalefe. The roads over thefe mountains are very tedions, difagreeable, and dangcrous, efpecially as huge mafles of finow, called by the Italians
ava'ancles,
aualanches, and fragments of rocks, frequently roll down into them from the impending precipices. The way of travelling is either in Iledges, clairs, or on the backs of mules: in fome places the path on the brink of the precipices is fo narrow, that there is but juft room for a lingle perfon to pafs. It begins to fnow on thefe mountains commonly about the beginning of Oc . tober. In fummer, in the months of July, Auguf, and September, many of them yicld very fine grais, with a great variety of fowers and herbs; and others box-wood, waluuts, chefnuts, and pines. The beight and different combinations of thefe mountains, their towering fummits rifing above one another, and covered with fnow the many catarats or falls of water, the noile and rapidity of the river Arc, the froth and green tindure of its water, the echoes of its numerous itreams tumbling from cliff to cliff, form altogether a very romantic fcene. Thefe mountainous trakts, notwithtanding their height, are not altogether free from thunder in fummer, and are alfo much expofed to thick clouds, which fometimes fetule unexpectedly on them, and continue feveral days. There are fome wolves among the thickets; and they abound with hares, rupicapras or chamois, and marmottes. In the lower parts of Savoy, there are alfo bears, wild boars, decr, and rabbits; and among the defolate mountains are found great quantities of rock-cryftal. In the glacieres or ice-valleys, between the high mountains, the air is extremely cold, even in the months of July and Auguft. The furface of thefe ice-valleys looks like a fea or lake, which, after being agitated by fierce and contrary winds, bas been frozen all at once, interfperfed with hideous cracks and claafms. The noife of thefe cracks, when firft made by the heat of the noon day fun, and rewerberated by the furrounding rocks and mountains, is aftonifhing. The height of the impending mountains is fuch, that-the fun's rays feldom reach the ice-raileys, except a ferw hours in the midalc of fummer. The avalanches or frow balls, which the leaft concuftion of the air will occafion, tumble down the mountains with amazing rapidity, continually increafing, and carrying all before them. People have been taken out alive, after being buried feveral days under them. The mountainous nature of this duchy readers the plough an ufelefs inftument of agriculture. The peafants break up the hungry foil with the pickaxe and fpade, and to improve it carry up mould and dung in bafkets. For the purjofe of preferving it from drought in the fpting and funmer, they cut imall refervoirs above it, the water of which may be let out at will; and to prevent the earlh frons giving way, breat the declivity of the mountains by building walls on the fide for its fupport, which frequently affume the appearance of anciemt fortification, and are a very pleafing deception to travellers. The Savoyards carry their better fort of checfe intn Piedmont, as the flavour is much efteemed there; but they gain more by their ikins of be.trs, chamois, and bouquetins (afpecies of the vild go:ti), or by the fale of growfe and pheafants, which they carry in great numbers to 'Turin.

The chief ivers are the Rhone, which, on the fide of Geneva, feparates Savoy from Frince; the Arve, which has fine forticles of gold in its fands; the leere, the Scran, the Siers, and the Are. There are alfo a great many lates in this country, which yicld
plenty of fifh, but none of them are vers large, t: ze- \(v\) vy ther with medicinal and reciprocating \(f_{d}\) rings a id hot suurin. baths.

The language of the common people is a enrrupt French; but the better for:, and thofe who live in :' c great cities, fpeak as good French as they do in 1'ar s itfelf.

In their temper, however, and difpofition, the S , voyards refemble the Germans more than the French. retaining full much of the old German tonelly and fimplicity of manners, which no doubt is paarly owing to the poverty and barrennefs of the country. To this alfo, joined to their longevity and the fruiffulnefo of their women, which are the effeets of their cheerful difyofition, healthy air, activity, temperance, and fobriety, it is owing that great numbers of them are obliged to go abroad in quelt of a livelihood, which they carn, thofe at lealt who have no trades, by fowing marmottes, cleaning fhoes, fweeping chimneys, and the like. It is faid, that there are generally ab jut 18,000 of them, young and old, about Paris. In flummer they lic in the ftreets, and in winter, furty, fifty, or fixty of them lodge together in a room: they are fo honeft that they may be trulted to any amount. The children are often carried abroad in baikets before they are able to walk. In many villages of Savoy there is hardly a man to be feen throughout the year, excepting a month or two. Thofe that have families gencrally fet out and return about the fame feafon, when their wives commonly lie in, and they never fail to bring home fume part of their fmall earnings. Some of them are fuch confummate mafters of economy, that they fet up fhops and nuake fortunes, and others return home with a competency for the ref of their days. An old man is often difpatched with letters, little prefents, and fome money, from the younger fort, to their parents and relations, and brings back with him frefla colonie-, letters, meffages, and news. The cultivation of their grounds, and the reaping and gathering in of the harveft and rintage, are generally left to the women and children; but all this is to be undertood of the mnurtainous parts of Savoy. Great numbers of the mour.taineers of both iexes are faid to be lame and deformed; and they are much fubjeat to a kind of wens, which grow about their throats, and very much disfigure them, efpecially the women; but that is the only inconvenience they feel from them.

The nobility of Savoy, and the other dominiuns if the king of Sardinia, labour under great hardhips and reftrittions, unheard of in other countries, which we have not room here to particularize. A minute acentu.: cf then will be found in Mr Key her's Travels. In flort, the king has left neither liberty, power nor much property, to any but himfelf and the clerge, whofe overgrown wealth he has alfo greatly curtailed.

No cther celigion is profeffed or thlerated in Savoy but that of the chureh of Rome. The decrecs, hum: ever, of the council of Trent are not admited; nut are the churches afylums for malefactors.

This duchy is divided into thofe of Chablais, Generois, and Savoy Proper, the counties of Tarantai.e and Maurienne, and the barony of Exucigny:

SAURIN (James), a celebrated p' eacher, was bern at Nifmes in 1677 , and was the fon of a protentant 1 inyer of confiderable emineace. Ine appiied to lis thaies

\section*{\(S A G\)}

Burin. wil? great fuccefs; but at length being captivated with a mititary life, he relinquifhed them for the profeffion of arms. In \(169+\) he made a campaign as a cadet in lord Galloway's company, and foon afterwards obtained a pair of colours in the regiment of colonel Renault which ferved in Piedmont. But the duke of Savoy having made peace with France, he returned to Geneva, and relumed the nudy of philofophy and theology under Turretin and other profelfors. In 1700 he vifited 1 Itlland, then went to England, where he remained for feveral ycars, and married. In 1705 he returned to the Hague, where he fixed his refidence, and preached with the mott unbounded applaufe. To an exterior appearance hizhly prepoffeffing, he added a frong harmonious vice. The fublime prayer which he recited before his fermon was uttered in a manner highly affecting. Nor was the attention excited by the prayer diffipated ty the fermon: all who heard it were charmed; and thefe who came with an intention to criticife, were carricd along with the preacher and forgot their defign. S.utin had, however, one fault in his delivery; he did not manage his voice with fufficient fkill. He exlautted himfelf fo much in his prayer and the beginning of his fermon, that his voice grew feeble towards the end of the fervice. His fermons, efpecially thofe publifhed during his life, are dintinguifhed for juttnefs of thought, force of reafoning, and an eloquent unaffected Ityle.

The firt time that the celebrated Abaddie heard him preach, he exclaimed, "Is it an angel or a man who lpeaks?" Saurin died on the 30 th of December, 1730 , aged 53 years.

He wrote, I. Sermons, which were publifhed in 12 vols 8 vo and 12 mo ; fome of which difplay great genius and eloquence, and others are compofed with negligence. One may obferve in them the imprecations and the averfion which the Calvinits of that age were wont to utter againt the Roman Catholics. Saurin was, notwithftanding, a lover of toleration : and his fentiments on this fubject gave great offence to fome of his fanatical brethren, who attempted to obfcure his merit, and embitter his life. They found fault with him becaufe he did not call the pope Anticbrin, and the Romifh church the whore of Babylon. But thefe prophetic metaphors, however applicable they may be, were certainly not irtended by the benevolent religion of Jefus to be bandied about as terms of reprrach ; which would teach thefe to rail who ufe them, and irritate, without convincing, thofe to whom they were applied.
Saurin, therefore, while he perhaps interpreted thefe metaphors in the tame way with his oppofers, difcovered nore of the moderation of the Chriftian fpirit. Five volumes of his fermons were publifhed in his life, the reit have been added fince his deceafe.
2. Difcourles Hiforical, Critical, and Moral, on the noolt memorable Events of the Old and New Teflament. 'lhis is his greatef and moft valuable work. It was yrinted firt in two volumes folio. As it was left unfinifhed, Beaufobre and Roques undertook a continuation of it, and increated it to four volumes. It is full of learning: it is indeed a collection of the opinions of the beftauthors, buth Chrifian and Heathen ; of the phiturphers, hiftorians, and critics, in every fubjeat which the author cxamines. 3. The State of Chrifiamiis in France, 1725, 8vo. In this book he difcuffes
many important points of controverfy, and calls in queftion the truth of the miracle faid to be performed

Saurin. on La Folle at Paris. 4. An Abridgment of Chriftian Theology and Morality, in the form of a Catechiim, 1722, 8vo. Hz afterwards publifhed an atridgment of this work.

A Dillertation which he publifhed on the Expediency of fometimes dilgnifing the Truth, raifed a multitude of enemies againt him. In this difcourfe his plan was, to falte the arguments of thofe who affirm that, in certain cafes it is lawful to difguife truth, and the anfivers of thofe who maintain the contrary. He does not determine the queftion, but feems, however, to incline to the firt opinion. He was immediately attacked by feveral adverfaries, and a long controvery enfued; but his doctrines and opinions were at length publicly approved of by the fynods of Campen and of the Haguc.

The fubject of this controverfy has long heen agitated, and men of equally good principles have fupported oppotite tides. It would certainly be a dangerous naxim that fallhood can ever be lawful. There may, indeed, be pasticular cafes, when the motives to it are of fuch a nature as to diminifh its criminality in a high degree; but to lefien its guilt is a very different thing from juftifying it by the laws of morality.

Sauris: (Jofeph), a geometrician of the academy of Sciences at Paris, was born at Courtoufon in the principality of Orange, in 1659 . His father, who was a minifter at Grenoble, was his firt preceptor. He made rapid progrefs in his ftudies, and was admitted minifter of Eure in Dauphiny when very young: but having made ufe of fome violent expreffions in one of his fermons, he was obliged to quit France in 1683 . He retired to Geneva, and thence to Berne, where he obtained a confiderable living. He was fcarcely fettled in his new habitation, when fome theologians raifed a perfecution againft him. Saurin, hating controverfy, and difgufted with Switzerland, where his talents were entirely concealed, repaired to Holland. He returned foon after to France, and furrendered himfelf into the hands of Boffuet bifhop of Meaux, who obliged him to make a recantation of his errors. This event took place in 1690. His enemies, however, fulpected his lincerity in the abjuration which he had made. It was a general opinion, that the defire of cultivating fcience in the capital of France had a greater effect in producing this change than religion. Saurin, however, fpeaks of the reformers with great afperity, and condemns them for going too far. "Deceived in my opinions concerning the rigid fyftem of Calvin, 1 no longer regarded that reformer in any other light hat as one of thofe extravagant geniufes who are carried beyond the bounds of truth. Such appeared to me in general the founders of the reformation; and that juft idea which I have now obtained of their character has enabled me to flake off a load of prejudices. I faw in moft of the articles which have feparated them from us, fuch as the invocation of faints, the womip of images, the diftinction of meats, \&.c. that they had much exaggerated the inevitable abufes of the people, and imputed thele to the Romifh church, as if fanctioned by its doatrines. Befides, that they have mifreptefented thofe dectrines which were not connected with any abufe. One thing which furprifed me much when my ejes began toopen, was the falfe idea, though in appearance

\section*{Eourin}
full of refpect, for the word of Goi, which the reformers entertained of the perfection and perfpicuity of the Holy Seriptures, and the manifert mifinterpretation of parlages which they bring to fupport that idea (for that mifinterpretation is a p pint which can be proved). Two or three articles thill railed fome objcaions in my mind againtt the Romifh church; t wit, Tranfubfantiation, the adoration of the facrament, and the infallibility of the church. The adoration of the facrament I conlidered as iblolatiy, and, on that account, icmoved from her communion. But fon after, the Expafition of the bifhop of Meaux, a work which can never be fulficiently admired, and his Treatife concerning chanzes, revarfed all my opinions, and rendered me an encms to the Reformation." It is faid alfo, that Saurin appeafed his confcience by reading Poirct's Cogitationes rationales. This book is writen with a view to vindicate the church of Rom: from the chaige of idnlatry.

If it was the love of diftinction that induced Saurin to return to the Romilh church, he was not dilippointed: for he there met with procection and fupport. He was favourably received by Louis XIV. obtained a penfion from him, and was treated by the Acaldemy of Sciences with the moit flattering refpeet. At that time (1717), geometry formed his principal occupatim. He adorned the Tournal des Savans with many excelient treatiles; and he added to the memeirs of the Academy many interefting papers. Thefe are the only works which he has left behind him. He died at Paris on the 2gth December 1737 , in his 78 th year, of a fever. He married a wife of the family of Croufas in Switzerland, who bore him a fon, Bernard Jofeph, diftinguifhed as a writer for the theatre.

Saurin was of a bold and impetwous fpirit. He had that lofty deportment which is generally mifaken for pride. His philufophy was autere; his opinions of men were not very favourable; and he often delivered them in their prefence: this created him many enemies. His memory was attacled after his deceafe. A letter was printed in the Mercure Suitfe, faid to be written by Saurin from laris, in which he acknowledges that he had committed feveral crimes which deferved death. Some Calvinift minifters publifhed in 1757 two or thice pamphlets to prove the authenticity of that letter; but Voltaire made diligent enquiry not only at the place where Saurin had been difcharging the facerdotal office, but at the Deans of the elergy of that department. They all exclaimed againf an imputation fo opprebrious. It nuft not, however, be concealed, that Voltaire, in the defence which he has publifhed in his general hifory of Saurin's condur, leaves fome unfavourable impref: foons upon the reader's mind. He infinuater, that Saurin facrificed his religion to his interelt ; that he played upan Boffuet, who believed he had converted a cletgyman; when he had on!y given a little fortune to a philofopher.

SAURURUS, in iotany: A genus of the tetragynia order, belonging to the heptandria clafs of plants: ond in the natural method ranking under the fecond order, Piferit.s. The calys is a catkin, with unifurons feales: there is no corvila ; there are four germina, and four monofipermnus berres.

SAUVAGESIA, in botany: A genus of the monngyinia order, belonging to the pentandria clats of गlants; and in the natural method lanking with thofe
for. XII.
of which the order is doubtful. The corolla is peritz. S-uveur petalous and fringed ; the calyx pentaphyllcus ; \(t\) on \(n=-\) tarium the fame, having its leaves placed alsernately with the p.t.ls; the capfule unilocular.

SAUVEUR (Jufepli), an eminent French mati.e. matician, born at La lileche in \(16 ; 8\) He was absolutely damb until be was feven y cars of age; and even then his organs of feech did not difengage themfelves fo fredy, hut that he was ever after obliped to fpeat: with great deliberation. Mathematics were the cult; Audies he had any telifh for, and thefe he cultivated witi extraordinary fuccefs; fo that he commenced teacher at 20 years of age, and was fo foon in v gus,

He ferved his firt campaign in the army commandeld by prince Eugene and the duke of Marlborough, when only twelve years old. He fignalized himeti' at the fieges of Tournay and Mons, and paricularly at the battle of Malplaquet. In the evening of that memorable day, he was heard to fay, "I'mi content with my day's work." During the campaign of 1710 , prince Eugene and the duke of Marlborough made many public encomiums on his merit. Next year the youner count accompanied the ling of Peland to the fiege of Stralfurd, the ltrongeft place in Fomerania, and cifplayed the greatel intrepidity. He fwam acrofs the river in fight of the enemy, with a piflol in his hand. His valour thore no lefs cunlpicuous on the bloody day of Gacdelbufck, where he commanded a regiment of cavalry. He had a borfe killed under hin, after lee had three times rallied his regiment, and led them on to the charge.

Soon alier that campaign, his mother prevailed on him to marrs the countelis of Lubin, a lady both rich and beautibil. This union iated but a flont time. In \(1 / 21\), the cunnt procured a dififlution of the marriage :

Count Saxe, thus fript of his territories, devoted limfelf for fome time to the fuady of mathematics. He compofed alfo, in 13 nights, and during the intervals of an ague, his Reveries, which he corrected afterwards. This book is written iu an incorrect but forcible ftyle; it is full of remarks both new and profound, and is cqually ufeful to the foldier and the general.

The death of the king of Poland his father, in 1733, kindled a new war in Europe. His brother, the elector of Saxony, offered him the command of all his forces, but he preferred the French fervice, and repaired to the marechal of leerwick's arniy, which was encamped on the Rhine. "Count," faid that general, who was preparing to attack the enemy's entrenchments at Etlinglen, "I was going to fend for 3000 men, but your arrival is of more value than theirs." When the attack began, the count, at the head of a regiment of grenadiers, forced the enemy's lines, and by his bravery decided the victory. He behaved at the fiege of Philipfburgh with no lefs intrepidity. For thefe fervices he was, in 1734, rewarded with the rank of lieutenant.general. Peace was concluded in 1736 ; but the death of Charles VI. emperor of Germany kindled anew war almoft immediately.

Prague was befieged by the count of Saxe in 1741 , near the end of November, and taken the fame month by affault. The conqueft of Egra followed that of Prague. It was taken a few days after the trenches were opened. This fuccefs gave fo much joy to the Emperor Charles VII. that he wrote a congratulatory letter to the conqueror with his own hands.

In 1744 he was made marechal of France, and commanded a part of the French army in Flanders. During that campaign he difplayed the greatef military conduct. Though the enemy was fuperior in number, he oblerved their motions fo filifully that they could do nothing.

In January 1745 , an alliance was concluded at Warfovia between the queen of Hungary, the king of Engiand, and the States of Holland. The ambaflador of the States General, meeting marechal Saxe one day at Verfailles, afked his opinion of that treaty. "I think (fays he), that if the king my mater would give me an unlimited commiffion, I would read the original at the Hague before the end of the year." This anfwer was not a bravado; the marechal was capable of performing it.

He went foon after, though exceedingly ill, to take the command of the French army in the Low Coun-, tries. A gentleman, feeing the feeble condition in which he left Paris, afked him how he could in that fi-. tuation undertake fo great an enterprife? "The queftion (replied he) is not about living, but fetting out."Soon after the opening of the campaign, the battle of Fontenoy was fought. Marechal Saxe was at the point of death, yet he caufed himfelf to be put into a litter, and carried round all the pofts. During the action he mounted on horfeback, though he was fo very weak that his attendants dreaded every moment to fee him expire. The vilory of Fontenoy, owing entirely to his vigilance and capacity, was followed by the reduction. of Tournay, Bruges, Ghent, Oudenarde, Oftend, Ath, and Brulfels: this laft city was taken on the 28th February 1746; and very foon after the king fent to the mareclal a letter of naturalization conceived in the molt flattering

\section*{Baxe.}
flattering kerms. The fucceeding campaigns gained him additional honours. After the vitory of Raucoux, which he gained on the wth Ottober 1746 , the king of France made him a prefent of fix pieces of cannon. He was, on the I 2th of January of the following year, created marechal of all the French armies, and, in \(17+8\), com . mander-general of all thofe parts of the Netherlands which were lately conquered.

IInlland now hegan to tremble for her fafety, Maefricht and Bergen-op-Zoom had already fallen, and nothing but misfurtunes leemed to attend the fuither profecution of the war. 'The States General, therefore, ofo fered terms of peace, which werc accepted, and a treaty concluded on the 18 h Oqober \(17+8\).
Marechal saxe retired to Chambord, a conntry feat which the king of France had given him. Sume tinne after he went to Berlin, where the king of Pruflia reccived him as Alexander would have received Cafar. On his return to \(F\) ance, he fpent his time among men of learning, artifs, and philofophers. He died of a fever, on the 30 th November 1750, at the age of 54.

Some days before his death, talking to M. Senac his phyfician about his life, "It has been (fays he) an excellent dream." He was remarkably careful of the lives of his men. One day a general officer was pointing out to him a poft which w.uld have been of great ufe. "It will only cont you (fays he) a dozen grenadiers." "That would do very well," replied the marechal, "were it only a dozen lieutenant-generals."

It was impolible for marechal S.xe, the natural brother of the kirg of Poland, elected fovereign of Courlund, and poffeffed of a vigorous and reftlefs imagination, to be deflitute of ambition. He conftantly entertained the notion that he would be a king. After lofing the crown of Ruffia by his inconftancy in love, he formed, it is faid, the project of alfembling the Jews, and of being the fovereign of a nation which for 1700 years had neither poffeffed chief nor conutry. When this chimerical idea could not be realized, he caft his eyes upon the kingdom of Corfica. After failing in this project alfo, he was bufily employed in planning a fettlement in fome part of America, particularly Brazil, when death furprifed him.

He had been educated and died in the Lutheran religion. "It is a pity (faid the queen of France, when fhe heard of his death) that we cannot fay a fingle De profundis (prayer for the dead) for a man who has made us fing to many Te Deums:" All France lamented his death.

By his will, which is dated at Paris, March 1,1748 , he diretted that his body fhould be buried in quicklime : "that nothing (fays he) may remain of me in this world but the remembrance of me among my friends." Thefe orders, however, were not complied with; for his body was embalmed, put into a leaden coffin, which was inclofed in another of copper, and this covered with one of wood, bound about with iron. His heart was put into a filver gilt box, and his entrails into another coffin. Louis XV. was at the charge of his funcral. By his order his corpfe was interred with great pomp and Splendor in the Lutheran church of St Thomas, at Strafourgh, on the Sth of February 1751.

The marechal was a man of ordinary ftature, of a robuft conftitution, and extraordinary frength. To an
afpect, noble, warlike, and mild, he j-ined the excel- Strifaga. lent qualties of the heart. Affable in his manners, and difpofed to fympathice with the unfurtunate, has gencrotity fometimes carred hins beyond the limits of his fintune. On lis deathobed he reviewed the errors of his lite with remoric, and expreffed much penitence.

The beft edition of his Reveries was printed at Paris 1757 , in 2 vols 4.10 . It was compared with the greatelt attention with the original manufcript in the king's library. It is accompanied with many defigns exactly engraved, and a life of the anthor. The Life of marcchal Saxe was writen by M. d'Efpagnac, 2 vols. 12 mo . This hittory is written in the panegyrical nyle. The auther is, however, impartial enongh to remark, that in the three battes upon which the reputation of marechal Sax: is fi unded, hee engaged in the moft favourable circumftances. "Never did a general (fays he) Itand in a more advantageous fituation. Honoured with the conidence of the king, he was not reftrained in any of his projects. He always commanded a numerous army: his foldiers were Ready, and his officers poffeffed of great merit."

SAXIFRAGA, Saxifrage, in botany: A genus of the digynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the \(13^{\text {th }}\) order, Succulentio. The calyx is quinquepartite: the corolla pentapetalous; the capfule biroftrated, unilocular, and poly ipermous.

There are 38 feecies; of which the moft remarkable are, I. The granulata, or white faxifrage, which grows. naturally in the meadows in many parts of England. The roots of this plant are like grains of corn, of a reddifh colour without; from which arife kidney-fhaped hairy leaves, Itanding upon pretty long footftalks.The falks are thick, a font high, hairy, and furrowed: thefe branch out from the bottom, and have a few fmall leaves like thofe below, which fit clofe to the falk: the flowers terminate the falk, growing in fmall clufters; they have five white petals, inclofing ten ftamina and the two Ayles. There is a variety of this with double flowers, which is very ornamental. 2. The pyramidata, with a pyramidal ftalk, grows naturally on the mountains of Italy. The leaves are tonguc-fhaped, gathered into heads, rounded at their points, and have cartilaginuus and fawed borders. The falk rifes two feet and a lialf high, branching out near the ground, forming a natural pyramid to the top. The flowers have five white wedge-fhaped petals, and ten ftamina, placed circularly the length of the tube, terminated by roundifh purple fummits. When thefe plants are frong, they produce very large pyramids of flowers, which make a fine appearance. 3. The punstata, commonly called London pride, or nonefo.prefly, grows naturally on the Alps, and alfo in great plenty on a mountain of Ireland called Mangerion, in the county of Kerry in that ifland. The roots of this are perennial ; the leaves are oblong, oval, and placed circularly at buttom. They have broad, flat, furrowed footfalks, and are deeply crenated at their edges, which are white. The falk rifes a foot high, is of a purple colour, fitf, fleoder, and hairy. It fends out from the fide on the upper part feveral fhort footfalks, which are terminated by white flowers fpotted with red. 4. The oppofitifolia, grows natural.

Cose, Suxniv.
ly on the Alps, Pyrences, and Heivctian mountains: It is alfo found pretty plentifully growing upon Ingleborough hill in Yorkfhire, Snowdon in Wales, and forme other places. It is a peremnial plant, with Italks trailing upon the ground, and are feldom more than two inches long, garnifhed with fmall oval leaves ftanding rppofite, which lie over one another like the feales of filh: they are of a brown-green colour, and have a refomblance of heath. The flowers are produced at the end of the branches, of a deep blue; and thus make a pretty appearance during their continuance, which is great part of March and the beginning of April. All theie fecies are eafly propagated by offsets, or by partins their roo's.

SaXO Grammaticus, defcended from an illuftrious "nae'sTra- Danifh (A) family, was born about the middle of the 12 th rels into century. Stephens, in his edition of Saxo-Grammaticus, 1)=nmark. printed at Soroë, indubitabiy proves, that he muf have bees alive in 155 , but cannot afcertain the exact place and time of his birth. See Stephens's Prolegomena to the Notes on Saxo-Grammaticus, p. 8, 1024 ; alfo Holherg, vol. i. p. 269. ; and Mallet's North. Antiq. vol. i. p. 4. On account of his uncommon learning, Saxo was difinguifhed by the name of Grammaticus. He was provolt of the cathedral church of Rofkild, and warmJy patronized by the leatned and warlike Abfalon, the celebrated asclibifop of Lunden, at whofe inftigation he wrote the Hiftory of Denmark. His epitaph, a dry panegyric in bad Latin verfec, gives no account of the era of his death, which lappened, according to Stephens, in 1204 . His hiftory, confifting of 16 books, begins from the earlieft account of the Danith arnals, and concludes with the jcar 1180 . According to the
Ifowerg. opinion of an accurate writer, the firlt part, which relates to the origin of the Danes, and the reigns of the ancient kings, is full of fables; but the eight lat books, and particularly thofe which regard the events of his own times, deferve the utmolt credit. He wrote in Latin; the fyle, if we confider the barbarous age in which he tlourifhed, is in general extremely elegant, but sathe: too poetical for hiltory. Mallet, in his Hiffoire de D.imanarc, vol. i. p. \(18:\), fays, "that Sperling, a writer of great erudition, has proved, in contradiction to the affertions of Stephens and others, that Saso. Grammaticus was fecretary to Abfulon; and that the 3 axo provolt of Rofkild was another perfon, and lived carlier."

SSXONY, the name of two circles of the German empire, in electorate, and a duthy of the fime The lower circle is bounded to the fouth by the circle of Up. per Sax ny, and a part of that of the Upper Rhine; in the north, by the duchy if Slefwick, belonging to the king of Denmark, and the Baltic ; to the welt, by the circle of Wellphalit and the north feas and to the aft by the circle of Upper Saxony. The Ataces lelonging to it are the dukes and princes ol Magdehurg and Breme:, Zell, Gruberhagen, Calenburg, Wolfenbuitle, Hulberladt, Mecklenbury-Schwerin, Necklenburg. Guftro, Holfteia-Glackifadt, Holfein Gott if,

Hildefheim, Saxe-Lawenburg: the archbifloppic of Lubeck; the principalities of Schwerin, Ratzeburg, Blankenburg, Ranzau; the Imperial citics of Lubeck, Gotzlar, Mublhaufen, Nordhaufen, Fiamburg, and Bremen. The dukes of liremen and Magdeburg are alternately directors and fummı nine princes; but, ever fince the jear 1682 , the diets which ufed generally 10 be held at Brunfwick or Lunemburg have been difon. tinued. Tuwards the army of the empire, which, by a decree of the empire in 1681 , was fettled at 40,000 men, this circle \(w\) as to furnith 1322 horfemen and 2707 foot ; and of the 300,000 florins granted to the impe. rial cheft in 1707, its quota was \(3^{1,271}\) florins; both which affeffments are the fame with throfe of Upper Saxony, Burgundy, Swabia, and Weflphalia. This circle at pretent nomina:es only two affefurs in the chamberjudicatory of the empire, of one of which the elector of Brunfwick-Lunenburg has the nomination, who mult be a Lutheran, and is the ninth in rank. The inhabitants of this circle are almoft all Lutherans.

The eircle of Upper Sixony is bounded by that of Franconia, the Upper Rhine, and Lower Saxony ; and allo by the Baltic fea, Piulia Poland, Silefir, Lufatia, and Bohemia. It is of great extent, and contains the following Itates, viz. the electors of Saxony and Brandenburg, Saxe-Weimar, Saxe-Eifenach, Saxe Cobourg, Saxe-Gotha, Saxe Altenburg, Saxe-Querfurt, the Hither and Farther Pomerania, Camin, Änhalt, Quidlenburg, Gernrode, Walkenried, Schwarzburg, Sonderfhau. fer, Schwarzburg-Rudoliladt, Mansfeld, Stolberg, Barby, the counts of Reulfen, and the counts of Schonberg. No dets have been held in this circle fince the year 1683. The elector of S:uxony has always been the fole fummon. ing prince and directi \(r\) of it. Mnft of the inhabitants pro'efs the Proteitant religion. When the whole empire furnithes 40,000 men, the quota of this circle is 1322 horle and 2,707 foot. Of the 300,000 floins granted by the en, pire in 1707 , it contributed only 31,271 florins, 28 kruitzers, being rated no higher than thefe of Wellphalia, Lower Saxony, Swabia, and Burgundy, though it is much larger. Agreeable to a refitution and regulation in 1654 , his circle nominates now only two atheflors of the chamber court.

The electorate confilts of the duchy of Saxony, the greatelt purt of the margravate rif Milen, a pait of the V.ngtland, and the nouthern half of the landgravate of Thuringia. The Lufatias afo, and a part of the cou try of Henneberg, belong to it , but are no part ot this rinele. The foil of the electeral dominions lying in this circle is in yeneral excecding rich and frutful, yielding corn, truits, and pulfe in abundance, together with hups, fdx, hemp, tobaced, anitied, wild faffron, word; and in i nic places woad, wine, coals, porcelain: clay, terra figillata, tullers earth, fine hiver, various forts uf beatitul ma ble, ferpentine fone, and almoft all the different fpecies of precious fiones. Sulphur alfo, alum, vitrin], fand, a. I free-ftonc, fali-fprines, amber, turf, cinnabir, quick filver, autimony, bimuth, arfenic, cobat, and other monerals, ane found in it. This, countrys.
(A) Snme authors have e roneouny conjeftited, from his nanie Sixn, that he was binn in Six ny, but Saxe was no unconım^n ap'p lla:ion among the ancient Danes. Sce Olaus Wurmius Monumenta Dania, p. iSG, and Stephano's Próegonina, p. ıо.

S:rony.
 country, beftes the above articles, cortans likewife valuable mines of filver, copper, tin, lead, and iron; and abounds in many plues with horned cattle, fheep, hosfes, and venifon. The principal tivers by which it is watered are the Elbe, the Schwerze-Eliter, the Mulde, the Sasic, the Unftut, the Welfe-Elfer, and the Picile. Thefe rivers, as well as the lakes and rivulets, abound in fith; and in the Whice-Elter are found beantial pearls. This cleforate is extremely well cultivated and inlabited, and is faid to include about \(2 ; 0\) rreat and fimall trums, upwards of 5000 rillages, 196 royal ma. nors, and near as many royal calles, befides pivate eftites, and commanderies. The provincial diets here conlitt of three clales. "The firlt is compored of the prelates, the counts, and lords, and the two univerfities of Leiplic and Wittenberg. To the fecond belong the nobility in general, immediate or mediate, that is, fuch as fland immediately under the fief-chancery or the aulic judicatoriss, and fuch as are immediatels under the jurifdiction of the amtman. The third clafs is formed of the tuwns in general. The general provincial diets are ordinarily held every fix gears; bur there are others called filegion diefs, which are convened commonly cvery two years. We wonld here obferve, that not on1s thefe diets, but thofe in moft of the other llates of Germany, are at prefent extremely infignificant and unimpretant, retaining litte more than the fhadow of their former powet and privileges; for even the pety princes, though they depend upon their more potent neighbours, and mutt be careful no. to give them any umbrage, are almoft is abfoluce in their refpective territories as the grand feignior himfelf. As to religion, it was in this country that the reformation took its rife in the 16 th century, 10 which it hath ever fince adhered, according - SeRe to the doctrines of Lather*. Tlie two late clectors, formation, when they embraced Popery in order to qualify themar 8. felses in be elested kings of Poland, gave the noon fo- lemn affurances to their people, that they would inviolably maintain the eftablifhed religion and its profefors in the full and free enjoyment of all their ecclefiaftical rights, privileges, and prerogatives thatfoever, in regard to churches, worfhip, ceremonies, ulages, univerlitie?, frhools, benefices, incomec, profits, jurifdictions, and imnunities. The elestoral families tlill continue Roman Catholics, though they hove loft the crown of Poland, for which they at fult ensbaced Pupery: With ref. pect to ecclefialtical reatters, the conntry is divided in. to parifhes, and thefe again into fpiritual infpeetivas and confiftories, all fubordinate to the ecclefiaftical council and upper confftory of Dreflen, in which city and Leipfic the Caivinifts and Ronan Catholics enjoy the free excrife of their religion. Learning flonrifhes in this eleds rate; in which, befides the frec-fichols and symnatia in moft of the chief towns, are the two celelirated unverlities of Witienburg and Leipzig, in the laf of which are alfo, fucieties frer the liberal arts and the German languige, with bookfellers and printers of the greatell eminence. Agreat variery of manu fotures are rllo carried on in this country. "The princip.l are thefe of line and coarle linen, thread, fine lace, paper, fi e glatles and mimers; pircelain, equal if rint fupe. + See Pur-tiort that wi Chinat ; ir 'n, bras, and fteel wares; marela.n,
\(4^{2}=3,24\). neraclures of gold and filver, coten, woul, and filk ; g̈loves, caps. hats, und i peltry : in whach, an ! the nitteral production.s mentioned abosc, tog ther with dye-
ing, an important forcisn cemmerce is carried ca. A great add tion has been made fince the year 1718 to the clectural territories, by the exanction of the colla:cral brancles of Zertz, Mericburg, and Weitentels, whote d minions devolved to the iver electo:al brasch. defcended fom the margraves of Melfen. The fi: it of thefe, who was eicetor of Samory, was Frederick it.e Warlike, about the beginning of the 1 sth century.
"'iais elector ftyles himfelt duke of Sasurnv, Juitere, Cieve, and Berg, as alfo of Engern and Wefphalia, arch-marfhal and clector of the LIoly Roman empirc, landgrave in Thuringia, margrave of Meiflen, and of Upper and Lower Lufatis, hurgrave of Migdeburg, princely count of Henneberg, count of La Mark, RavenBerg, Barly, and Hanau, and lord of Ravenfein. Among the electors he is reckoned the fistin, as great-marthal of the empire, of which he is alto ricar, duting an interregnum, in all places not fubjeet to the vicariate of the count palatine of the Rhine He is moreover fole director of the circle; and in the ex. cancy of the fee of Mentz claims the direstorium at the diet of the empire. His matriculdr affefment, on account of the clectorate, is \(198+\) florins, belides what he pays for other diftriets and icrritories. To the cham-ber-courts he contribotes, each term, the fum of 1545 rix-dollars, together with 83 rix-doll:urs and 62 kruitzers on account of the connty of Mansfeid. In this electorate, fubordinate to the privg-council, are various colleges for the depastments of war, foreign affairs, the finances, fiefs, mines, police, and ecclefiaftical nffairs, 10 . gether with high iribunals and courts of juliice, to which appcals lie from the inferior. Ihe revenues of thi clector are as confiderable as thofe of any prince in the empire, if we except thofe of the houfe of Austria. Thes arife from the ordinary and extraordinary fubfodies of the flates; his own demefnes, confifing of 72 bailwics; the impon on beer, and the fine porcelain of the country; tenths of corn, fruit, winc, \&ic. his own filver mines, and the tenths of thofe that belong to particuiars: all which, added together, bring in a yearly revenue of betwist 700,0001 . and \(800,0 c 0\). yet the cleftotate is at prefent deeply in debt. The regular tronps commonly amount to 20,000 men, exclulive of the militia of the ban, the arriere-ban, and the body of miners and lunters, who are cbiiged in time of war to bear arms. The whole electorate is divided intn circles.
'The electoral circle, or the duchy of Sasony, is bounded by the circles of Meiffen, Leipzig, and 'Thneringi.t, the principality of Anhalt, the marche of Brandenburg, and Lufitm. The principality of Anhalt lics acrofs it, and divices it into two parts. Its greateft length and boeadth is computed at about 40 miles; but though it is watered by the Elbe, the Black. Elfar, and the Mulde, it is not very fruitul, the foil for the mon part conflting of fand. It contains \(2+\) towns, three borougls, betwixe 400 and 500 villages, \(16+\) nnblemen's eflates, if fupe:inendencies, three ir.fpectinns, under one confiftry, and 11 p:efecturaees or difticts. The prefent duchy of Saxnny is nu to be counfounded with the n!d ; for the latter was of a much gieater cxtont, and cmitained is it thofe lirge trais anciently call. d Lapt, holiz, Eneerr, and Weptailit, of which the clectoral circle was no pa:t, but "a.taken bv dibert the Dear, margrave of Salcwedel, from the Venedi. His
fon Bernard obtaining the dignity of duke of Saxony from the emperor Fircderic I. the name of duchy was given to this country; and the eleforial dignity having been afterwards amexed to the duchy, it acquired thereby alfo the name of the elecoral circle.

The country of Saxony is remarkable for being the mother of the prefent Englifh nation; but concerning the Saxons themfelses, previous to that period, we have very few particulars. The Saxons (iays Mr Whitaker) have been derived by our hifforians from very different parts of the globe; India, the north of Afia, and the torefts of Germany. And their appellation has been equally referred to very different caufes; the name of their Indian progenitor, the plundering difpofition of their Aliatic fathers, and the thort hooked weapons of their warriors. But the real origin of the Saxons, and the genuine derivation of their name, feem clearly to be theie.

In the earlier perind of the Gallic hiftory, the Celta of Gaul croffed the Rhine in confiderable numbers, and planted various colonies in the regions beyond it. Thus the Volcx Tectofages fetted on one fide of the Hercynian foreft and about the banks of the Neckar, the Helvetii upon another and about the Rhine and Maine, the Boii beyond both, and the Senones in the heart of Gernany. Thus alfo we fee the Treviri, the Nervii, the Suevi, and the Marcomanni, the Quadi, the Venedi, and others, in that country; all plainly berrayed to be Gallic nations by the Gallic appellations which they bear, and all togecher poffelfing the greateft part of it. And, even as late as the conclufion of the firlt century, we find one nation on the eaftern fide of this great continent actually fpeaking the language of Gaul, and another upon the northern ufing a dialect nearly related to the Britifh. But as all the various tribes of the Germans are confidered by Strabo to be zevn toor [axata, or genuine Gauls in their origin; fo thofe particularly that Jived immediately beyond the Rhine, and are afferted by Tacitus to be indubitably native Germans, are exprefsly denominated \(\Gamma \alpha \lambda \kappa \tau \alpha 1\), or Gauls, by Diodorus, and as exprefly declared by Dio to have been diftinguithed by the equivalent appellation of Celta from the earlieft perind. And the broad line of nations, which extended along the ocean, and reached to the borders of Scythia, was all known to the learned in the days of Diodorus, by the fame fignificant appellation of \(\mathrm{I} * \lambda a \tau \alpha\), or Gauls.

Of thefe, the molt noted were the Si-Cambri and Cimbri; the former being feated near the channel of the Khine, and the latter inhabiting the peninfula of Jutland. And the denominations of both declare their original : and thow them to have been derived from the common tock of the Celtæ, and to be of the fame Celtic kindred with the Cimbri of Englifh Somerfetfhire, and the Cymbri or Cambrians of Britifh Wales. The Cimbri are accordingly denominated Celice by Strabo and Appian. And they are equally afferted to be Gauls by Diodorus; to be the defcendants of that nation which facked the city of Rome, plundered the temple of Delphi, and fubdued a great part of Europe and fome of Afia.

Immediately to the fouth of thefe were the Saxons, extending from the inlmmus of the Cherfonefus to the current of the Elbe. And they were equally Cel-
tic in their origin as their neighbours. They were dcnominated Ambrones as well as Saxons; and, as fuch, are included by Tacitus under the general appellation of Cimbri, and comprehended in Plucarch under the equal one of Ciello-Scythe. And the name of Ambrones appears particularly to have been Gallic; being common to the Saxons beyond the Elbe, and the Ligurians in Cifalpine Gaul; as both found to their furprife, on the irruption of the former into Italy with the Cimbri. And, what is equally furprifing, and has been equally unnoticed by the critics, the Welfh diftinguina England by the name of Loeger or Liguria, even to the prefent moment. In that irruption thefe Saxons, Ambrons, or Ligurians, compofed a body of a more than 30,000 men, and were principally concerned in cutting to pieces the large armies of Manlius and Cæpio. Nor is the appeilation of Saxons lers Celtic thas the other. It was originally the fame with the Belgic Sueffones of Gaul; the capital of that tribe being now intitled Soi-fons by the French, and the name of the Saxons pronounced Saifen by the Wellh, Safon by the Scorch, and Safenach or Saxfenach by the Irilh. And the Sueffones or Saxones of Gaul derived their own appellation from the pofition of their metropolis on a riven, the fteam at Soifons being now denominated the Aifne, and formerly the Axon; Ueff-on or Axon importing only waters or a river, and S ueff-on or S -ax-on the waters or the river. The Sueffones, therefore, are actually denominated the \(U_{e}\) flones by P'tolemy; and the Saxones are actually iatitled the Axones by Lucan.

There, with their brethren and allies the Cimbri, having been more Iormidable enemies to the Romans by land, than the Samnites, Carthaginians, Spaniards, Gauls, or Parthians, in the fecond century applied themfelves to navigation, and became nearly as terrible by fea. They foon made themfelves known to the inhabitants of the Britifh ifles by their piracies in the northern channels, and were denominated by them Lochlyn or Lochlynach; lucd-lyn fignifying the people of the wave, and the D being quiefcent in the pronunciation. They took poffeffion of the Orkney illands, which were then merely large fhoals of fand, uncovered with woods, and overgrown with rufles; and they landed in the north of Ireland, and ravaged the country. Before the midule of the third century they made a fecond defcent upon the latter, difembarked a confiderable body of men, and defigned the abfolute fubjection of the ifland. Before the conclufion of it, they carried their naval operations to the fouth, infefted the Britifh. channel with their little veffels, and made frequent defcents upon the coaft. And in the fourth and fifth centuries, acting in conjunction with the Piff of Caledonia and the Scots of Ireland, they ravaged all the eaftern and fouth-eaflern thores of Britain, began the formal conqueft of the conntry, and finally fetted their vittorious foldiery in Lancafhire.

SAY, or SAYE, in commerce, a kind of ferge much ufed abroad for linings, and by the religious for fhirts; with us it is ufed for aprons by feveral forts of artificers, being afually died green.

SCABIOSA, Scabious, in botany : A genus of the monogynia order, belonging to the tetrandria ciafs
scuitrita of plants; and in the natural method ranking under the \(4^{\text {Rth }}\) order, Aggregata. The common calyx is polyphyllous; the proper one is double fuperior; the receptacle is paleaceous or naked. The moft remarkable fpecies are, 1. The arvenfis, or meaduw-fabious, grows naturally in many places of Britain. It hath a frong, thick, fibrous rout, fending out many brabching falks, which rife to the height of three feet; the lower leaves are fometimes almuft entire, and at others they are cut into many fegments almult to the midrib. The flowers are produced upon naked footfalks at the end of the branches; they are of a purple colour, and have a faint odour. 2. The fuccifa, or devil's bit, grows naturally in woods and moilt places. This has a fhort tap-root, the end of which appears as if it was bitten or cut off, whence the plant has taken its name. The leaves are oval and fpear-fhaped, and fmooth; the falks are fingle, about two feet high, garnifhed with two leaves at each joint ; they generally fend out two thort foct-1t:alks from their upper joint, ftanding nppofite, which are terminated by purple flowers.- Brth thefe have been recommended as aperient, fudorific, and expectorant ; but the prefent practice bas no dependence on them.

SCABRITA, in botany: A genus of the mnnogynia order, belonging to the tetrandria clats of plants. The corolla is monopetalous, and falver-fhaped ; there are two feeds emarginated fuperior; the calyx is truncated.

SCeVOLA (C. Mucius), a young Roman of i]luftrious birth, is partienlarly celebrated in the Roman hifory for a brave but unfueceisful attempt npon the life of Forfena king of Heiruria, about the ycar before Chrift 504. See the article Rome, \(n^{\circ} 71\).

Scevola, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants. The corolla is monopetalons; the tube flit longitudinally; the border quinquefid and lateral. The fruit is a plum inferior and monofpermous; the nuclens hilocular.

SCAFFOLD, among builders, an affemblage of planks and boards, futlained by treffels and pieces of wood fixed in the wall; whereon mafons, bricklayers. \&cc. Atand to work, in building high walls, and plafterers in platering cielings, \&c.

Scaffold, alfo denotes a timber work raifed in the manner of an amphitheatre, for the rnore commodious viewing any fhow or ceremony: it is alfo ufed for a little Itage raifed in fome public place, whereon to behead criminals.

SCALA novs (anciently Neapnlis), called by the Turks Koufhadufe, is fituated in a bay, on the flope of a hill, the houfes rifing one above another, intermixed with minarees and tall fender cypreifes. "A Alrcer, through which we rode (fays Dr Chinuler \(\dagger\) ), was hung nor. with goat- fkins expofed to dry, died of a molt lively red. At one of the fountains is an ancient colfin ufed as a

SCALD crean, fometimes alfo called Ciouted cream: a curnus method of preparing cream for butter, almoft peculiar to Devonfhire. Dr Hales, in Philofophical Tranfactions, volume 49, page 342,1755 , part ift, gives fome account of the method of preparing this delicate and luxurious article: other writers alfo fpeak of it. With an elucidation or two, we thall nearly quote Mr Feltham's acenunt from the Genteman's Magazine, volume 61 . part 2. It is there obferved, that the purpofe of making feald-cream is far fuperior butter than can be precured from the ufual raw cream, being preferable for flavour and keeping; in which thofe accultomed are fo partial, as feldom to eat any other. As leaden cifterns would not antwer for fcalding cream, the dairies moflly adopt brafs pans, which hold from three to five gallons for the milk; and that which is put into thofe pans one morning, fands till the next, when, without difturbing it, it is fet over (on a trivet) a teady brik wood fire, devoid of imoke, where it is to remain from feven to fifteen minutes, according to the fize of the pan, or the quantity in it : the precife time of removing it from the fire muft be particularly attended to, and is, when the furface begins tc wrinkle or to gather in a little, fhowing figns of being near the agitation of boiling, which it muft by no means do ; it is then inflantly to be taken off, and placed in the dairy until the next morning, when the fine cream is thrown \(u p\), and may be taken for the table, or for butter, into which it is now foon converted by firring it with the hand. Some know when to remove it from the fire by founding the pan with the finger, it being then lefs fonorous; but this is only acquired by experience. Dr Hales obferves, that this method of preparing milk will take off the ill tafte it fometimes acquires from the cows feeding on turnips, cabbage, sec.
SCALDS, in the hiftory of literature, a name given by the ancient inhabitants of the northern countries to their poets; in whofe writings their hiftory is recorded.

SCALE, a mathematical inftument confifting of feveral lines drawn on wood, brafs, filver, \&ic. and varioufly divided, according to the purpofes it is intended to ferve; whence it acquires various denominations, as the plain foale, dianonal fcale, ploting fcale, \&ic. See Geometry.

Scale, in mufic, fometimes denominoted a gamut, a diagram, a feries, an order, a diapafon. It congilts of the regular gradations of found, by which a compofer or performer, whether in rifing or defiending, may pafs from any given tune to another. Thefe gradations are fiven. When this order is repeated, the firft note of the feeond is confentancous with the loweft mote of the firlf ; the fecond of the former with the fecond of the latter; and fo through the whole oftave. The fecond order, therefore, is juftly efteemed only a repetition of the firft. For this reafon the feale, among the moderns, is fometimes limited to an octave; at other times extended to the compatis of any particular voice or inftument. It likewite frequently includes all the practical gradations of mulical found, or the whole number of oetaves. employed in cempufition or execution, arranged in their natural order.

SCAlene, or Scalenous Triangle, fcalenum, in geometry, a triangle whofe fides and angles are unequal. Sce Geometry. cifern. The port was filled wihh mall cr.ff. Before it is an old fortrefs on a ruck or inet frequented by gulls and fea-mews. By the water-fide is a large and good khan, at which we paffed a night on our return. This place bel inged once to the Ephefinans, who exchanged it with the Samians tor a "wn in Cari:."

SCALADO, or Scallade, in the art of war, a furious affault made on the wall or rampart of a city, or other fortified place, by means of ladders, without carrying on works in form, to fecure the men.

SCALENUS, in anatomy. See there, Talle of the Mufiles.
SCALIGER (Julius Cæfar), a learned critic, poet, phyfian, and philolopher; was born at the caftle of Ripa, in the territories of Verona, in 1484 : and is faid to have been defcended from the ancient princes of Verona, though this is not mentioned in the letters of naturalization he obtained in France in 1528. He learned the firlt rudiments of the Latin tongue ia his own country; and in his 12 th year was prefented to the Emperor Maximilian, who made him one of his payes. He ferved that emperor iy yearc, and gave fignal proofs of his valour and conduct in feveral expeditions. He was prefent at the battle of Ravenna in Aptil 1512 , in which he had the misfortune to lofe his father Benedift Scaliger, and his brother Titus; on which his mother died with grief: when being reduced to neceffitous circumflances, he entered into the order of the Francifcans and applied himfelf to fudy at Bologna; but foon after changing his mind with refpect to his becoming a monk, he took arms again, and ferved in Piedmont. At which time a phylician pestuaded him to Itudy phyfic, which he did at his leifure-hours, and alfo learned Greek; and at laft the gout determined him, at 40 years of age, to abandon a military life. Fie bon after fettled at Agen, where he married, and began to apply himfelf ferioufly to his ftudies. He learned firft the French tongue, which he fpoke perfectly in three months; and then made himfelf malter of the Gafcon, Italian, Spanifh, German, Hungarian, and Sclavonian : but the chief object of his fudies was politeliterature. Meanwhile, he fupported his family by the practice of phyfic. He did not publifh any of his works till he was 47 years of age; when he foon gained a great name in the republic of letters. He had a graceful perfon, and fo ftrong a memory, even in his old age, that he dictated to his fon 200 verfes which he had cumpofed the day before, and retained without writing them down. He was fo charitable, that his houfe was as it were an hofpital for the poor and lick; and he had fuch an averfion to lying, that be would have no correfpondence with thofe who were giren to that vice; but, on the other hand, he had much vanity, and a fatirical fpirit, which created him many enemies. He died of a retention of urine in 1558. He wrote in Latin, 1. A Treatife on the Art of Poetry. 2. Exercitations againft Carden : which works are much efteemed. 3. Commentaries on Ariftotle's Hiftory of Animals, and on Theophraftus on Plants. 4. Some Treatifes on Phyfic, 5. Letters, Orations, Poems, and other works.

Scaliger (Jofeph Juftus), one of the moft learned critics and writers of his time; he was the fon of the furmer, and was born at Agen in France in 1540. He tudied in the college of Bourdeaux ; after which his father took him under his own care, and employed him in tranfcribing his poems; by which means he obtained fuch a tafte for poetry, that before he was 17 years old he wrote a tragedy upun the fubject of Oedipus, in which he introduced all the poctical ormaments of ftyle and fentiment. His father dying in \(155^{8}\), he went to Paris the year following, with a defign to - ipiy himfelf to the Greek tongue. For this purpofe he for two months attended the lectures of Purnebus; u.t tindiug that in the wial courfe he thould be a long
time in gaining his point, he thut himfelf up in his clo. fet, and by conftant application for two year's gained a perfect knowledge of that language. After which he applied to the Hebrew, which he learned by himfelf with great facility. He made no lefs progrefs in the fciences; and his writings procured him the reputation of one of the greatell men of that or any other age. He embraced the reformed religion at 22 years of age. In 1563, he attached himfelt to Lewis Cafticgnier de la Roch Pezay, whom he attended in feveral journeys; and in 1593, was invited to accept of the place of honurary profellor of the univerfity of Leyden, which he complied with. He died of a dropfy in that city in 1609. He was a man of great temperance ; was never married; and was fo clofe a ttudent, that he often fpent while days in his ftudy without eating; and though his circumftances were always very narrow, he conflantly refuied the prefents that were offered him. He publithed many works; the principal of which are, 1. Notes on Seneca's Tragedies, on Varro, Aufonius, Pompeius Fef. tus, \&c. 2. His Latin Poems. 3. A 'Treatife de Emerdatione Temporum. 4. Eufebius's Chronicle with Notes. 5. Canones Ifarogici; and many other works. The collections intitled Scaligeriana, were collected from his converfations by one of his friends; and being ranged into alphabetical order, were publifhed by Ifaac Volfius.

SCALILOP, in ichthyology. See Pecten.
In the Highlands of Scotland, the great fcallop frell is made ufe of for the fkimming of milk. In old times, it had a more honourable place ; being admitted into the halls of heroes, and was the cup of their feltivits when the tribe affembled in the hall of their chieftain.

SCALPEL, in furgery, a kind of knife ufed in ana. tomical diflections and operations in furgery.

SCALPER, or Scalping-Iron, a furgeon's inftru. ment ufed for fcraping foul carious bones.

SCALPING, in military hiftory, a barbarous curtom, in practice among the Indian warriors, of taking off the tops of the fcalps of the enemies' \(\mathrm{kkull}_{\mathrm{k}}\) with their hair on. They preferve them as trophies of their visto. ries, and are rewarded by their chiefs according to the number of falps they bring in.

SCALPRA Dentalia, inftuments ufed by the furgeons to take off thofe black, livid, or yellow crults which infelt the teeth, and not only loule and deftroy them, but taint the breath.

SCAMMONY, a concreted vegetạble juice of a fpccies of convolvulus, partly of the relin, and partly of the gum kind. See Convolvulus.

The bett fcammony comes from Aleppo, in light fpongy maffes, eafily friable, of a fhining afh-colour verging to black; when powdered, of a light grey or whitifh-culour: an inferiur fort is broughe from Smyrna, in more compact ponderous pieces, of a darker colour, and full of fand and other impurities. 'This juice is chiefly of the refinous kind; rectified fpirit diffolves five ounces out of tix, the remainder is a mucilaginous fubfance mixed with drufs ; proof-fpirit iotally diffolves it, the impurities only being left. It has a faint unpleafant fmell, and a bitterilh, fumewhat acrimonious, talte.

Scammony is an efficacions and ftrong purgative. Some have condemased it as unfafe, and had fundry ill qualities to its charge ; the principal of which is, that

Standalum its operation is uncertain, a full dofe preving fometimes ineffectual, whith at celpers a much faller one
sanu ina- cecafions dangerous hypercatharfes. 'This diflerence, however, is owing entirely to the different circumllances of the patient, and not tw any ill quahty or irregularity of nperation of the mealicisie: where the inteltines are lined with an excellive load of mucus, il.e fammony palles through without exerting ittelf apon them ; where the natural mucus is deficient, if fall dose wi this or any other refinnus cathartic inntates and inflames. Many have endeavoured to abate the force of this drug, and correet its imatinary vinulence, by expoting it to the fume of fulphur, diffulving it in acid juices, and the like; but this could do no more than deftruy as it were a part of the medicine, without maling any alteration in the reft. Scammony in fubitance, judicioully managed, ftands no: in need if any corrector: if triturated with fugar or with almonds, it becomes fufficiently fafe and mild in operation. It may likewife be conveniently diffolved by trituration in a Ifrng decoction of liquorice, and then poured off from the lieces: the college of Wertemberg aflures us, that by this treatmeat it becomes mildly purgative, without being attended with gripes, or other inconveniences; and that it likewife proves inoffenfive to the palate. The common dofe of fammony is from three to twelve grains.
SCANDALUM Magnatum, in law, is a defamatory fpeech or writing to the injury of a perfon of dignity; for which a writ that bears the fame name is granted for the recovery of damages.
SCANDERBEG, the furname of George Caftriot king of Albania, a province of Turkey in Lurope, dependent on the Ottoman empire. He was delivered up with his three elder brothers as hoftages, by their father, to Amurath II. fultan of the Turks, who poiforied his brothers, but fpared him on account of his youth, being likewile pleafed with his juvenile wit and amiable perion. In a flort time he became one of the moft renorned generals of the age; and revolting from Amurath, he juined Hunniade Corvin, a môt for midable enemy to the Ottoman power. He defeated the fultan's army, took Amurath's fecretary prifoner, oblized him to fign and feal an order to the governor of Croia, the capital of Albania, to deliver up the citadel and city to the bearer of that order, in the name of the fultan. With this forged order lee repaired to Crcial ; and thus recovered the thronc of his anceftors, and maintained the independency of his country againlt the numerons armies of Amurath and his fincceffor Mahomned IT. who was obliged to make peace with this hero in 146 r . He then went to the alliftance of Ferdinand of Airagon, at the requeft of lope Pius II. and by his aliftance Yerdinand gained a complete victory over his enemy the count of Anjou. Sianderbeg died in 1467 .

\section*{sChinderoon. Sce Alexininetta.}

SCANDINAVIA, a general name for the countries of Norway, Sweden, and Denmark, anciently under the domition of one prince. The inhabitants of thefe countries, in former times, were exceffively nddieted to war. From their earlien jears they applied themfelves to the military art, and accuflomed thembelves to cold, fatigue, and hunger. Even the very fports of youth and childhood were dangerous.

They confifted in taking frightful keaps, climuine up S.and:asthe fteepert rocks, firling nated wi.h flumfive weapros, weftling with the utment inty ; \(f\), that it w...s ulual to fice tiem grown up to ber rinitt mont, and torrible in the combat, at the age of 15 . At thit eart. are the young men became their awn maters; whicit they did by rec-iwing a frord, a buckler, and a lance. 'I"his ceremony was performed at fome public mecti \({ }^{\text {g }}\). One of the principal men of the allembly ramed abo youth in public: atter which he was oul ged to provida for his own fublillence, and was cither now to liw. by lunting, or by joining in fome incurlion agaivit the enemy. Grent care was iaken to prevent the young men from too early comedions with the female rex; ard indeed they could have no bope to gain the affection of the fair, but in proportion to the courage and addrefs they had thown in their militay exerciles. Accurdingly, in an ancient tong, we find Bartholin, king of Norway, extremely furprized that his miftrefs fhould prove unkind, as lie could perform eight different exercies. The children were generally borm in camps; and being inured from their infancy to behold nothing but arms, effulion of blood, and flaughter, they imbibed the cruel difpolition of their fathers, and when they broke forth upon nther nations, behaved rather like furies than like human creatures.

The laws of this people, in fome meafure refembled thofe of the ancient Lacedemonians. They knew no virtue but b:avery, and no vice but cowardice. The greatelt penalties were infinged on fuch as fled from battle. The laws of the ancient Danes declared fualh perfons infamous, and excluded them from focicty. Anong the Germans, cowards were fometimes fuffocated in mud ; after which they were covered over with hurdles, to fhow, fays Tacitus, that though the punifliment of crimes fhould be public, there are cortain degrees of cowardice and infamy which ought to be buried in oblivion. Frotho king of Denmark ena 气ed, by law, that whoerer folicited an eminent poft ought upon all cecafions to attack one enemy, to face two, to retire only one fep back from three, and never to make an actual etreat till affaulted by four. The rules of junice themfe!ves were adapted and warped to thefe prejudices. War was looked upon as a real aft of juftice, and force was thought to be an incontelible title over the weak, and a vifible mark that God had intended them to be fubject to the firong. They had no doubt but that the intentions of the Deity had been to eftablifh the fame dependence amonr men that takes place among inferior creatures ; and, fetting out from this principle of the natural inequslity anong men, they fiad from thence inferred that the weak had no right to what they could not defend. This maxim wa; adopted with fuh rigour, that the name of divine judgcment was given not only to the judicatory combat, but to conflicts and battles of all forts; vifory being, in their opinion, the only certain mark by which providence enables us to diftinguiliz thofe whom it has appointel to command nthers. - Laftly, their religion, by annexing eternal happinefs to the military virtues, gave the utmolt pollible degree of vigoni to that propentity which thefe penple had for war, and to their contempt of death, of which we fhall now give fome intances. We are informed that Hamold, furnamed Blabioml, or Blue-booth, a king of Denmark, who lived in the be: Vol. XVI.
scandina- gianing of the ninth century, had founded on the \(\underbrace{\text { via. }}\) coalts of Pomerania a city named Yulin or Fomforg. To this place he fent a culony of young Danes, befowing the government on a celebrated warrior called Pa'natoko. In this colnny it was forbidden to mention the word fear, even in the moft imminent dangers. No citizen of Jomforg was to yield to any number of enemies however great. The fight of inevitable death was not to be taken as an excufe for thowing the fmalleft apprehenfion. And this legiflator really appears to have eradicated from the minds of moft of the youths bred up under him, all traces of that fentiment fo natural and fo univerfal, which makes men think on their deftruction with horror. Nothing can fhow this better than a fingle fact in their hiffory, which deferves to have place here for its fingularity. Some of them hasving made an irruption into the territories of a powerful Norwegian lord, named Haquin, were overcome in fpite of the obftinacy of their refiftance; and the molt diftinguifhed among them being made prifoners, were, according to the cuftom of thofe times, condemned to death. The news of this, far from aflisting them, was on the contrary received with joy. The firt who was led to punifhment was content to fay, without changing countenance, and without expreffing the lealt fign of fear, "Why fhould not the fame happen to me as did to my father? He died, and fo muft I." A warrior, named Thorchill, who was to cut off the head of the fecond, having afked lim what he felt at the fight of death, he anfivered, "that he remembered too well the laws of Jomflourg to citter any words that denoted fear." The third, in reply to the fame queftion, faid, "he rejoiced to die with glory; and that he preferred fuch a death to an infamous life like that of Thorchill's." The fourth made an anfiver much longer and more extraordinary. "I fuffer with a good heart; and the prefent hour is to me very agreeable. I only beg of you (added he, addrefling himfelf to Thorchill) to be very quick in cutting off my head; for it is a queflion often debated by ins at Jomburg, whether one rerains any fenfe after being beheaded. I will therefore grafp this knife in my hand; if, after my head is cut eff, I frike it towards you, it will flow I have not loft all fenfe; if I let it drop, it will be a proof of the contrary. Make hafte, therefore, and decide the difpute." Thorchill, adds the hiftorian, cut off his head in a molt expeditions manner; but the knife, as might be expected, drept from his hand. The fifth fhowed the fame tranquility, and died rallying and jeening his enemies. The iixth begged of Thorchill, that he might not be led to punifhment like a fheep: "Strike the blow in my face (faid he), I will fit fill without fhrinking; and take notice whether I once wink my eyes, or betray one lign of fear in my countenance: for we in habitaris of Jomburg are ufed to exercife ourfelves in trials of this \(f, n t\), in as to meet the froke of de, th with ut once moving." He kept his promife before all the fpedators, and received the blew without betraying the loalt lign of fear, or fo much as winking with his eycs. Thic feventh, fays the hiforian, was a very beautiful young man, in the fower of his age. His long lair, as fine as filk, foated in curls and ringlets on his fhuulders. Thorchill aked him, what he thought of death? "I receive it willingly (faid he), fince I have fultilled the greatef duty of life, and have feen
all thofe put to death whom I would not furvive. I only beg of you one favour, not to let my hair be touched by a flave, or fained with my blood."

Ncither was this intrepidity peculiar to the inhabitants of Jomburg; it was the general character of all the Scandinavians, of which we fall only give this further inftance. A wartior, having been thrown upon his back in wrefling with his enemy, and the latter finding himfelf without his arms, the vanquifhed perfon promiled to wait, without changing his pofture, till his autagonift fetched a fword to kill him; and he faithfully kept his word.-To die with his arms in his hand was the ardent wifh of every free man; and the pleafing idea which they had of this kind of deatht lod them to dread fuch as proceeded from old age and difcafe. The hitory of ancient Scandinavia is full of intances of this way of thinking. The warriors who found themfelves lingering in difeafe, often availed themelves of their few remaining moments to fhake off life, by a way that they fuppofed to be more glorious. Some of them would be carried intn a ficld of battle, that they migit die in the engagement. Others flew themfelves: many procured this melancholy fervice to be performed by their friends, who confidered it as a molt facred duty. "There is, on a mountain of Iceland, (fays the author of an old Iceland romance), a rock fo high, that no animal can fall from the top and live. Here men betake themfelves when they are afflited and unhappy. From this place all our anceftors, even without waiting for ficknefs, have departed into Eden. It is ufelefs, therefore, to give ourfelves up to groans and complaints, or to put our relations to needlefs expences, fince we can eafily follow the example of our fathers, who have all gone by the way of this rock."-When all thefe methods failed, and at laft when Chrifianity had banifhed fuch barbarous practices, the difconfolate heroes comfoled themfelves by putting on complete armour as foon as they found their end approaching.

SCANDIX, Shepherds Needle, or Venus Comb, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 45 th order, Umbellata. The corolla is radiating; the fruit fubulated; the petals emarginated; the florets of the dife frequently male. The mof remarkable fpecies is the odorata, with angular furrowed feeds. It is a native of Germany ; and has a very thick perennial root, compofed of many fibres, of a fiweet aromatic talte like anifeed, from which come forth many large leaves that branch out fomewhat like thofe of fern, from whence it is named fucet-fern. The falks grow four or five feet high, are fiftulous and haity; the flowers are difpofed in an umbel at the top of the flalk, are of a white colour, and have a fwect aromatic feent.-This fpecies is eafily progagated by feeds, which, if permitted to featter, will fupply an abundance of young plants, that may be put into any part of the garden, and require no care.

SCANNING, in poetry, the meafuring of werfe by feet, in order to fee whether or not the quantities be duly obferved. The term is chichly ufed in Greek and Latin verfes. Thus an hexameter verie is fcanned by refolving it into fix feet; a pertameter, by refolving. it into five fect, \&c.

SCANTO,

\section*{Swin-}
burne's
'lravels in the two Sicilies.

SCANTO, or Spavesito, a fudden imprefion of horror upon the mind and body. It is cxtremely dreaded by the inhabitants of Sicily; and the wild ideas of the vulgar part of the inhabitants refperting it are almolt incredible, and their dread of a fiduen flock is no lefs furprizing. 'There is farce al fymptum, diforder, o: accident, they do not think may beral the hum an frame in confequence of the icanto. 'They are perluaded that a man who has been frightened oniy by a dog, a riper, fcorpion, or any other creature, which he has an antipathy 10 , will foon be leized with the fame pains he would really fecl, had he been torn with their teeth or wounded with their venomous fing ; and that nothing can remove theie nervous imaginary pamys but a frong dofe of dilena, a fpecies of cantha. rides found in sicily.

SCAPEGoat, in the Jewifh antiquitics, the goat which was fee at liberty on the dey of folemn cepiation. For the ceremonies on this oncation, fee Levit. xri. 5, 6, 8:c.

Sume fay, that a piece of fearict cloth, in form of a tongne, was tied on the forehead of the feape-goat. Hoff. Lex. Univ. in voc. Lingua.

Miny have been the dilputes among the interpreters concerning the meaning of the word frabe-goat; or rather of \(a z a z e l\), for which foupegoat is put in our verfion of the Bible.

Spencer is of opinion, that azazel is a proper name, fignifying the devil or evil dæmon. Sec his reafons in his book De leg. H.br. ritual. Differt. viii. Among other things, he oblerves, that the ancient Jews uied to firbtitute the name Samäll for \(A \approx a z e l\); and many of them lave ventured to affirm, that at the fealt of expiztion they were obliged to offer a gift to Samael to obtain his favour. Thus alfo the goat, fent into the wildernefs to Azazel, was undertood to be a gift or oblation. Some Chrittians have been of the fame opinion. But Spencer thinks that the genuine reafons of the ceremony were, I. That the goat, loaded with the fins of the people, and fent to Azazel, might be a fymbolical reprefentation of the miferable condition of fimers. 2. God fent the groat thus loaded to the evil dxmons, to flow that they were impure, thereby to deter the people from any converfation or familiarity with them. 3. That the goat fent to Azazel, fuficiently expiating all evils, the Ifraelites might the more willingly abtain from the expistory facritices of the Gentiles.

SCAPULA, in anatomy, the fhoulder, or faoulderLane.

Scapula (John), the reputed author of a Greek Iexicon, Aludied at Lanfannc. His name is recorded in the annals of literdture, neither on account of his talents nor learniny, nor virtuous induftry, but for a grofs as of difingenvity and fraud which he committed againgt an eminent literary character of the 16 th century. Being employed by Henry Stephens as a corrector to his prefs white he was publiliting his Thefaurus lingue Grace, Scapula extracted thofe words and explications which he reckoned moft ufeful, comprifed them in one volume, and publifhed them as an original work, with his own name.

The compilation and printing of the Thefaurus had colt Stephens immenfe labour and expence; but it was to much adinired by thofe learned men to whom he had
fhown it, and feemad to be of fuch effencinl imp rtatice S.apulat) the acquilition of the Greak lanyu:ge, that he rea- sarahaufonably hoped his labour would be crowned with ho. nour, and the money he had expended would be repaid by a rapid and extenfive fale. But tefore his work canae abrond, Scapula's abridgementapp:ared; which, from its fize and frice, was quickly puchafad, while the Thefurus iffelf liy negleeted in the author's hands. The comequance was a bankruptce on the part if S:cphens, white he who had occafioned it was erjoying the frnits of his treachery. Scapula's Lexicon was fitt printed in 1500 , in +10 . It was afterwards enlarged, and publithed in folio. It has gone through feveral editions, white the valuable work of Stephens bas neyer been reprined. Its fuccefs is, however, not owing to its fuperior merit, but to its price and more commodious fize. Stephens charges the author with omitting a great namy important articles. He accufes him of mifunderlatading and perverting his meaning ; and of tracing out ablurd and trining etymologies, which he himfelt had been careful to avoid. He compofed the following epigram on Scapula:

> Quilom a mirsurar m: capulo tenis abdidit enfem Ag:r eram a Scapulis, fun:s et but redeo.

Doct re Bußy, fo much celebrated for his knowledge of the Greek language, and his fuccefs in teachirg it, would never parmit his fcholars at Weftminter fchool to make ufe of Scapula.

SCAPULAR, in anatomy, the name of two pair of arteries, and as many veins.

Scapular, or Scapulary, a part of the habit of feveral religious orders in the church of Rome, worn over the gown as a badge of peculiar veneration for the \(131 e f f e d\) Virgin. It conffits of two narrow flips or breadihs of cloth covering the back and the breah, and hanging down to the teet. The devotees of the fcapulary celchrate its feftival on the 10th of July.

SCARABIEUS, the Beetle, in zoology, a genus of iniects of the coleoptera order: the antennx of the beetles are of a clavated figure, and fillile longitudinally; and their legs are frequently dentated. There are 87 fpecies; all, however, concurring in one common formation of having cales to their wings, which are the more necellary to thofe infeats, as they ofrea live under the furface of the earth, in holes which they dig out by their own induftry. The cafes prevent the various injuries their real wings might fufain by rubbing or crufhing againtt the fides of their abode. Thefe, though they do not allift fight, jet keep the intermal wings clean and even, and produce a loud buzzing noile when the animal rifes in the air.

If we examine the formation of all animals of the bectle kind, we fhall find, as in thell filh, that their bones are placed externally, and their mufcles within. There muicles are formed very much like thofe of quadrupeds; and are formed with fuch furpriting, Hrength, that, bulk for bulk, they are a thaufand times Atonger than thofe of a man. The Arength of thefe mufcles is of ufe in digging the animal's fubtersanenus abode, whither it moolt frequently returns, even after it becomes a winged infer capable of Alying.

Befides the difference which refults from the fhape and colour of thefe animals, the fize alfo mıkes a confiderable one; fome bectles being not larger than the
3.arabatus head of a pin; while others, fuch as the elephant

\section*{- \(\square\)} beetle, are as big as one's fift. But the greateft difference among them is, that fome are produced in a month, and in a fingle featon go through all the Atages of their exiftence; while others take near four years to their production, and live as winged infects a year more.
'I'he may-bug, dorr-bectle, or cock-chaffer, has, like all the rett, a pair of cafes to its wings, which are of a reddifh brown colour, fprinkled with a whitilh duft, which eafily comes off. In fome years their necks are feen covered with a red plate, and in others with a black; thefe, however, are diftinet forts, and their difference is by no means accidental. The fore-legs are very floort, and the better calculated for burrowing in the ground, where this infect makes its retreat. It is well known, for its evening buzz, to children; but ftill more formidably introduced to the acquaintance of the hufoandman and gardener, for in fome feafons it has been found to fwarm in fuch numbers as to eat up every vegetable production.

The two fexes in the may-bug are eafily diftin. guifhed from each other, by the fuperior length of the tufts, at the end of the horns, in the male. They begin to copulate in fummer ; and at that feafon they are feen joined together for a confiderable time. They fly about in this ftate, the one hanging pendant from the tail of the other. It has been fuppofed, that, like fnails, they are hermaphrodites, as there feems to be a mutual infertion.

The female being impregnated, quickly falls to boring a hole into the ground, wherein to depofit her burden. This is generally about half a foot deep; and in it the places her eggs, which are of an oblong thape, with great regularity, one by the other. They are of a bright yellow colour, and no way wrapped up in a common covering, as fome have imagined. When the female is lightened of her burden, fhe again aicends from her hole, to live, as before, upon leaves and vegetables, to buzz in the fummer evening, and to lie hid among the branches of trees in the heat of the day.

In about three months after thefe eggs have been thus depofited in the earth, the contained infect begins to break its fhell, and a fmall grub or maggot crawls forth, and feeds upon the roots of whatever vegetable it happens to be neareft. All fubftances, cf this kind, Seem equally grateful; yet it is probable the mother infect has a choice among what kind of vegetables flie thall depofit her young. In this manner thefe veracious creatures continue in the worm fate for more than three jears, devouring the roots of cvery plant they approach, and making their way under ground in queft of food with great difpatch and facility. At length they grow to above the fize of a walnut, being a great thick white maggot with a red heat, which is feen molt frequently in new turned earth, and which is fo eagerly fonght after by birds of every fipccies. When largef, they are found an inch and a hulf long, of a whitifh yellow colour; with a body confifting of twelve fegments or joints, on each fide of which there are nine breathing holes, and thrce red feet. The head is larger in proportion to the body, of a reddifh colour, with a pincer before, and a femicircular lip, with which it cuts the roots of phants, and fucks out their moilturc. As this infect
lives entirely under ground, it has no occafion for Scarabrus. eyes, and accordingly it is found to have none; but is furnifhed with two feelers, which, like the crutch of a blind man, ferve to direat its motions. Such is the form of this animal, that lives for years in the worm fate under ground, fill voracious, and every year clanging its fkin.

It is not till the end of the fourth year that this extrandinary infect prepares to emerge from its fubterraneous abode, and even this is not effected but by a tedions preparation. About the latter end of autumn, the grub begins to perceive the approaches of its transformation: it then buries itfelf deeper and deeper in the earth, fometimes fix. feet beneath the furface; and there forms itfclf a capacious apartment, the walls of which it renders very fmooth and fhining by the exertions of its body. Its abode being thus formed, it begins foon after to fhorten itfelf, to fwell, and to burft its laf fkin in order to affume the form of a chryfalis. This, in the beginning, appears of a yellowill colour, which beightens by degrees, till at laft it is feen nearly red. Its exterior form plainly difcovers all the vefliges of the future winged infect, all the fore parts being diftinctly feen; while, behind, the animal feems as if wrapped in fwaddling clothes.

The young may-bug continues in this flate for about three months longer; and it is not till the beginning of January that the aurelia divefts thelf of all its impediments, and becomes a winged infect completely formed. Yet fill the animal is far from attaining its natural Arength, health, and appetite. It undergoes a kind of infant imbecility; and unlike mont other infects, that the inftant they become flies are arrived at their tate of full perfection, the may-bug continues feeble and fickly. Its colour is much brighter than in the perfect animal; all its parts are foft; and its voracious nature feems for a while to have entirely forfaken it. As the animal is very often found in this Itate, it is fuppofed, by thofe unacquainted with its real hiftory, that the old ones, of the former feafon, have buried themfelves for the winter, in order to revifit the fun the enfuing fummer. But the fact is, the old one never furvives the fafon; but dies, like all the other winged tribe of infeets, from the feverity of cold in winter.

About the latter end of May, thele infects, after having lived for four years under ground, burf from the earth when the firt mild evening invites them abroad. They are at that time feen rifing from their long imprifonment, from living only upon roots, and imbibing only the mointure of the earth, to vifit the miluncfs of the fummer air, to choofe the fweetef vegetables for their banquet, and to drink the dew of the evening. Wherever an attentive obfenver then walks abroad, be will fee them burfing up before him in his pathway, like ghofs on a theatre. He will fee every part of the earth, that had its furface beaten into hardnefs, perforated by their cgreffion. When the feafon is favourable for them, they are feen by myriads buzzing along, hitting againt every object that intercepts their flight. The mid-day fun, howevcr, feems tro powerful for their conftitutions: they then lurk under the leaves and branches of fome flatly tree; but the willow feems pirticularly their noth favourite food; there they lurk in clufters, and fellom
\(\underbrace{\text { Scarabxus. quit the tree till they have devoured all its verdure. }}\) pagation, they are feen in an evening as thick as Alakes of fnow, and hitting againft every object with a fort of capricious blindncfs. Their duration, however, is but fhort, as they never furvive the featon. They begin to join fhortly atter they have been let loote from their prifon; and when the femate is inpregnated, the cautioully bores a hole in the ground, with an inArument fitted for that purpofe with which the is furnifhed at the tail; and there depofits her eggs, generally to the number of threcicore. If the featon and the foil be adapted to tixeir propagation, thefe foon multiply as already deferibed, and go through the various fates of their contemptible exifteace. This infert, however, in its worm itate, though prejudicial to man, makes one of the chief repailts of the teathered tribe, and is generally the firft nourifhment with which they fupply their young. Hogs will root up the land for them, and at fintt eat them greedily; but feldom meddle with them a fecond time. Rooks are particularly fond of thefe worms, and devour them in great numbers. The inhabitants of the county of Norlolk, fome time fince, went into the prastice of deltroying their rookeries; but in proportion as they deftroyed one plague, they were peftered with a gieater; and thefe infects multiplied in fuch an amazing abundance, as to dettroy not only the verdure of the fields, but even the roots of vegetables not yet thot forth. One farm in particular was fo injured by them in the year 1751, that the occupier was not able to pay his sent; and the landlord was not only content to lofe his income for that year, but alfo gave money for the fupport of the farmer and his family. In Ireland they luffered fo much by thefe infests, that they came to a sefolution of fetting fire to a wood, of fome extent, to prevent their milchievous propagation.
Bah Papere, vol. i.
"Nether the fererell frofs in our climate (Cays Mr B6. Rac:), nor even keepir.g ti em in water, will kill them. p. 265. I have kept fome in water near a week; they appeared motiontefs; but on expoling them to the fun and air a few hours, thes recovered, and were as lively as ever. Hence it is cvident they can live without air. On examining them with a mictofeope, I could never difcover any organs for refpiration, or perceive any pulfation. When numerous, they are not deftroyed without great difficulty; the beft method is, to plingh up the lind in thin furrows, and employ children to pick them up in bafkets; and then ferevfalt and quick-lime, and harrow in. About 30 years lince I remember many farmers crops in Norfolk were almof ruined by them in their grub-ftate ; and in the next featon, when they took wing, the trees and hedges in many parithes were fripped bare of their leaves as in winter. At firft the people ufed to brufi them down with poles, and then fucep them up and burn them. One farmer made oath that he gathered 80 buthels; but their number feemed not much leifened, except juft in his own fields."

The fearabrus carnifex, which the Amcricans call the tumble-dung, particularly demands nurattention. It is all over of a dufky black, rounder than thofe animals are generally found to be, and fo Atrong, theugh not much larger than the common black bectle, that if one of them be put under a brafs candleflick, it will caufe it to more backwards and forwards, as if it were by an
invifible hand, to the admiration of thofe who are not
accultomed to the fight : but this frength is given it
for much more ufeful purpofes than the fe of exciting human curiofity; for there is no creature more laburious, cither in feeling fubfiftence, or providing a proper retreat for its young. They are endowed with lagacity to difcover fubfillence by their excellent fmelling, which directs thens in fights to excrenvents jult falien from man or beaft, on which they inttantly drup, and tall unanimoufly to work in forming round balls or pcilets therenf, in the midule of which they lay an egg. Thefe pellets, in September, they convey three feet deep in the earth, where they lie till the approach of ipring, when the egrs are hatched and burtt their nells, and the infcets find their way out of the earth. They afift each other with indefatigable induftry in roll. ing thefe globular pellets to the place where they are to be baried. This they are to perform with the tail foremont, by raifins up their hinder part, and fhoving along the ball with their hindfeet. They are always accompanied with other beetles of a larger fize, and of a more elegant Aructure and colvur. The breaft of this is covered with a fhield of a criniton colour, and fhining like metal; the head is of the like colour, mixed with green; and on the crown of the head flands a fhining black horn, bending backwards. Thefe are cailed the kings of the beetles ; but for what reafon is uncertain, fince they partake of the fame dirty drudgery with the reft.

The elephant batle is the largett of this kind hither:o known; and is found in South America, particularly in Guiana and Surinam, as well as about the river Oronnoko. It is of a black colour ; and the whole body is covered with a very hard thell, full as thick and as ftrong as that of a imall crab. Its length, from the hinder part to the eyes, is almuff four inches; and from the fame part to the end of the probofcis or trunk, four inches and three quarters. The tranfverfe diameter of the body is two inches and a quarter; and the breadth of each elytron, or cafe for the wings, is an inch and three-tenths. The antennx or feclers are quite horny ; for which reafun the probocis or trunk is moveable at its infertion into the head, and feems to fupply the place of feelers; the horns are eight-ienths of an inch long, and terminate in points. The probofis is an it ch and a quarter long, and turns upwards; making a crooked line, terminating in two horns, each of which is near a quarter of an inch long; but they are not perfomed at the end like the probofcis of other infects. Abou: four-tenths of an inch above the head, on that frue next the body, is a prominence or fmall horn; which, if the refl of the trunk were :lway, would caute this part to refumble the horn of a mhinoceros. There is indced a beetle fo called; tut then the horn or trunk has no fork at the end, though the lower horn refmbles this. The feet are all forked at the end, but net like lob\{ters claws. See Plate CCCCSIIV.
SCARBOROUGH, a town of the North Ridirg of lorkthise, feated on a fecp rech, near which are fach craggy clifs that it is alnoft inaccelible on every fide. On the top of this rock is a large green plain, with two wells of frefl water fpringin; out ot the reck. It has of late been greatly frequented on account of its mineral waters called the Scarboruugho-Spa; on which account it is much mended in the number and beauty of the buildingr. The fring was under the cliff, part of which

Scarbnicush, Scardina.
whicly fell down in 1737, and the water was lon ; but in clearin \({ }^{5}\) away the rums in order to rebuild the wharf, it was recovered, to the great joy of the town. The waters of Scarborough are chalybcate and purging. The two wells are both inpregnated with the fame principles, in different proportions; though the purging well is the moft celebrated, and the water of this is ufually called the Siarborough water. When theie waters are poured out of one glais into another, they throw up a number of air-bubbles; and if they are thakey for fome time in a plial clofe fopped, and the phial be fuddenly opened before the commotion ceafes, they difplode an elafic vapour, with an andible noife, which flows that they abound in fixed air. At the forntain they have a brifk, pungent, chalybeate tafte; but the purging water taltes bitterifh, which is not ufually the cale with the chalybeate one. They lore their chalybeate virtues by cxpolure and by keeping; but the purging water the foonelt. They both putrety by keeping; hut in time recover their fweetnefs. Four of five half pints of the purging water drank within an lour, give two or three cafy motions, and raife the fpiaits. The like quantity of the chalybate purges lels, but exhilarates nore, and paltes off chichy by urine. 'Thefe waters have been found beneficial in hectic fevers, weakneftes of the fomach, and indigeftion; in relaxalions of the fyftem; in nervous, hyfteric, and hypochondriacal diforders; in the green ficknefs, furvy, theumatim, and althmatic complaints; in gleets, the thor albus, and other preternatural evacuations; and in habitual coftivenefs. Here are affemblies and balls in the fame minner as at Tunbridge. It is a place of fome trade, has a very guod harbour, and fends two mems. bers to parliament. E. Long. 0. 3.N. Lat. 54 : \({ }^{18}\).

SCARDONA, a fea-port tuwn of Dalmatia, feated on the eaftern banks of the river Cherca, with a bithop's fee. It has been taken and retaken feveral times by the Turks and Venetians; and thefe laft ruined the fortifications and its principal buidmes in 1537; but they have been fince put in a fate of defence.
\({ }^{6}\) No velliges (lays Fortis) now remain vifible of that ancient city, where the ftates of Liburnia held their affembly in the times of the Romans. 1 however tranfrribed thefe two beautiful infcriptions, which were difcovered fome years ago, and are preferved in the loufe of the reverend Canon Mercati. It is to be hoped, that, as the population of Scardona continues increafing, new land, will be broken up, ard confequently more frequent difcoveries made of the precious monuments of antiquity. And it is to be withed, that the few men of letters, who have a thare in the regulation of this reviving city, may beftow fome particular attention on that asticle, fo that the honourable memorials of their ancient and illuftrious country, which once held fo eminent a rank among the Liburnian cities, may not be lolt, nor carried away. It is almoft a fhame, that only fix legible infcriptions actually exilt at Scardona; and that all the others, fince many more certainly mult have been dug up there, are either miferably broken, or lof, or tranfported to Italy, where they lofe the greateft part of theit merit. Romanl coins are very fiequently found abont Scardona, and feveral valuable ones were fhown to me by that hofpitable prelate Monfignor Trevifani, bilhop and father of the rifing fettlement. One of the principal gentlemen of the place was fo kind as to
give me feveral fepulchral lamps, which are marked by the name of Fortis, and by the elegant form of the letters appear to be of the beft times. The repeated devaftations to which Scardona has been expofed, have left it no traces of grandeur. It is now, however, beginning to rife again, and many merchants of Servia and bofnia have fettled there, on account of the convenient fituation for trade with the upper provinces of Turkey. But the city laas no fortifications, notwith. flanding the affertion of P. Farlati to the contrary." E. Long. 17.25. N. Lat. 43. 55.

SCARIFICATION, in furgery, the operation of making feveral incifions in the fkin by means of lancets or other inftuments, particularly the cupping initrument. See Surgery.

SCARLET, a beautiful bright red colour.
In painting in water-colours, minium mixed with a little vermilion produces a good fcarlet: but if a flower in a print is to be painted a fcarlet colour, the lights as well as the fhades fhonld be covered with minium, and the fhaded parts finifhed with carmine, which will produce an admirable farlet.

Scarlet-Fcuer. See Medicine, no 230.
SCARP, in fortification, is the interior talus or flope of the ditch next the place, at the font of the rampart.

Scarp, in heraldry, the fcarf which military commanders wear for ornament. It is borne fomewhat like a battoon finiter, but is broader than it, and is continued out to the edges of the field, whereas the battoon is cut off at each end.

SCARPANTO, an illand of the Archipelago, and one of the Sporades, lying to the fouth-weft of the ifle of Rhodes, and to the north-ealt of that of Candia. It is about 22 miles in length and 8 in breadth; and there are feveral high mountains. It abounds in cattle and game; and there are mines of iron, quarries of marble, with feveral good harbours. The Turks are mafters of it, but the inhabitants are Greeks.

SCARPE, a river of the Netherlands, which has its fource near Aubigny in Artois, where it wafhes Arras and Douay ; after which it runs on the confines of Flanders and Hainault, paffing by St Amand, and a little after falls into the Scheldt.

SCARRON (Paul), a famous burlefque writer, was the fon of a counfellor in parliament, and was born at Paris about the end of the year 1610 , or in the beginning of the fucceeding year. His father marrying a fecond time, he was compelled to affume the ecclefialtical protellion. At the age of 24 he vifited Italy, where he freely indulged in licentions pleafures. After his return to Pasis he perfifted in a life of diflipation till a long and painful difeafe convinced him that his conftitution was almoft worn out. At length when engaged in a party of pleafure at the age of 27 , he loft the ufe of the fe legs which danced fo gracefuly, and of thofe bands zubich could paint and play on the lute with fo much ele. gance. In the year 1638 he was attending the carnival at Mens, of which he was a canon. Having drelled himlelf one day as a favage, his fingular appearance excited the curiofity of the children of the town. They followed him in multitudes, and he was obliged to take fhelter in a marfh. This wet and cold fituation produced at numbnefs which totally deprived him of the nfe of his limbe; but notwithfanding this misfortune he continued gay and cheerfil. He took up his refidence at

\section*{SCA}

\section*{Scarren.} his houfe all the men of wit about the city. The lofs of his health was followed by the lofs of his fortunc. On the death of his father he entered into a procefs with his mother-in-law. He pleaded the caufe in a ludicrous manner, though his whole furtune depended on the decilion. He accordingly lott the caufe. Mademoifelle de Hautefort, compalionating his misfortunes, procured fur him an andience of the queen. The poet requefted to have the title of \(V^{\text {rathatafinan ian to her }}\) majelty. The qucen fmiled, and Scarron confidered the fimile as the commilfien to his new office. He therefore allumed the title of Scarron, ly the grace of Good, unworthy valetudinarian to the queet.

Cardinal Mazarine gave him a penfion of 500 crowns; but that minifter having received difaninfully the dedication of his Typhon, the poet immediately wrote a Mazarinade, and the penfion was withdrawn. He then attached himfelf to the prince of Condé, and celehrated his victorics. He at length formed the extraordinary refolution of marrying, and was accordingly, in 165 r , martied to Mademoifelle d'Aubigné (after wards the famous Madam de Maintenon), who was then only 16 years of age. "At that time (fays Voltaire) it was conlidered as a great acquifition for her to gain for a hufband a man who was disfigured by nature, impotent, and very little enriched by fortune." When Scarron was queltioned about the contraft of marriage, he faid he acknowledged to the bride two large invincible cyes, a very beautiful fhape, two fine hands, and a large portion of wit. The notary demanded what dowry he would give her? Immediately replied Scarron, "The names of the wives of kings die with them, but the name of Scarron's wife fhall live for ever." She reltrained by her modely his indecent buffooneries, and the good company which had formerly reforted to his houfe were not lefs frcquent in their vifits. Scarron now became a nesv man. He became more decent in his manners and converlation: and his gaiety, when tempered with moderation, was fill more agrce:able. But, in the nean time, he lived with fo little economy, that li is income was foon reduced to a fmall annuity and his marquilate of Quinet. By the marquifate of Quiret, he meant the revenuc be derived from lis publications, which were printed by one Quinct. He was accu? in his jocular ftyle. In the dedication to his Don Fraflet d'Armatric, he thus addrelfes the king. "I fhallicndeavour to perfunde your majefty, that you would do yourfeli no injury were you to do me a imall favour; for in that care I fhould become more gay: if 1 hould become more gay, I thould write forightly comedies: and if Iflould write fpiglitly comedies, your majelly would be anofed, and thus your money would not be loft. All this appears in evident, that I thould certainly be convinced of it if I were as great a king as I 2 m now a poor unfortunate man."

Though Scarron wrote comedies, he had neither time nor patience toftudy the rules and models of dramatic poetry. Ariftotle and Florace, Plautus and 'Terence, would have frightened him ; and perhaps he did not know that there was ever fuch a perfon as Arillophatnes. He faws an open path before him, and he followed it. It was the fafhion of the times to pillage the Spanifl writers. Scarron was acquaninted with that
language, and he found it eafier to ufe the materials which wele already prepared, than to rack his brain in inventing a fubject; a reftraint to which a gevius like his could not eafily fulmit. As he borroweal liberally from the Spanifh writers, a dramatic piece did not colt him much labour. His labour confifted not in making his comic chatacters talk humoroufly, bue in keeping up ferious chataders; for the ferious was a foreign language to him. The great fuccefs of his Yodilet MFaitre was a valt allurement to him. The comedians who acted it eagerly requefted more of his productions. They were written without much toil, and they procured hint large fums. They ferved to amule him. If it be necellary to give more reafons for Scarron's seadinefs to engage in thefe works, abundance may be had. He dedicated his books to his liffer's greyhound bitch ; and when fhe failed him, he dedicated them to a certann Moneigneur, whom he praifed bigher, but did not much elleem. When the office of hiforiographer became vacant, he folicited for it withont fucceis. At length Fouquet gave him a pention of roco livies. Chrittina queen of Sweden having come to Paris, was anxious to fee Scarron. "I permit you (faid fhe to Scarron) to fall in love with me. The queen of France has made you her valetudinarian, and I create you my Roland." Scarron did not long enjoy that title: he was feized with fo riolent a hiccough, that every perfor thought he would have expired. " If I recover the faid), I will make a fine fatire on the ficcough." His gaiety did not forfake him to the lan. Within a few miuntes of his death, when his domeftics were fhedding tears about him, "My gond friends (faid he), I thall never make you weep fo much for me as 1 have made you laugh." Juft before expiring, he faid, "I could never believe before that it is fo cafy to laugh at death." He died on the I 4 th of Oqober 1660 , in the 5 If year of his a aुe.

His works have been collected and publifhed by Bru. zen de la Martiniere, \(\mathrm{i}_{1} 10\) vols \(12 \mathrm{mo}, 173 i\). There are, 1. The Eneid traveltied, in 8 books. It was afterwards continued by Moreau de Brafey. 2. Typhon, or the Gigantomach:a. 3. Many comedies; as, Jodelet, or the Mafter Valet ; Jodelet cuffed; Don Japhet d'Arnuenic ; The Ridiculous Heir ; Every Man his own Guardian ; The Foolifh Murquis ; Ti.e Scl:olar of Salamanca; The Falie Appearance; The Pince Corfaire, a tragi-comedj. Befides thete, he wrote orher pieces in verfe. 4. His Comic Romance in profe, which is the only one of bis w. ths that deferves altertion. It is written with much purity and gatiety, and has contributed not a litile to the improvenient of the French lasgruage. Scarron had great pleafure in reading his works to his friends as he compoed them : he called it trying his works. Segrais anu another of his friends conimity to him one day," "Take a chair (fays Scarron to them) and fit down, that I mas examine my Comic Romance." When he obferved the company langh, "Viry well (faid he), my book will be well reccived lince is makes perfons of fuch delicate tarte laugh." Nor was he deceived. His Rumance had a prodigious ron. It was the only one of his works that Boileau could fubmit to read. 5. Spanilh novels tranlated into French. 6. A volume of Leteers. 7. Puems; confitheng of Songs, Eppitles, Stanzas, Odes, and Epigrams. The whole collection abounds with fprightincís and gavetg: BCarron
fullies are ratlier thofe of a bufoon than the effufions of ingenuity and tade. He is continually f.lling into the n.can and the obfene. If we thould make any excepriot in livour of fome of his comedies, of fome paltiges in lis Eneid trdveflied, and his Comic Romance, we mutt acknowledge that all the reft of his works are unly fit to be read by footmen and buff ons. It has been faid th th he wis the moft eminent man in his age for burlefque. This might make ham an agreeable compaainn to thofe who chofe to laugh away their time ; but as he has left aothing that can influet polterity, he has but litile titic to polthumous fame.

SCENE, in its primaty fenfe, denoted a theatre, or the place where dramatic pieces and other public thows were exhibited; for it docs not appear that the ancient peets were at all acquainted with the modern way of changing the feenes in the different parts of the play, in order to vaile the idea of the perions repielented by the actors being in different places.

The original feene for aiting of plays was as fimple as the reprefentations themfelves: it confifted only of a plain plot of ground proper for the occation, which Was in fume degree fladed by the neighbouring trees, whofe branches were made to meet together, and their vac.uncies fupplied with boards, Rticks, and the like; and to complete the fhelter, thefe were fometimes covered with ikins, and fonctimes with only the branches of other trees newly cut down, and full of leaves. Afterwards more artificial fcenes, or feenical reprefentations, were introduced, and paintings uied intead of the objects themfelves. Sienes were then of three forts; tragic, comic, and fatyric. The tragic feene reprefented Itately magnificent edifices, with decorations of pillat s, flatues, and other things fuitable to the palaces of kings : the comic exhibited private houfes with balcomies and windows, in imitation of common buildings: and the fatyric was the reprefentation of groves, mountains, dens, and other rural appearances; and thefe decorations either turned on pivots, or flid along grooves, as thote in our theatres.

To keep clofe to nature and probability, the fcene fhould never be fhifted from place to place in the courle of the play: the ancients were pretty fevere in this reipect, particularly Terence, in come of whofe plays the fiene never thifts at all, but the whole is tranfacted at the door of fome old man's houfe, whither with inimitable art he occalionally brings the actors. The French are pretty ftrict with eefpect to this rule; but the Englith pay very little regard to it.

Scene is alfo a part or divifion of a dramatic poem. Thus plays are divided into acts, and acts are again fubdivided into feenes; in which fenfe the feene is properly the perfons prefent at or concerned in the action or the flage at fuch a time; whenever, therefore, a new actor appears, or anl old one difappears, the action is changed into other hands; and cherctiore a new icene then commences.

It is nne of the laws of the fage, that the feencs be well connected; that is, that one fucceed another in fuch a manner as that the tage be never quite empty till the end of the act. See Poetry.

SCENOGRAPHY, (fiom the Greek, oxwo forre, and rpacn defription), in perfpective, a reprefentation of a body on a perfpectien plane; or a defcription thereof
in all its dimenfons fuch as it appears to the eje. See sicptic. Perspective.

SCEPTIC, \(\sigma x a \pi\) ıияs, from \(\sigma x \varepsilon \pi \tau \circ \mu z t\), "I confider, look about, or deliberate," properly lignifies confideratize and inquiftive, or one who is always weighing reafons on one fide, and the other without ever deciding between them, \(1 t\) is chiefly applied to an ancient feet of philofophers founded by Pyrrho (fee Pyrrho), who, according to Laertius, had various other den minations. From their matter they were called Pyrrbonians; from the diltinguilhing tenets or charafteritic of their philofoplyy they derived the name of \(A p o-e i c i\), from a a poiu, " to doubt ;" from their fufpenfion and hefitation they were calld ephe日lici, from etex:ur, "to ltay or keep back;" and lafly, they were called zetitici or feckers, from their never getting beyond the fearch of trut.?

That the fceptical phlufophy is abfurd, can admit of no difpute in the prefent age; and that many of the followers of Pyrrho carried it to the moit ridiculous height, is no lefs true. But we cannot believe that he himfelf was fo extravagantly fceptical as has fometimes been afferted, when we reflect on the particulars of his life, which are till preferved, and the refpectfol manner in which we find him mentioned by his contemporaries and writers of the firft name who flourifhed foon after him. The truth, as far as at this diftance of time it can be difcovered, feems to be, that he learned from Democritus to deny the real exiftence of all qualities in bodies, except thofe which are effential to primary atoms, and that he referred every thing el.e to the perceptions of the mind produced by external objects, in other words, to appearance and opinion. All knowledge of courfe appeared to him to depend on the fallacious report of the fenfes, and confequently to be uncertain; and in this notion he was confirmed by the general ipirit of the Eleatic fchool in which he was educated. He was further confirmed in his ficepticitm by the fubtilties of the Dialeftic fchools, in: which he had been inftru:ted by the fon of Stilpo; choofing to overturn the cavils ot fophiftry by recurring to the doctrine of univerfal uncertainty, and thus breaking the knot which he could not unloofe. For being naturally and habitually inclined to confider immoveable tranquility as the great end of all philofophy, he was eafily led to defpife the diflenfions of the dogmatifts, and to infer from their erdlef's dilputes, the uncertainty of the queltions on which they debated; controverly, as it has often happened to others, becoming alio with refpect to him the parent of fcepticifm.

Pyrrho's doctrines, however new and extraordinary, were not totally difregarded. He was attended by fevcral fcholars, and fucceeded by feveral followers, who preferved the memory of his notions. The moft eniinent of his followers was Timon (See Timon), in whon the public fucceffion of profeffors in the Pyrrhonic Cohool terminated. In the time of Cicero it was a'mont extinct, having fuffered much from the jealoury of the dogmatilts, and from a natural averfion in the human mind to acknowledge total ignorance, or to be left in abfotute darknefs. The difciples of Timon, however, itill continued to profefs fcepticifm, and their notions were cmbraced privately at leat by many others. The fchool itfelf was afterwards revived by Pto!æmeus a Cyrenian, and was continued by Æenefidemus a contemporary ofCicero, who wrote a treatife on the principles of the Pyrthonie philofophy, the heads of which are preferv al by

Photius. From this time it was continued through a been noticed elfewhere (fee Miracle, Metarhysics, Scepticifus
feries of preceptors of little note to Sextus Empiricus, who alfo gave a fummary of the feeptical doctrine.

A fyitem of philofophy thus founded on doubt, and clouded with unsertainty, could neither teach tences of any importance, nor preferibe a certain rule of conduct; and accordingly we find that the followers of feepticifm were guided entirely by chance. As they could form no certain judgment refpeaing good and evil, they accidentally learned the folly of eagerly purfinisy any apparent good, or of avoiding any apparent evil; and their minds of courfe fettled into a flate of undifurbed tranquillity, the grand poftuatum of their fyften.

In the fehools of the feeptics we find ten difitict topics of argument urged in fupport of the doatrine of uncertainty, with this precaution, however, that nothing could be politively afferted either concerning their nunsber or their force. Thefe arguments chiefly refpect objects of fenfe: they place all knowle lge in appearance; and, as the fame things appear very different to different people, it is impoffible to fay which appearance mont truly exprefics their real nature. They likewife fay, that nur judgment is liable to uncertainty from the circumftunce of frequent or rare occurrence, and that mankind are continually led into different conceptions conreaning the fume thing by means of cufom, lav, fabuhus tales, and eflablithed opininas. On all thefe accounts they thiak every buman judgment is liable to mertainty; and ennceming any thing hey can on!'y affere that it feems to be, not that it is what it feems.

This doubsful reafoning, if rea'oning it may be cal!ed, the fceptics extended to all the fiences in which they difouvered nothing true, or which could be abfolutely afferted. In all nature, in phyfies, morals, and theology, they found contradictory opininus, and inexplicable or incomprehenfib'e phenomena. In phylics, the appearances they thought night be deccitful; and refpecting the nature of God and the dutics of morality, men were, in their opinion, equaliy ignorant and uncertain. Tonve:turn the fophillical arguments of thefe feeptical reafoners would be no difficult matter, if their reationing were worthy of confutation. Indeed, their great principle is fufficiently, though thortly, refuted by Plat", in thefe words. "When you fay all things are incomprehenfible (fays he), do you comprehend or ennceive that they are thus incomprehenfible, or do you rot? If you d , then fomething is comprehenfible ; if you do no, there is no reafon we fhmuld helieve you, fince ycu do not comprehend your own afertion."
liut feepticifm has not been confined entirely to the ancients and to the followers of Pyrrh. Numerous foptics have arifen alfo in modern times, vary ing in their principles, manners, and characker, as chance, prejudice, venity, weaknefs, or indolence, prompted them. The creat ohjea, however. which hey feem to have in view, is to cverturn, or at leaft to weaken, the evidence of analocy, experience, and tettimony; though fome of them have even attempted to fhow, that the axioms of geometryare nncertain, and its demonftrations inconclufive. This laft attempt has not injeed been often mate: het the chinf aim of Mr Hume's philofophical writng, is to introdnce doubts intn every branch of phyfics, metat t.yfics, hiflory, eshics, and thoo.ogy. It is needlefs to give a fpecimen of his reafonings in fupport of modera fespticilm. The molt important of them have Vor. XV' \(\quad 4\) T' Rance;
and Philosophy, no 41 .) ; and fuch of our readers as have any relith for fpeculations of that nature can be no Atrangers to lis Elfays, or to the able confutations of them by the Doions Rcid, Campbell, Gregory, and Beattic, who have likewife expofed the weaknefs of the foeptical reafonings of Des Cartes, Malbranche, and other philofnthers of great fame in the lame fchorl.

SCEPTICISM, the doftrines and cpinions of the fceptics. Sec the preceding article.
SCEPTRE, a kind of royal faff, or batonn, berne on fulemn oceafions by kings, as a badge of their command and autlority. Nicod deri:es the word from the Greck oxnatpor, which he fiys originally fignified "a javelin," which the ancient kings ufually bore as a badge of their authority; that infrument being in very great vencration among the heathens. Bu: oxnerpor does not proparly fignify a javelin, but a naff to reft upsn, from exntew, innitir, "I lean upon." Accordingly, in the fimplicity of the carlier ages of the world, the fepertes of kings were no other than long walking-Itaves: and Ovid, in fpeaking of Jupiter, deferibes him as refting on his feeptre (Met. i. v. 178.) The fceptre is an enfign of royalty of greater antiquity than the crown. The Greek tragic and other pocts put feeptres in the hands of the mof ancient kings they ever introducs. Jultin obferves, that the feep're, in its original, was an bafta, or fpear. He adds, that, in the motl remote antiquity, men adored the bafle or feeptres as immortal gods; and that it was upon this account, that, even in his time, they ltill furnifhed the gods with feeptres. - Neptune's feeptre is his trideat. 'Tarquin the Elder was the firft who affumed the feeptre among the Romans. Le Gendre tells us, that, in the firft race of the Fienclu kings, the feeptre was a golden rod, almoft always of the frme height with the king who bote it, and crooked at one end like a crozier. Firequently inftead of a feeptre, kings are feen on medals with a palm in their hand. Sce Kegalia.

SCHAFFERA, in botany : A geaus of the tetrandita nider, belonging to the diuccid clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is quadripetalous; the corolla is quadripetalous, quinquepetalous, and often wanting ; the fruit is a bilocular berry with none feed. Oi this there are two fpecies, b. th natives of Jum.ica; and grow in the lowlands near the fea : viz. I. The Complecta. 2. Interifora.

SCHAFFHAUSEN, a large, handiome, and frong town of Swillerland, capital, of a canton of the f.me name, with a cafle in the form of a citadel. It is well built, with fine large ftrects, and ajor:ed with feveral foundati ns; and the greaten part of the houfes are painted on the outfide. It is wel! frrifis.l, and the cathedral is the largen chureh in Swifferland; befides which, the minifter, with the monaftery a Jjnining thereto, the arfenal, the town houfe, the creat clock (which frows the courie of the fun and moon with their eclipfes), and the fone bridge over the Rhine, are well worth the nbferdation of a traveller. That river is of great confequence to the inhajutants with regard to trode. E. Leng. 8 51. N. L.t. 47.39.

The Cazon of Schltrlutesen, ia Swi.Terland, is bounded na the sorth and wefl ty Suathi, nu the ealt by the cansen of Zarich, and the bithoprick of Con-

\section*{S C H}

Stactulc, S. hede.
ftance ; and on the fouth by the fame, and by Thurgaw. It is 22 miles in length, and 10 in breadth; but produces all the neceliaries of life, as wine, fih, wood, Hlax, hortes, theep, wool, black cattle, and deer. The principal town is of the fame name.

SCHEDULE, a feroll of paper or parchment, annexcd to a will, leafe, or other deed; containing an inventory of goods, or fome other matter omitted in the body of the deed.-Tbe word is a clininutive of the Latin fobeda, or Greek oysd, a leaf or piece of paper.

SCHEELE (Charles-William), was born on the \(19^{\text {th }}\) of December 1742, at Stralfund, where his father keft a flop. When he was very young, he received the ufual infructions of a private fchool; and was afterwards advanced to an academy. At a very early arre he thowed a ftreng defire to follow the profellion of an apothecary, and his father fuffered him to gratify his inclinations. With Mr Bauch, an apothecity at Gotterburgh, he paffed his apprenticehip, which was completed in fix years. He remained, however, fome time longer at that place, and it was there that he fo excellently laid the firf foundations of his kndwledge. Among the rarious books which lie read, that treated If chemical fubjeits, Kunckel's Laboratory feems to have been his favourite. He ufed to repeat many of the experiments contained in that work privately in the night, when the reft of the family had retired to reft. A fiend of Scheele's had remarked the progrefs which he had made in chemiftry, and liad afked him by what inducements he had been at firlt led to ftudy a fcience in which he had gained fuch knowledge? Scheele returned the following anfwer: "The firt caufe, my friend, arofe from yourfelf. Nearly at the beginning of my apprenticenthip you advifed me to read Neuman's Chemiftry; from the perufal of which I became eager to make experiments myfelf; and I remember very well how I mixed together, in a conferve.glafs, oil of cloves and fuming acid of nitre, which immediately took fire. I fee allo ftill before my eyes an unlucky experiment which I made with pyrophorus. Circumftances of this kind did but the more inflame my defire to repeat experiments." After Scheele's departure from Gottenburg, in the year 1765 , he obtained a place with Kalliom, an apothecary at Malmo. Two years afterwards he went from thence to Stoch holm, and managed there the fhop of Mr Scharenberg. In 1773 , he changed this appointment for another at Upfal, under Mr Loock. Here he was fortunately fituated; as, from his acquaintance with learned men, and from living free accefs to the Univerfity Laboratory, he had olportenities of increafing his knowledge. At this q1ace alfo he happily commenced the friendfhip which fubfited between him and Bergman. During his refidence at this place, his Royd H:ghnefs Prince Henry of Pruffia, accompanied by the Duke of Sunderiand, vifited Upfal, and chofe this opportunity to fee the Academical Laboratory. Scheele was accordingly appointed by the Univerfity to cxlubit fome
chemical experiments to them. This office he undertonk, and flewed fome of the moft curious procefles in chemiftry. The two Princes afked him many queftions, and expreffed their approbation of the anfivers which he returned to them. The Duke afked him what countryman he was, and feemed to be much pleafed when Scheele informed him that he was born at Stralfund. At their departure they told the profeffor, who was prefent, that they fhould efleem it a favour if he would permit the young man to have free accefs to the Laboratory, as often as he chofe, to make experiments.

In the year 1777 Scheele was appointed by the Medical College to be apothecary at Koping. It was at that place that he foon flowed the world how great a man he was, and that no place or fituation could confine his abilities. When he was at Stockholm he thewed his acutenefs as a chemift, as he difoovered there the new and wonderful acid contained in the fparry fluor. It has been confidently afierted, that Scheele was the firt who difcovered the nature of the aerial acid; and that whillt he was at Upfal he made many experiments to prove its properties. This circumftance might probably have furnifhed Bergman with the means of handling this fubject more fully. At the fame place he began the feries of excellent experiments on that remarkable mineral fubftance, manganefe; from which inveftigation he was led to make the very valuable and interefing difeovery of the dephlogitticated marine acid. At the fame time he firlt obferved the ponderous earth.

At Koping he finifhed his differtation on Air and Fire; a work which the celebrated Bergman molt warmly recommended in the friendly preface which he wrote for it. The theory which Scheele endeavours to prove in this treatife is, that fire confifts of pure air and phlogilton. According to more recent opinions (if inflammable air be phlogillon), water is compofed of there two principles. Of thefe opinions we may fay, in the words of Cicero, "Opiniones tamn varia funt, tamque inter Se diffidentes, ut altcrum profecio fieri potefl, ut carum mulla, allerum certe non potefl ut plus una, vera fit." The author's merit in this work, exclufive of the encomiums of Bergman, was fufficient to obtain the approbation of the public; as the ingenuity difplayed in handling fo delicate a fubjea, and the many new and valuable obfervations (A) which are difperfed through the treatife, jufty ensitled the auchor to that fame which his book procured him. It was fpread abroad through every country, became foon out of print, was reprinted, and tranilated into many languages. The Englifh tranflation is enriched with the notes of that accurate and tanly philofophic genius Richard Kirwan, Efq.

Scheele now diligently employed binfelf in contributing to the Tramfactions of the Academy at Stockholm. He firt pointed out a new way to prepare the falt of benzoin. In the fame year he difcovered that arfenic, fieed in a particular manner from phlogifton, partakes of all the properties of an acid, and has its peculiar affinities to other fubfances.
(A) Scheele mentions in this work, in a curfory way, the decompofi ion of common falt by the cals of lead. Mr Turner, a gentleman who happily unites the fill of the mannfacturer with the knowledge of the philofophic chemin, has allo all the mesit of this difcovery, as he obferved the fame fatt, without having been indebted to Scheele's hint on this fubjet. Mr Turner has done more; he has converted this difcovery to fome ufe in the ar:s; he produces mineral alkali for fale, arifing from this decompofition; and from the lead which is united to the marine acid he forms the beautiful pignent called the patcont yellozu

In a Differtation on Flint, Clay, and Alum, he clearly overturned Beaumés opinion of the identity of the filiccous and argillaceous earths. He publifhed an Analyfis of the Human Calculus. He fhewed alfo a mode of preparing mercurius dulcis in the humid way, and improved the proceis of making the powder of A1garoth. He analyfed the mineral fubfance called molyblena, or flexible black lead. H: difcovered a beautiful green pigment. He fhowed us how to decompofe the air of the atmofphere. He difcovered that fome neutral falts are decompofed by lime and iron. He decompofed plumbago, or the common black laad. He obferved, with peculiar ingenuity, an acid in milk, which decompofes acetated alkali; and in his experiments on the lugar of milk, he difoovered another acid, different in fome refpects from the abovementioned acid and the common acid of fugar. He accomplifhed the decimpofition of tungteis, the component parts of which were before unknown, and found in it a peculiar acid earth united to lime. He publifhed an excellent differtation on the difierent forts of xther. He found out an caly way to preferve vinegar for many years. His inveltigation of the colouring matter in Pruffian blue, the means he employed to feparate it, and his difcovery that alkali, fal anmoniac, and charcoal, mixed together, will produce it, are Arong marks of his penctration and gerius. He found out a peculiar fiwect matter in expreffed oils, after they have been builed with litharge and water. He fhewed how the acid of lemons may be obtained in cryftals. He found the white powder in rhubarb, which Model thought to be felenite, and which amounts to one-feventh of the weight of the root, to be calcareous earth, united to the acid of forrel. This fuggefted to him the examination of the acid of forrel. He precipitated acetated lead with it, and decompofed the precipitate thus obtained by the vitiolic acid, and by this procefs he obtained the common acid of fugar ; and by flowly dropping is folution of fixed alkali into a folution of the acid of fugar, he regenerated the acid of forrel.-From his examination of the acids contained in fruits and berries, he found not one fpecies of acid alone, viz. the acid of lemon, but another alfo, which he denominated the malacevus acid, from its being found in the greatelt quantity in apples.

By the decompofition of Bergman's new metal (liderite) he fhewed the truth of Meyer's and Klapmeth's conjecture concerning it. He boiled the calx of fidenite with alkali of tartar, and precipitated nitrated mercury by the middle filt which he obtained by this ope. ration; the cals of mercury which was precipitated was found to be united to the acid of pluf fphorus ; fo that he demonftrates that this calx was phofphora ed iton. He found alfo, that the native l'rultian blue contained the fame acid. He difcovered by the fame means, that the perlate acid, as it was called, was not an acid fui gencris, but the phofphoric united to a fmall quantity of the mineral alkali. He fuggefted an improvement in the procefs of obtaining magnefia from Epfom falt; he advitcs the adding of an equal weight of common falt to the Epfom falt, fo that an equal weight of Glauser's f.llt may be obtained: but this will not fincecal unlet's in the cold of wimter. There are the valuable difeoveries of this great philofopher, which are to be found in the Tranfations of the Royal So-
ciety at Stockhnim. Mof ot his effays have been publiflied in French by Madame Picardet, and Mor.f. Morreau of Dijon. Dr Beddoes has alfo made a very valuable prefent to his countrymen of an Englifh tranfa: tion of a greater part of Scheelc's differtations, to which he had added fome ufeful and ingenious notes. The following difcoveries of Scheele are not, we b:lieve, publifhed with the reft. He fhewed what that fubrtance is, which lias been generally called 'the earth of the fluor fpar.' It is not produced unlefs the flun acid mect with filicco os eath. It appears from Scheele's experiments to be a triple falt, coafinting of flint, acid of fluor, and fixed alkali. Schecle proved alfo, that the fluor acid may be produced without any addition of the vitriolic or any mineral acid: the fuor is melted with fixed alkali, and the Huorated alkali is decompofed by acetated lead. If the p:ecipitate be mixed with charcoal cult, and expofed in a retort to a Arong heat, the lead will be revived, and the acid of Auor, which was united to it, will pafs into the receiver poifelfed of all its ufual properties. This feems to be an ingenious and unanfwerable proof of its exiftence.

He obferved, that no pyrophorus can be made unlefs an alkali be prefent; and the reafon why it can be prepared from alum and coal is, that the common alum always contains a little al!ali, which is added in order to make it cryltallize; for if this be feparated from it, no pyrophorus can be precured from it. His laft differtation was his very valuable obfervations on the acid of the gallnut. Ehrhart, onc of Schsele's mof intimate friends, allerts, that he was the dicoverer of both of the acids of fugar and tartar. We sre alfo indebted to him for that matlerpiece of chemical dicompofition, the feparation of the acid of phofphorus from bones. This appears from 2 letter which Scheele wrote to Galhn, who has generally had the reputation of this great difcovery. This acid, which is fo curious in the cye of the chemint, begins to diaw the attention of the phyfician. It was firl ufed in medicine, united to the mineral alkali, by the ingenious Dr Pearfon. The value of this addition to the materia medica cannot be better evinced than from the increafe of the demand for it, and the quantity ofit which is now prepared and fold in London.

We may famp the character of Scheeie as a philofopher from his many and important difooveries. What concerns him as a man we are informed of by his fricnds, who affirm, that his moral character was irreproachablc.

On the 19th of May \({ }_{77} 86\), he was confined to his bed; on the 2 tit he bequeathed all of which he was pofferfed to his wife (who was the widow of his predcce:for at Koping, and whom he had lately married) ; and on the fame day he departed this life. So the world loft, in lefs than two years, Bergman and Schecle, of whom Sweden may juntly boaft; wo pisilofophers, who were beloved and lamented by all their contemporaries, and whote memory ponerity will never ceafe mon gratefully to revere.

SCHEINER (Chritopler), a Gcrman mathematician altronomer, and Jefuit, eminent for be:ng the firit who difcovered fous on the fun, was bornat Schwaben in the territory of MiJdleheim in 1575 . He frof difcovered foots on the fun's difk in 1611, and made obfervations on thefe phanomena at Rome, until at Iength reducing them to order, he pubilithed them in ore vol. folio in 1630 . He wrote alfo fome fmaller things
S.hecle, Siheiner.
sheid relating to mathematics and philofophy; and died in \(16,0\).
SCHELD, a river which rifes on the confines of Picards, and runs northeaft by Cambray, Valenciennes, T'ournay, Oudenarde, \&ic. and receiving the Lis at Ghent, runs calt by Dendernoond, and then north to Antwerp: below which city it divide, into two branches, one called the Weper-Stheld, which feparates Flanders from Zealand, and difcharges itfelf into the fea near Ilufhing ; and the other called the Ofer Scleeld, which runs by Bergen-rp-znom, and afterwards between the inands Beveland and Schowen, and a little below falls into the fea.

SCHEMNITZ, a town of Upper Hungary, with three cafles. It is famous for mines of filver and other metals, as alfo for hot briths. Near it is a rock of :I flining blue cnlour mixed with green, and fome foots of yellow. E. Long. 19.0. N. Lat. 4.8. 40.

SCHERARIIA, in botany; a genus of the monogynis order, belonging to the terrandria clafs of phants. The corvila is monopetalous and funncl Alaped; there are two three-tonthed fecds.
schietLAND. See Shetland.
SCHEUCHZERIA, in botany: A genus of the urigsnia usder, b:longing to the hewandria clafs of plalts; and in the natural method ranking under the fith order, Trife atodice. The calys is fexpartite; there is no conolla, nor are there anv Ryles; there are three inllated and monofernions capfules.

SCHIECIIS, or Schech, among the Arabs, is a name applied to their nobles. "Among the Bedouins," Giays Niebuhr, "it belongs to every noble, whether of the higheft or the loweft order. Their nobles are very numerous, and compóe in a manner the whole nation; the plebeians are invariably actuated and guided by the fchiechs, who fuperintend and dirct in every tram: action. The fchiechs, and their fubjects, are born to the life of thepherds and foldiers. 'The greater tribes rear many camels, which they either fell to their neighbours, or employ them in the carriate of goods, or in military expeditions. The petty tribes keep flocks of theep. Among thofe tribes which apply to agriculture, the lihiechs live always in tents, and leave the culture of their grounds to their fubjeats, whofe dwellings :re wretched luts. Schiechs always side on horfes or dromedaries, infpecting the conduct of their fubjects, vifiting their friends, or hunting. Traverfing the defert, where the horizon is wide as on the ncean, they perce've travellers at it diftance. Astravellers are feldom to be met with in thofe wild tract, they ealily diffover fuch as pafs that way, and are tempted to pillage them when they find their own paity the frongeft."

SCHINITH, in botany: A gemus of the decandria order, belonging to the diocia clafs of plants; and in the natural methed ranking under the \(43^{\text {d }}\) order, Dumofe. The male calya is quinquefid; the petals five. The female flower is the fame as in the malc; the berry tricocons.

SChiras, or Schirauz, a large and famoustown of Perlia, cupital of Farfiftan, is three miles in length from eaft to well, but nit fo much in bread th. It is feated at the north-well end of a fpacious phain furrounded with very high hills, under one of which the town ftands. The houfes are built of luicks diced in the fun; the reofs are flat and tersaced. There are 15 handrome
mofques, tiled with flones of a bluifh green colour, and
lined within with black polithed marble. There are many large and beautiful gardens, furrounded with walls fourteen fect high, and four thack. They contain various kinds of very fine trees, with fruits almoft of every kind, belides vari us beautitul flowers. The wints of Schiras are not only the beit in Perfia, but, as fome think, in the whole woild. The women are much addicted to gallantry, and Schiras is called an earthly paradife by lome. The ruins of the famous Pericpolis are 30 miles to the north-eaft of this place. E. Long. 56. O. N. Lat. 29. 36.

SCHISM, (from the Greek, oxiनux, clif, fiflure), in its general acceptation lignifies divifion or feparation ; but is chiefly ufed in fpeaking of feparations happening from diverlity of opinions among people of the fame religion and faith.

Thus we fay the fchifm of ten tribes of Judah and Benjamin, the filifin of the Pcrlians from the Turks and other Mihometans, \&c.
Among ecclefiattical authors, the great fchifnu of the Weft is that which happened in the umes of Clement VII. and Urban VI, whach divided the church for 40 or 50 jears, and was at lenerth ended by the election of Martin V. at the council © Conliance.

The Romanills number \(3+\) Ichims in their church.
 tion of religion in that kingdom. Thole of the church of England apply the term fobifin to the leparation of the nonconfurnifts, viz the pretby terians, independents, and anabaptilts, for a further teformation.

SCHISTUS, in mineralogy, a name given to feveral differcnt kinds of tones, but more elpecially to fome of the argillaceous kind; as,
1. The bluith purple fchinus, fchifus tegularis, or common roof-flate. This is fo fof that it may be flightly fcraped with the nail, and is of a very brittie lamellated texture, of the fpecific gravity of 2,876 . It is fufible fer \(f e\) in a ftrong heat, and runs ints a black fcoria. By a chemical analyfis it is found to confift of 26 parts of argillaccous earth, 46 of filiceous carth, 8 of magnefia, 4 of calcarenus earth, and \(1+\) of iron. The dark-blue flate, or fchillus ferptorius, contains more marnelia and lefs iron than the common purple fchinlus, and effervefces more brilkly with acids. Its fpecific gravity is 2,7 or .
2. The pyritacents chiftus is of a grey colour, brown, blue, or black; and capable of more or leís decorrpolition by expofire to the air, according to the quantity of pyritous matter it comains and the ftate of the iron in it. When thas laft is in a fensi phlogificated ftate it is eafily decompofed ; bat very flowly, or not at all, if the cals is much dephloginicated. The aluminous fchirus belongs to this fpecies.
3. The bituminous fchiftus is generally black, and of a lamellated texture, of various degrees of hardnef, not giving fire with fteel, but emiting a frong fmell when heated, and fumetimes without being heated. M. Magellan mentions a fpecinien which burns like coal, will a Itiong fmell of mineral bitumen, but of a yellowith brown, or rather dak ath colour, found in Yorkthire.This kind of febifus does not fhow any white mark when fcratched like the other fchisus.

SCHMEDELIA, in botany: A genus of the digynia order, belonging to the citandria clafs of plan's.

\section*{Schocnubates} 1 Schomber.

The caly \(x\) is diphyllous; the corolla tetrapetalous; the germina pedicellited, and longer than the llower.

SCHOENOBATES (from the Greek, oxerra, a rop: ; and fur*, I rwalk), a name which the Greeks gave to their repe-dancers: by the Romaris called funambuli. See Rofe-danclr min Funambulus.
The folenobates were flaves whote mafters made meney of them, by eutertaining the people with their feats of âtivity. Mercurialis die arte gymuafli:a, lib. I1I. gives us five ligures of fowembatis engiaven after ancicnt foncs.

SCIFOENCS, in botuny: A genus of tice monogymia order, behneing to the tiansria clats of phants; and in the natural method ranking un der the 3 inrder, Calmarix. The gluñes are paleaceons, mivalves, and t.:ishict ; theic is no corolld, and only one romuth deel bictecent the granes.

SCHOLASTIC, fomething belonging to the fohrols. Sesesment.

Seriolastic \(D\) vinaty, is that purt or \(f_{\mathrm{i}}=\) cies of divini \(y\) Which clears d.. 1 ditculles of telti mo by \(r\) aton margus ments ; in which fenie it tents, in fums mealive, niphor
 af fathers. councils, \& . Tro echnodivinity is 17 w fallen into contempt ; and is icarce reparded anywiere but in fome of the uaverfites, where they are fill by the relnte:s ubliged to teach it.

SChOLIASi, or Commentator, a grammarian who write, filloiza, that is, nutes, glolles, sce. upna ancientauthors whe have witten inthe lear..ed languages. Seet ten next d-ticle.

SCHOLIUM, a note, annotation, or remark, necafunaty made on tome pallage, prof ofition, or the like. This term is much ufed in gennetry and other parts of mathemat es, where, after demonftating a propofition, it is cuftonary to puint out low it might be done fome other way, or to give fome advice or precaution in or der to prevent mifti.kes, or add fome partizular ufe or application therenf.

SCHOMBERG (Frederic-Armand duke of), a difinsuilhed officer, frung finm an iliuftrious family in Germany, and the fon or count schomberg ly an Englitio lady, dangher of inad Dudley, was bern in iGces. He was initited into the military lifs under FrederickI fenty prince of \(O\) an re, and afterwards frred under lis ion Wiliim II. of Or.nge, who highly efeemed \(1: \mathrm{im}\). He then repaired to the court of France, where hi. reputaiot, was to well known, that he obtained the goverrment of Gravelines, of Fumee, and he turiomading countrics. He was reckned inferior to no general in thil liaigfom except marefohal Turenne and ihe prince of Conde; men of fiuch exalted eminence that it was no difgrace to acknowledge their fuperinrity. The French court thinking it necelfary io dimifh the rowcr of Spain, fent Schomberg to the affillance of the P. rtuguefe. who were engaged in a war wi.h that conntry refpeaing the fuscifien to their thr ne.Schomberg's military talents gave a tutn to the war in fivour of his allies. The court of Spain was bliged to folicit for peace in 1668, and n ackno whedge the houfe of Braganza as the jult, to the throne of Porcugal. For his great lervices ? he was created count Mentola in Portugal; and a penficun of;cco 1. was befowed upon him, with the revertion to his heirs.

In 1673 he came over to Englind to command the
army; but the Enclith at that time being difgufed sthonker with the Irench nation, Siromberg was tulpeeted of coming, nucr with a defign to corrupt the army, and bring is under Irench difciplise. He thesefore found it neceflary to return to lirance, whach he foon left, and went to the Neithetlinds. I's the month of Jure 1676, he forced the promice of Orange to raite the liege of Maeltricht; and it is aid he was than raited to the rank of marechal if France. Nut the French Diäionuire Ifi crigte, whefe informatoon on a point of this nature ou fit to be autaentic, fays, that he was iavented with this honour the fane jeat in whith he tok the Fincets of Bellegarde Irom the Spanards white ferving in Porng.t.

Upon the revecution of the ediat of Nintes, when the perfention cummenced atan't the Protelant, Sehomberg, who was of that perlination, requelied leave tn setive intn his own cuntry. 'lhis requald was refufed; but he was permitted tis take r.fuge in Pertugal, where he had restin to expef lee would be hindly teceived en account o! part frrvices. But the ecligious
 from acceptiag althance from a haretic when their king lom wa thrcatcne: with fubverfion, c uld not permit them tw give him theler when he came for protection. The inquivition interfered, and oblifed the kirg to fend him awsy. H: then went to Holland by the way of England. Having accepted an invitation from the electur of Brandenbury, he was invefted with the geverument of Ducal Puifia, and appointed commander in chief of the eleinots forces. When the prince of Orange frited to Lingland to take poffeffion of the crown which his father-it law J. ames II. had abdicated. Schomberg obsuined permillion from the clectne of Brandenbuig to accompany him. He is fuppofed to have been the author oi an ingenious Aratigem which the prince cmployed after his anical in Londun to difcover the fentiments of the people refiped ing the revolution. The ilratagem was, to fread an alirm over the country that the Ir:th were approaching with fire and fword. Wn a the prine was ell.at) thed on the throan of England, Schomberg was appointed commander in chief of tice lirses and mouter of the ordnance. In April 1 Geg he was m.de kni he of the galter, and naturalizes by ect of I'sriniment a as in May following was created a baron, ent, muquis, and suke of the king dom of Erathe, by the name and title of buros Teys, cirl of Bretord, marquis of HI rwich, and dute of Schombers. 'The Honce of Cimmens vuicd to him L. 100,000 as a reward for his fervices. Of this he enly received atimill part; hu: after his death a penfion of L. 5000 a. year was belfowed upon his fim..

In Auguft 15sig he was fent in Ireland in reduce that kingdem in nbedienic. When he urived, he found himielf at the lead of an army ennfiling orly of 32,000 foot and \(=000\) houfe, while ki.ng Jances commanded an army three time: more numen nil. Sehomberg thought it dangerons to engage with fo uperior a force, and being di'app inted in his promifed fupplies from Englara, judged it prucerit on rermain on the d. ientive. He thr r:tire poited himefelf at 1)andalk, abriat five or lix miles ditance fiom Jam:s, whin was enc ampel at Ardee. For fix wee's he remained in thin prition, withont atemptine to g ve bittle, while from the wetnef, f the feufon he loft nearly the half of his amy. Schomberg was
ce! !ent judyes admired his coinduct as a diplay of great military talents. Had he rifked an engagement, and bern defeated, Ireland would have been loft. At the famous battle of the Boyne, fought on the ift July 1 ago, whuch decided the fate of Jame:, Schomberg palled the river at the head of his cavalry, defeated eight icpuadrens of the enemy, and broke the Irifh infantry. When the French Proteftants lof their commander, Schomberg went to rally and lead them on to charge. While thus engaged, a party of king James's guards, which had been feparated from the reft, paffed Schomberg, in attenpting to rejoin their own army. They attacked him with great fury, and gave him two wounds in the head. As the wounds were not dangerous, he might foon have recovered from them ; but the French Proteftants, perhaps thinking their general was killed, immediatcly fired upnn the guards, and fhot him dead on the fpot. He was buried in St Patrick's cathedr.al.

Bifhop Burnet fays, Schomberg was "a calm man, of great application and conduct, and thought much better than he fpoke; of true judgment, of exact probity, and of an humble and obliging temper."

SCHOOL, a public place, wherein the languages, the arts, or fciences, are tanght. Thus we fay, a grammar fcbool, a writing fchool, a fchool of natural philofophy, \&c.-The word is formed from the Latin folola, which, according to Du Cange, fignifies difcipline and correftion; he adds, that it was anciently uled, in general, for all places where feveral perfons met together, either to fudy, to converfe, or do any other matter. Accordingly, there were fibola palatine, being the feveral polts wherein the en perar's guards were placed; fchola futariarum, fobcha gentilium, Sc. At length the term paffed alfo to civil magiftrates ; and accordingly in the code we mect with fobolu chartulariorum, fchola agentium, Eic.; and even to ecclefiaftics, as fihola cantorum, foholu facerdotum, ©ic.

The Hebrews were always very diligent to teach and ftudy the laws that they lad received from Mofes. The father of the family fudied and tanght them in his own family. The Rabbin taught them in the temple, in the fynagogues, and in the academies. They pretend, that even bef re the deluge there were fchools for knowledge and piety, of which the patriarchs had the direction.They place Adam at their head, then Enoch, and latly Noah. Melchifedec, as they fay, kept a fchool in the city of Kajrath-fepher, othcrwife Hebron, in Paleftine. Abralam, who had been inftructed by Heber, taught in Chaldea and in Egypt. From him the Egyptians learned aftronomy and arithmetic. Jacob fucceeded Abraham is the office of teaching. The fcripture fay, he was "a plain mandwelling in tents;" which, accurding to the Chaldee paraphraft, is, " that he was a perfeet man, and a minifter of the houfe of doetrine,"

All this, indeed, mult be very precarious ard uncertain. It cannot be doubted but that Mofes, Aar \(\because\) D, and the elders of lirael, infructed the people in the wildernefs, and that many gond Ifraclites were very indalitions to influat their families in the fear of God. But all this dncs not prove to us that there were any fuch friools as we are now inquiring after. Under Jofhua we fee a kind of academy of the prophets, where
lived in the exercife of a retired and auftere life, in fludy, in the meditation and reading of the law of God. There were fchools of the prophets at Naioth in Ramah; 1 Sam. xix. 12. 20, \&ic. See the article Proриет.

Thefe fchools, or focieties of the prophets, were fucceeded by the fynagogues. See the article Synagogue.

Charity-Scuoozs are thofe fehools which are fet apart by public contributions or private donations for the inAtruction of poor children, who could not otherwile emjoy the benefits of education. In few countries are thefe more mumerous than in Great Britain, where charity and benevolence are characteriftic of the nation at large. They following is a fumnary view of the number of charity fchools in Great Britain and Ireland, according to the beft information at prefent, 1795 .
\begin{tabular}{|c|c|c|c|}
\hline & Schools. & Boys. & Girls. \\
\hline At London & 182 & 4442 & 2870 \\
\hline In other parts of South Britain, & 1329 & 19506 & \(39^{15}\) \\
\hline In North Britain, by the account publifhed in I786, & 135 & 5187 & 2618 \\
\hline In Ireland, for teaching to read and write only, & 168 & 2406 & 600 \\
\hline In ditto, erected purfuant to & & & \\
\hline his majelty's charter, and encouraged by his bounty & & & \\

\end{tabular}

Sunday-Schools are another fpecies of charicy-fchools lately inftituted, and now pretty common in Great Britain. The inftution is evidently of the firf importance; and if properly encouraged mult have a very favourable effect on the morals of the people, as it tends not only to preferve the children of the poor from feending Sunday in idlenefs, and of confequence in diffipation and vice, but enables them to lay in for the conduet and comfort of their future life a flock of ufeful knowledge and virtuous principles, which, if negletted in early life, will feldom be fought for or obtained amidft the hurry of bufinefs and the cares and temptations of the world.

The excellent founder of Sunday-fchools was Mr. Raikes, a gentleman of Gloucefterfhire, who, together with Mr Stock, a clergyman in the fame county, and who, we believe, was equally inftrumental in the bufinefs with Mr Raikes, fhewed the example, and convinced many of the utility of the plan. From Gloucef. terfhire the inflitution was quickly adopted in every county and almoft every town and parifh of the kingdom; and we have only further to remark on a plan to generally known, fo much approved, and fo evidently proper, that we hope men of eminence and weight will always be found !ufficiently numerous and willin. to beltow their time and countenance in promoting it to the utmoft of their powier.

SCHOONER,

\section*{S C H}

Schooner, SCHOONER, in fea-language, a fmall veffel with \(\underbrace{\text { Schorl. }}\) two malts, whufe main-\{ail and fore-\{ai] are fufpended from gaffs, reaching from the malt towards the ftern, and ftretched out below by booms, whole foremof ends are hooked to an iron, which clafps the malt fo as to turn therein as upon an axis, when the atrer-ends are fwung from one fide of the veffel to the other.

SCHORL, a precious fone of the fecond order, of which the varieties are, Siberian, ruby coloured, reddilh, grcen, brown, blue, and black; mother of eme. rald, dark green ; lapis cruifer, or the crofs flone; bar tchorl; horn blend, black, green, or blue; Cianite, blue fehorl; Thumjlcin; Laxnan's quadrangu'ar fikorl. Tianfarent fchorl is cliryltallized in polygoual prifms, generally: w, th four, fix, or nine fides; fime of them are fo fi.te as to pafs for gems of the filt order, efpe. cially for the emerald. In the emitranfarens fchorls there are litewile fome of great baaty, as the ruby coloured, lately difcovered in Siberia by counfellor Herman, in a bed of reddith argilla, mixed with fragments of lelt path, quartz, and mica, on a low granite mountain. The bed of argulla is evidently produced by the decompolition of granite ; which operatoon Herman fuppofes muft have fet at liberty the ruby fehorl formerly pent up in the chinks of filfures.! the decompoled part of the mountain. The difcovery is quite new, no fuch jpecies being before known, as it is as hard as the nirt order of precious itones, the diamond excepted, takes at fine polith, and equals in culour the oricntal ruby, though nut in tranfuarency.

Its ft mature is made up of fine cylindric columns, like needles coliected into bundles or treffes, lyng one on another in diflerent direstions, whllt eacn mdividuai column is made up of fine plates or laminx, like the gems. It is tulible per fe into a white tramparent glats, and melts impertectly with borax when calcined, as it docs with microcolmic falt and mineral alkali, into a 1 imal virreous globe, with litsle foos of a white enamel col ur. Acidshave no effes upin it, even when calcincd. Lattly, it lofis its colour in the fire, iner having firf iumed blue. The mo her of emenalds is lihewise a femitranparent fohorl, in the eponion of gome able naturants, although Mr Bormatures it to be a jade, we know not upun what athority.

The Itwature of the fomitran!? s.asent fchorls, and fome ef the tratiparent that are not fo perfectly didphanous as to cunceal their texture, is obicuicly ip.ury ; but that of tre opaque is cither filamentous, like afbetios, or hard and brittle hike threads of glifs, or it is conumbed of icales. Or this latt kind is that called birn llend, which is generally green or black; but there is a bedutitul variety of it found on the mount St Gothard, in bwitzorland, of a fine tky-blue colour covercd with lilver talk. Bar fehsil has been fund on the Carpathian mountains chryfallaed in prifins. Lap:s cruculer, of the crofs fone, is found fumetimes near Brazil in Switzerland, and there named C'autstein, or chiiltening fone; but uftener at Thum in Siaony, and therefore named there 'lhumucin. It is a fichorl in form of a crofs: that of Brazil \(c\) nlifts of two hesdgonal chayfals. The exact cryitallization of the other is unknown to us

Monl countries produce fehorls. Rufia is particulatly rich inf fonolls. I. is even difficult to point out all the different places of the empure which produce them;
but we fhall take notice of thofe molt remarkable, particularly new difcoveries. The ruby-coloured fchorl mentioned above was found by Mr Herman at Sarapoulky, a village in the government of Perm, ten verits from Mourlinky Slabode, in Siberia. The Siberian infpeetor, Mr Laxman, has lately difcovered in the mountain Alpeftria, on the river Sleudenka near the lake Baikal, the following new fchorls. Firf, a green tranfparent fchorl, of to brittle a nature as not to bear carriage without breaking into fmall pieces tmincated. Pallas is poficive in declaring this dark green fehorl a hyacinth. This laft has often fome of the finall ycllowith white garnets llicking in it, defcribed in the article Gariet, where an account will be found of the fpecies of matrix that contains them all. Schorls are likewife found in the mountains and mines of Nifelga, Krafnavolok, and Sondala, as likewife between the Onega Lake and White Sea. Black fehorl is likewife found near the White Sea, and in the Al:ai, Ural, and Daurian mountains.

Nonc of the tramfarent fchorls have been found in Scotland as far as we have heard; but many varteties of the opake kinds have been found in various places, particularly in the inand of Arran, where there is a bed of greenilh horn like fchorl of immenfe extent near the harbour of Limlath.

Fine fpecimens of fchorl are dear ; the ruby fchorl from Siberia, 25 to 50 subles a ring fone; the green, when fine, from 15 th 30 . The high price of the ruby fchorl is owing to its novelty and ranity; and of the green, is owng to its pafling for an emerald. The fpecific gravity of fchorl is 3,6 .

SCHOTIA, in botany: A genus of the munogynia order, belonging to the decandria clafs of plant: ; and in the natural method ranking under the 33 d order, Lomentacea The calyx is femiquinquefid; the corolla has five petals, whin are equal ; the tube is turbinated, carn us, and perfiftent. The legumen pedicellated, and contains two leed, there is only one lpecies, viz. the fpecida, or Alican Lignum v'te.

SCHREBERA, in butany: A genus of the digsnid orber, bionging to the peatandria clafs of plants; and in thee natural method ranking with thofe of which the order is doubtiul The calyx is quinqueparite ; the corolld funnel thaped, with the flaments in the throat, and having eich at icale at the bafe.

SCHREVELIU's (Cornelius), a laborisus Du:c's critic and writer, whohos given the puilic fome editions of the ancient aathor, more cle ant than corre? : lus Greek Lexicon is eiteemed the bett of all his works. He died in 1667.

SCHULTENS (Albert), profeflor of Hebrew and of the editern langudges at 1 .evden, and one of the moft learned mei of the isth centiry, was born at Gromingen, where he fludied till the year r-06, and from thence continued his livdies at Leyden and \(U-\) trechit, Soliultens at len!oth applied himfelit to the fendy of Arabic bouks, both printed and in manufcript; in which he made great progref. A fhont tume ator he became miniter of Whalienar, and two jcars after protellor of the eatern tongues at Eran-hur. At length he ras invited to Leyden, where he taaght Hebrew and the eallern langusges wi h extraurdinary reputation till his death, which hapiened in 1750. He virote many learned works the piacipal of which
schurnan are, 1. A Commen'ary on Job, 2 vols 4to. 2. A Commentary on the Proverbs. 3. Vetus Eg regia via Hebrazandi. 4. Animaduerfiones philologita és criticie ad euria loca Vetris Tiflamenti. 6. An excellent Hebrew grammar, \&cc. Schultens difeovered in all his werks found criticifm and much learning. He maintained againf Goulfet and Drieffen, thit in order to have a perieat knowledge of Hebrew, it its necelliary to join with it, not only the Chaldee and Syriac, but more particularly the Ar.bbic.
SCHURMAN (Anna Maria), a moft extraordinary German lady. Her natural genius difcovered itielf at fix years of age, when fhe cut all fonts of figures in paper with her foillars without a pattern. At eight, the leamed, in a few dajs, to draw flowers in a very agreeable manrer. At ten, fhe took but three hours to learn embroidery. Afterwards the was taught mufic, vocal and intrumental; painting, feulpture, and engraving; in all of which the fucceeded almirally. She excelled in minatu: - painting, and in cutting portraits upon glafs with a diamond. Hebrew, Greek, and Latin, were fo familiar to her, that the moft learned men were atonifhed at it. She fpoke French, Italian, and Engl:fh, Huently. Her hand-writing, in almoft all languages, was fo inimitable, that the curious preferved fpecimens of it in their cabinets. But all this extent of learning and uncommon penetration could not protect her from falling into the errors of Labadie, the famous French enthufiut, who had boen banilhed France for his extravagant tenets and conduat. 'To this man the entirely atached herf:If, and accompanied him wherever he went; and even attended him in his lat illnefs at Altena in Holflein. Her works, contifting of De vita lumane termino, and Difertatio de ingenii muliclris ad cibarinam ot aneliotes literas aptitudine, and her Letters to hes learned correffondents, were printed at Leyden in 1648 ; but enlarged in the edition of Utrecht, 1662 , in 12 mo , under the following title: A. M. Scharman Opnfinla HeLrea, Greca, Lutima, Gallica, Profuica, et Metrica. She publifhed likewife at Altena, in Latin, A Defence of her attachment to Labadie, while fle was with him in \({ }^{1} 673\); not worth reading. She was born at Cologne in 1607 , but refided chiefly in Holland, and died in Frieflnd in i 678 .

SCHALBEA, in botany: A genus of the angiofpermia order, belonging to the didynamia clafs of plants. The calyx is quadifide, with a fuperior lobe; the lowermoft longeft, and emarginared.

SCHVARTS (Chiftopher), an eminent hiforypa nter, born at lncolftadt in 1550 , who was dillinguithei by the anpelhation of the German Raphael. He learned the fiol principles of the art in his own country, but finithed his ftudies dt Venice; when be not unly made the works of Titian his models, hut had the adrantage of receiving tome perfonal inftruction, from that illutrinns mater. His performances were fown in the higheft eftem; as his manner of painting was very different from what the Geimans had bicen accuftomed to before that time: he wa:, therefre, invited by the elector of lidvaria to his court, and appointed his principal painter. He died in 1594 ; and his molt capital works, as well in frefen as in oil, are in the palace at Munich, and in the churehes and convents.

SCHWARTENBURG, a town and cafte of Ger- Schwartermany, and circle of Upper Saxony, in the landgravate of Thuringia, and capital of a county of the fame mane belonging to a prince of the houfe of Saxony. It is feated on the river Schwartz, 20 miles fouth-eaft of Erford, and 35 north of Cullembach. E. Long. 11. 27. N. Lat. 50. 45.

SCHWARTZEMBERG, a town of Germany, in the circle of Iranconia, and capital of a pincipality of the fame name. The cafte is leated ou the river Lec, 5 miles north weft of Nuremberg, and 20 eaf of Wertz. burg, fulbject to its own prince. E. Long. 10. 27. N. Lat. 49. 43 .

SCHWEIDNITZ, a frong town of Germany, in Silefia, and capital of a province of the fame name, with it cafle. It is the handfumeft town of Silefia, next to Breflaw. The Arects are large, the church fire, and the houfes well built. Tha fortifications are not very confiderable, and the royal palace is turned inte a coavent. All the magiftrates are Roman Cathclies; but moft of the inhabitants are Proteftants, who have a church wihout the town, as alfo a public fetiool and bells. It is feated on an cminence on the river WeiAtritz, 27 miles fouth-eatt of Lignitz, and 22 fouthweft of Breflaw. E. Long. i6. 48. N. Lat. 50"̈ 46.

SCHWEINFITRT, a very flrong, free, and imperial town of Germany, in Franconia, with a magnificent palace, where the fenators meet, who are iz in number. The environs are rich in cattle, corn, and wine; the inhabitants are Prcteltants, and not very rich. Howeser, they carry on a large trade in woollen and linen cloth, goofe-quills, and fearhers. It is feated on the fiver Main, 27 miles north-ealf of Wintzburg, and 22 welt of Bamberg. E. Long. 10. 25 . N. Lat. 50.4.

SCHWENIKFELDERS, a dennmination or Chriftians, fo called after Cafper Schwerikfell ven Ofing, a noted nobleman, in the fixteenth century. He was born 1490, in the Pricipality of Liegnitz in Silefia. He thudied ieveral years at Cologn and other univerfities, after this he was in fervice by the duke of Munferberg, and Brieg, until he was difabled by bodily infiumities from attending the bufinefs of that court. He then applied himfelf to divinity; about this time the reformation was begun in Germany, which attragted his whole attention. The chief reformers, Luther, Melanchton, \&c. he held in high efteem, but was decided in his opinion, that they ftill retained feveral relich of popery in their dotrine.

He differed from Luther about the eucharift, in which he could not agree with him, that the budy and blood of Chrift were materially prefent in the Lord's fupper, whether in bread or wine: The words of Chrift, Matt. xxvi. verfe 26 , and 28 , "This is my body: this is my blood," he tonk in this fenfe: That as bread and whe are a fubftantial nourifhment of our bodies in this natualal life, fo were likeuife the body and blood of ou" Saviour, a fubenantial nourifhment to the fouls of the faithful in the new fpiritual life received from above. The objeit of this fupper among Chriftians, thould be the remembrance of their Savinur's unbounded love, and to fhow his death. Schwenkfeld wrote 12 Queftions to Luther, concerning the impanation of the bodvot Clurit, whith he anfwered in his ufual rough Ayle, telling him that he fhould not irritate the cherch
S.hwerke of Chrin, that the blood of thofe he fhould feduce, Selders. would fall upon hi, head. Notwith?anding this, hic fill expofulated with l.uther, and delireal a candid examiration of his arguments, which fo irritated Lather, that he wrote a very indecent mulediftuly letter to Schwenkfell.
He wrotc about go treatifes and pamplilets in Gernan and Liatin, on religious fubjects, moll of which were printel, and are yet extant, though whole editions were conificated and deltroycd; he hall an extenfive correfpondence all over the empire, with perfons of every rank and deffription. The molk material of his Letters were printed, whereof three large iolio volumes are yet left: in lis witings he difplayed a penetrating judgement, wilh a true čhriftian moderation. He ntten declared in his writings, that it was by no means his ob. ject to form a icp.rraic church, expreffing an ardent defire to be ferviceabls to all Chriftians of whatcver dcnomination; but his freedom in giving admonition to thote whom he thonght crroneous, brousht on him the implacatle enmity of Proteflants and Papifts: His writings were forbid to be printed; fich as were printed, were often conficicated and deftroyed; and his perfon was in danger from lis petfecutors. He died in the city of Ulm 1562 , in the \(72 \mathrm{~d} y\) car of his age ; his liarning and exemplary piety is gencrally acknowleged, even by his bittereft antagomiits ( 1 ).
After his death, there were lumblers of people in dififerent parts of Germany, who thought thenfelves convinced that his doatrine was right and orthodox; they were generally called Schwenkielders, and were everswhere reproached and perfecuted at the inftigation of the eftablithed clergy: Thac greatelt numbers of them were in Silefia, particularly in the principalities of Leignitz and Jawr. The eftablifhed clergy there being Lutherans, ufed every intrigue to opprets them; in particular if they affembled for relig:ous worthip, they werc thrown into prilons and dungeons, where many of them perilhed.
Such was ofien their fate, until in 519 the Jefiuits thought the converfion of the Schwenkfelders an objest worth their attention. They fent mifionaries to Si lefia, who preached to that pecple the taith of the emperor ; they produced imperial edicts that all parents thould attend the public worthip of the millionaries, and bring their childden to be inftructed in the holy cathotic faith, under fevcre penalties. The Scliwenkfelders fent deputies to Vienna, to folicit for toleration and indulgence, and though the empcror apparently reeieived them with kindnets and condercenfion, yet the Jefuits has the addrefs to procure another imperial ediat, orjering that ficch parcnts as would not briag ceery one of thecir chilluran to the mifiionaries for inllruaton, flould at lall be clained to the wheel.barrow, and put to hard labour on the public work; and their chilliten fhould by force be brought to the \(m\) nalleries. Upon this, many tamilies fid in the night into Lufatia and other parts of Sixony, leaving behind th:m their effect, real and perfonal, (the roads being beret in the day time by guards to fop all enigrants) ; of thefe in 173 t , a imall number emigrated over Altona and Holland into Pern-
fylvania, where they futtled and fumed themfelves in:o
al religious fociety.
The laft mentioned edich was not pue in its fulleft rizour by the milfionaries, till after the death of Clarles Vi. when another edict was publifhed, which threatened the cotal externination of the remaining Sclwwenkfelders, fronn which they were unexpeciedily relieved by the king of Pruffia mahing a conquen of all siletia, who immediately publifled an ediet in which he recalled all thofe Schwenkididers that werc emigrated, and promifed them thsir cfates, with toleration and protection mot only in Silctia, but in all other part-
of his dominions.
SCHWENKFELDIA, in botany : A genus of the monogynia order, belonging to the pentandria clais of Flants; and in the natural mechod ranking with thore that are doubrful. The calyx is quinquefid; the coroilh funnel-fhaped; the figma parted igto five ; the berry quinquclocular, with a number of feeds. Of this there are three fpecies, viz. I. Cinerea, 2, Afpera; 3. Hirta. The two firlt are na:ives of Guiana, the other of Jamaica. The leaves of all of thcm are remarkably rough, and fick to the fingers or clothes.
SCHWENKIA, in botany : A genus of the monogynia order, belonging to the diandria clafs of plarts. The corolld is almolt equal, plaited at the throat, and glandulons ; there are eliree barren famina ; the capfule bilocular and poly fpermons.
SCHWINBURG, a town of Denmark, on th: eaftern coalt of the inland of Fionia, over-againtt the illands of Arroa and Langeland. E. Long. 10. 55 . N. Lat. 55. 8.

SCHIIITZ, or Swirz, a canton of Swifierland, which gives name to them all. It is bounded on the weft by the lake of the four cantons, on the fouth by the canton of Uri, on the eaf by that of Glaris, and on the north by thofe of Zurich and Zug. Its principal riches conlift in cattle, and the capital town is of the fame name. This is a large, handfome place, feated near the lake of the four cantons, in a pleafint country among the mountains. E. Long. ?. +1. N. Lat. 47. 2.

SCIACCA, anciently called Therme Selinuntia, in Sicily, derives its prefent denonination from the AraLic word Scleich. It is a very ancient place, leing mentioned in the account of the wars between the Grceks and Carthaginians, to the latter of whom it belonged. It is defended by ancient walls and the cafle of Luna. It ftands up in a very fleep rock, h.nnging over the fea, and exc.uvated in cyery direainn into prodigious magazines, where the corn of the ncighbeuring territory is depofited fur expertation; chare is no harbour, but a fm. il bay firmed by a wnoden pier, where lighters lie to load the corn which they carry out about a mile to flips at anchor.

The town is irregulanly but fultantially built, and contains 13,000 inhabitants, though Amico's Lexicen Topegrapbicum fays the laft enumeration found only \(9+{ }^{8}+\) His accounts do not take in ecclefiaftics, and feveral denominations of lay perfons.
SCIANA, in ichthyoligy, a genus belonging to the order of thoracici. The menbrane of the gills

\footnotetext{
(1) The abcye particulars, wihh many others, can alfo be found in G. Arnoldus, M. Salig, and other impartial hiforians, an! are produced from authertic documents.
}
stiaztica. has fix rays; the opercula and whole head are fealy. There are five fpecies.
SCIATICA, the hip-gout. See Medicine, \(n^{\circ} 207\).
SCIENCE, in philofophy, denotes any doctrimes deduced from felf-evident principles.
sciences may be properly divided as follows, 1 . The knowledge of things, their conftitutions, properties, and operations: this, in a little more enlarged fenfe of the word, may be called quoixn, or matural philofphy; the end of which is ipeculative truth. See Prilo:ophy and Physics.-2. The fikll of rightly applying thefe powers, xpaxtixn: The moft contiderable under this head is cthics, whieh is the feeking out thofe zules and meafures of hmman aftions that lead to happinefs, and the means to prastice them (fee Moral Phasosophy) ; and the next is mechanics, or the application of the powers of natural agents to the ufes of life (fee Mechanicz).-3. The dontine of figns, оnयни \(\omega=\frac{\varepsilon x}{}\); the moft ufual of which being words, it is aptly enough termed logi. See Locic.

This, fays Mr Locke, feems to be the moft general, as well as natural, divifion of the nbjects of our uncieritanding. For a mani can employ his thoughts about no:hing but either the contenplation of things themfelves for the difovery of truth; or about the things in his own power, which are his aftome, for the attainment of his own ends; or the ligns the mind makes ule of both in the one and the other, and the right ordering of them for its clearer information. All which three, riz. things as they are in themfelves knowable, actions as they depend on us in order to happinefs, and the right ufe of fig as in order to knowlodge, being toto calo different, they feem to be the three great provinces of the intelleetuil world, wholly feparate and diflinct one from another.

SCILLA, the squill, in botany: A genus of the monogynia order, belonging to the hex.mndria clafs of plants; and in the natural method ranking under the 1oth order, Coronaric. The corolla is hexapetalous and desiduons; the filament, filiferm.

The molt remarkuble 〔pecies is the maritima, or feaoninn, wh fe rooss are ufed in medicine. Oi this there are :wo forts, one with a red, and the other with a white roct; which are fuppofed to be accidental varietie, but the white are generally preferred fir melicinal wfe. Thie ro ts are large, fowhat ov. 11 haped, cons pofed of many coats lying nver eich other like mions; and at the bottom onme nut feveral fibes. From the middl: of the root arife feveral thining leaves, which r. ntinne green all the winter, and decay in the fpring. Thein the flower-ltali comes out, wi jh ries two feet hish, and is maked holf way, terninating in a pyramidal thyrfe of flowers, which :re white, compofed of fix petals, which ipread open like the points of a ftar. 'llis grow; maturnlly on the fer-thores, and in the ditches, where the falt water natur ally flows woth the tide, in molt of the warm parts of Europe, to cannot be propagated in gardens; the frolt in winter alwass dellroying the ronts, and for wat of falt-water they dinne thive in fummer. Sometimes the ronts which are bought for wre put forth their ftems an:! produce thower, as they lie in the drugreils thop.-This root is very hatue ust the inte, intenity litter, and fo acrim nious, that it ulectates the fkini much hambled. Traken internally, it powerfully fimulates the folids, and
promotes urine, fweat, and expectoration. If the dofe is confiderable, it proves emetic, and fometimes purgative. The principal ufe of this medicine is where the primx vix abound with mucous matter, and the lungs are oppreffed by tenacious phlegm. It has been recommended in hydropic cafes, taken in powder, from four to ten grains in a dofe, mixed with a double quantity of nitre. The moft commodious mode of exhibiting this root is as a blus or pill. Liquid forms are too difagreeable to molt people; though this may be remedied in fome degree by the addition of fome aromatic diftilled waters. It yields the whole of its virtues to aqueous and vinous mentrua, and likewife to vegetable acids.
sCilly, or Silley, a clutter of fmall iflinds and rocks, fituated in the Atlanti= Ocean, in W. Long. \(7^{\circ}\). N. Lat. \(50^{\circ}\)

There illands were firft called Cafiteridis, or the Tin Ifes, from their being rich in that metal. The common opinion is, that this is a Greek appellation; which in the noft obvious tenfe is true: But as the Phor icians were familiar with the metal, and with the comn.ry that produced ir, before the Grecks knew any thang of cither, it is very likely they introduced the names of bohn from their own language. Strabo fays theie illands were ten in number, lying clofe together, of which only one was uninhabied: the people led an erratic hie, lived upon the produce of their cattie, wore an under-garmeut which reached down to ther ankles, and uver that another, both of the fame colour, which was blick, gire round a little below the brealt with agralle, and walked with flaves in their lands. The nache, of their inlands were tin and lead, which, with the fims of their cattle, they exchanged, with foreign merciants, that is, the Pacenicians from Cadiz, tur eation-ware, falt, and utenfils made of brafs. An author of as great or greater antiquity, feems to include a part at leaft of Cornwall amungta thefe iflund; or rather he fuggetts, that they were not perfect inands except at full fea, but that at ebb the inhavitants paffed from one 10 another upon the fands, and that they even traniport d their tin in large fquare blucks upon carriages from one ifland to another. He farther takes notice, that fuch as imbabited abont Belerium (the Lind's End) were in their converfation with lirangers remarkably civil and churteous. Other ancient waters Hyle thefe inands Hefperides, from their weitern dituation, an. Oeftrymides, aflerting that t.ee land was extemely fertile, as well as full of mines; and that the people, though very bave, were entirdy addicted to commerce, and boldly paffed the feas in there led her boars.

The Romans were exceedingly defirous of having a Thare in thas commerce, which the Paconicians as carefully labured to prevent, by concealiag tweir navigatoun w theie illands as much as it was in thicir power. At leurroh, however, the Romans prevailed; and Publins Craffis commg thither, wat fo well plenfed with the indutry and manners of the people, that he taught them varion, improveraents, as well in working their mine, which till that time were but fhallow, as in curyog their own merchav dife to dillerent markets. There is no roum to doubt that they foilnwed the tate of the reft of Britain, and particularly of Comwn', in becoming fubjert to the Romala enpire. We ind them called in the Itinerary of Antoninus, Sisfles: by

Sulpitius,

Sulpitius, Silicna: and ly Solinus they are termed Silurcs. All we know of then during this period is, that their tin trade continned, and that inmetimes fateprifoners, were cxiled, or, to ufe the Reman phrafe, relegated hither as well as to other illaands.

When the legions were withdrawn, and Britain with its dependecties lift in the power of the natives, there is no reat in to quellion that thete illands fhaied the fame lot with the reft. As to the appellation which from this period prevailed, the cordinary saly of writing it is Silj; ; in econds we commen'y fuld it iperit Sil's, Silley, or Suliey; but we are told the old byitilh appelation was Sullib, or Syllh, which fignifies recks confeerated to the fun. We have n the leaft notice of any thing that regards ihem from the fifin to the eenth century. It is, wowever, with match apfearance of tru h e ajectured, t...at for e etime within this fance they were in a great mos inre deftroyed by an earthquake, attended with a fiaking of the eath, by winch moft of theic lowla ds, :t i if compe the greatelt part of their improvements, were cosered by the fea, and thofe rich mines of tin which had rendered them fo fumas fxaliowed up in the decp. They have a tradtion in Cornwall, that a ve:y extenfien tract of c untry called the Lionifs, in the old Cornith \(L\) thsufore, fuppoied to lie betwen that country and Scilly, was loft in that manrer ; and there are many concurent circum? tat:ces which render this proras!e. In reference to thele if ind, the cafe is tull
 vithle from almon all the ifles, and thereby aford an ocnior damontration that they were fermerly of lar Fever exient, and that in remoter ages their intabiitnts mula have heen wery numer w, and at the fame time very induftrinus. "This fufficienty proves the fact, that by fuch an catthguake they were deftroyed; and that it hapened at fome period of time within thofe limits that have been affigned, appears from our hearing nothing more of their tin trade, and from one havirg, no notice of it at all in any of our ancient chrenicles, which, if it had fallen out later, from their known attention to extracrd wary events, muft certainly have happered.

It is generally fruppofed, and with great appearance of truth, that king A thelftan, aiter having overcome a wery powerful contederacy formed againt him, and having reduced Exerer, and driven the Britons beyond the river Tamar, which he made the boundary of their Cornith d minions, paffed over into thefe iflands, (then furciy in a better fatc than \(n, w\), or they would not have been chjects of his vengearce), and reduced them likewife. Hitory dies not inform us, that the Danes ever fixed themfelves in thefe iflands; but as their method of fortifying 's very well known, it has been ennjectured that the Giant's Callle in the ifle of S: Mary was erected by them; and indeed, if we confider the convenient fituation of thefe illands, and the trade of piracy which that partion carried on, thene feems to be nothing improbable in that ennjecture. It is more cest, in t! at there were churches crected in thefe ifles, and that there were in them alio many monks and hermits, befere the conqueft.

The ferility of the iflands is mall infifed upon in all the accounts; ard it is expretsly faid of St Mary's that it -aars exceeding grod corn, infomuch that if men did but calk econ where foine had roosed, it
would come up. There is mention made of a breed of wild fwine, and the inlabitarits had great plenty of fowl and fifh. But notwithtarding the fertiliey of the country, and the many commodities that men had or might have there, it was neverthelet's but thinly peopled; and the reafon alligned is, becanfe they were liable to be frequuently fpuiled by French or Spanifa pirates. In Leland's time, one Mr Davers of Wiithire, and Mr Whittington of Glouce Atcrlaire, were froprie. inrs of Scilly, and drew from thence, in rents and commodities, about to merks a-jear.

The inhalitants at that juncture, and long before, appear to lave carricd on a dmall trade in dricd fkate and oiliet fith to Bictiagne, with which they purchafed Salt, carvas, and cther neceffaries. This feems to be the remains of a very old kind of commerce, fince, for inny aces, the jcople of that country, thofe of the Scilly ifles, and the people of Cornvall, looked upon themitwe, as comatrymen, being in truth no other than iemuants of the ancient Britons, who, when driven out hy th.e Sixons, took refuge in thofe inands, and in that part of France which had before been called Armoria, and trum hence Ayled Bretague, Brittany, or Lititle Britain, and the people Bretcns. This, in all probability, ir is a great relict to thofe who dwelt in thofe inles; who, during the long civil war b.tween the houfes of lork and La:ucafter, had their intercourfe with Englaad fo much intersupted, that it it had not heen for this enmmerce with their reighbours on the French coant, hisy might have been driven to the lan diftrels.

The Scilly, or Slles iflands, lie due weth from the Lizard abont 17 leagues; weit and by fouth from the old Land's End, next Mount's Bay, at the difance (f io leagucs; and from the weftern Land's End, they lie wefthuth weft, at the diftance of fomething mone than nine leagues. There are five of them in habited: and that called Samplon has one family in it. The largeft of thefe is St Mary"e, which lies in the north latitude of 49 degrees 55 minutes, and in the longitude of 6 degrees 40 minutes weff from Greenwich. It is wo mi'ss and a half in length, about one and a hall in beadth, and between nine and ten miles in compafs. On the weff fide there rrojects an ithmus. Beyond this there is a peninfula, which is very high; and upon which Ilands Star Cafle, built in 1593, with fome outworks and batteries. On thefe there are l:pwards of threefenre pieces of cannon motinted; and for the defence of which there is a gatrilion of an entire company, with a mafler-gumer and fix other gunners. In the magazine there are arms for 300 inlanders, who, when fummoned, are bound to march into the fortels. Tinderncath the cafle barracks and lires fands Hugh Town, very improreriy built, as lying fo low as to be fubjeft in inundations. A mile within land fands Church Town, fo denominated Irom their place of worthip: it confifts of a few houfes nnly, with a contrehoufe. About two furlongs eand of this lies the Old Tonnt, where there are more houfe; and fome of them very convenient dwellings. Tre number of inhabitants in this inand is about 600 or 7 CO ; and it produces to the lord prnpriesor 3001 . per arinum.

Trefuen lies directly noth from St Mary's, at the d : fance of two miles. It was formerly Atyed St i \(\boldsymbol{N} \boldsymbol{i} \%\) ohen's ifland; and was at leaft as large ac St Mary's, it thongh at prefent about half the fize. The remairs
of the abbey are yet vifible, the fituation well chofen, with a fine bafon of freth water before it, half a mile long and a furloug wide, with an ever.green bank high enough to kcep out the fca, and ferving at once to preferve the piond, and fhelter the albey In this pond there are moft excellent eels, and the lands lying round it are by far the bell in thofe inlands. There are about half a fcore fone houfes, with a church, which ane called Dolppin Town; an old caltle built in the reign of Henry VIII. called Oliver's Caftle; and a new block-houle, raifed out of the ruins of that caftle, which is of far greater ufe. This inland is particularly noted for producing plenty of the fineft famphire, and the only tin works that are now vifible are found here. There are upon it at prefent about 40 families, who are very induftrious, and fpin more wool than in St Mary's. Its annual value is computed at 801 . a year.

A mile to the caft of Trefcaw, and about two miles from the molt nothern part of St Mary's, lies the ine of St Martin's, not much inferior in fize to that of Trefcaw. It very plainly appears to have been formerly extremely well cultivated; notwithltanding which it was entirely deferted, till within fomewhat leis than a century ago, that Mr Thomas Ekines, a confiderable merchant, engaged fome people to fettle therc. He like wile caufed to be erected a hollow tower twenty feet in height, with a pipe of as many feet more; which being neatly covered with lime, ferves as a daymark for directing fhips crofing the channel or coming into Scilly. St Martin's produces fome corn, affords the belt paftare in thefe inands, nourifhes a great number of heep, and has upon it 17 families, who pretend to have the fecret of burning the beft kelp, and are extremely attached to their own inland. As a procf of this, it is obfervable, that though fome of the inhabitants rent lands in St Mary's, yet they continue to refide here going thither only occafinaliy.

St Agnes, which is alro called the Light-t-houfe Ifand, lies near three miles fouth-weft of St Mary's; and is, though a very little, a very well cultivated ifland, fruitful in corn and grafs. The only inconvenience to which the people who live in it are fubjeet, is the want of g od water, as their capital advantage contitts in having feveral grod coves or fmall ports, where brats may lie with fafety; which, however, are not much ufed. The lighthoufe is the principal ornament and great fupport of the inand, which ftands on the moft elevated ground, built with tone from the foundation to the Ianthorn, which is fifty one feet high, the gallery four, the farh lights cleven feet and a half high, three feet two inches wide, and fixteen in number. The floor of the lanthorn is of bick, upon which tands a fubtantial iron grate, foutre, barred on every fude, with one great chimney in the canopy-ronf, and feveral leffer ones, to let out the fmoke, and a large pair of finith's bellows are fo fixed as to be eafily ufed whenever there is occafion. Upon the whole, it is a noble and commodious frustuic; and toing plaftered white, is a nfeful daymark to all hinips soming from the fuuthward. The keeper of the light-houfe has a filary fiom the Trinityhoufe at Depotird of 401 . a year, with a dwellinghoufe and ground for a ga den. II samitant has 201 . a-year. It is fupplied with coals by an annual flap; and the caringe of thefe coal. fiom the feal fide to the light-houle is locked on as a a nliderable benefit to the poor inhabitants. 'They have a neat little church, built
by the Godolphin family. There are at prefent 50 houteholds in the inland, which yield the proprietor to 1. a-y ear.

Brebar, or, as pronounced, Bryer ifland, lies northweit of St Mary's, and to the welt of Trefcaw, to which, when the fea is very low, they fometimes pafs over the fand. It is very mountainous, abounds with , fea and land fowls, excellent tamphire, and a great varicty of medical herbs. There are at prefent thirteen families, who have a pretty church, and pay 301. a.jear to the proprietur.

South from hence, and weft from Trefcaw, fands the itland of Sampon, in which there is not above one family, who fubfut chisfly by the making of kelp. To the weltward of thefe there lie four inlands, which contain in the whole 360 acres of medow and arable land. The eafiern ijlls, fo denominated from their pofition in refpeet tu St Mary's, contain 123 acres; and there are alfo foven other rocky and icattered itlands, that have each a little land of fome ufe; and befides thete, innumerable rochs on every fide, among which we mulf reckun Scilly, now nothing more than a large, ill-thaped, craggy, inaccetfible ifland, lying the farthett north-weft of any of them, and confcquently the seareft to the continent.

The air of thefe illands is equally mild and pure; their winters are feldum fubject to froft or fnow. When the former happens, it latts not long; and the latter never lies upon the ground. The heat of their fummers is much abated by lea-breezes. They are indeed frequently incommoded by fea fogs, but thefe are not unwholefome. Agues are rare, and fevers more fo. The molt fatal diftemper is the fmall-pox; yet thofe who live temperately furvive commonly to 2 great age and are remarkably free from difeafes

We mult now pafs to the fea, which is of more confequence to thefe Ifles than that fmall portion of land which is diftributed amongft them. St Mary's harbour is very fafe and capacious, having that inand on the fouth ; the eaftern ill.nds, with that of St Martin, on the eaft ; Treicaw, Brehar, and Samion, to the north; St Agues and feveral fmall inands to the weft. Ships ride here in three to five fathom water, with good anchorage Into this harbrur there are four inlets, viz. Broad Sound, Smith's S-und, St Mary's Sound, and Crow Sound: fo that hardly any wind can blow with which a thip of 150 t ?:1s cammot fafely fail through one or other of them, Crow Sound only excep:ed, where they cannot paf, at low water, but at high there is from 16 to 24 feet in this palfage. Befides thele there are two cther larburs; one called Nerw Gryney, which lies between Bichar and Trefcaw, where thips of 300 tons maly ride fecurely. The other is called Ohd Grynfey, and lics betwrea Tretcaw, St Helcn's, and Theon, for finailer flips. The former is guarded by the batterics at O iver's Cafle ; the litter by the Blockh ufe, on the ealtern fince of Trefcaw, called Dover. Small coalters bound to the northward have more convenient outlets fion thefe little harbours than from St Mary's, where, at the weft end of Hugh Town, there is a nine pier buil by the pefent earl of Godolphin, 430 feet lonis, 20 fect wide in the narrowet part, and 23 in height, with 16 reet of water at a fpring, and 10 at a ne p iile; fo that under the fhelter of this picr, veffels of 150 tms may lie fecurely, not only clofe to the quay, but all along the ftrand of the town.
stilly. In this harbour, and in all the little cores of the cveral ifles, prodigions quu.nntities of mackarel may be fcaught in their feafon; alfon foal, turbot, and plaife, remarhably good in their kind; and ling, which from its being a thicker fill, mellower, and better fed, is very jufly preferred to any caught nearer the Britith coafts. Salmon, cod, pollock, are in great plenty, and pilchards in vaft abundance. To thefe we may add the alg, marina. fucus, or ore-weed, which ferves to feed both their imall and great cattle, manures their lands, is burned into kelp, is of ufe in phyfic, is fometimes preferved, fometimes pickled, and is in many other relpeets very beneficial to the inhabitants, of whom we are next to fpeak.

The people of Scilly in general are roburt, handfome, aftive, hardy, induftrious, generous, and gondnatured; fpeak the Englifh language with great propriety; have Atrong natural parts (though for want of a good fchool they have little education), as appears by their dexterity in the feveral employments to which they are bred. They cultivate moft of their lands as well as can be expefted under their prefent circumfances. They are bred from their infancy to the management of their boats, in which they excel; are good fifhermen, and excellent pilots. Their women are admirable houfewives, fpin their own wool, weave it into coarfe clnth, and knit fockings. They have no timber of their own growth, and not much from Ingland; get they have many joiners and cabinet-makers, who, out of the fine woods which they obtain from captains of hips who put in here, make all kinds of domeftic furnicure in a very neat manner. They are free from the land-tax, malt-tax, and excife; and being furnifhed with plenty of liquors from the veffels which are driven into their roads for refrefhment, for neceffiry repairs, or to wait for a fuir wind, in return for provifirns and other conveniences; this, with what little firh they can cure, makes the beft part of their trade, if we except their kelp, which has been a growing manufacture for thefe fourfcore years, and produces at prefent about 500 l. per annum.

As to the civil government, it is adminifered by What is called the Court of Tweive; in which the ermmander in chief, the proprieter's agent, and the chaplain, have their feats in virtue of their offices: the other nine are chifn by the penple. Thefe decide, or rather compromife, all differences; and punith fmall offences by fines, whippings, and the ducking ftonl: as to greater enormities, we may cunclude they have mat been hitherto known; fince, except for the foldiers, there is no prifon in the inands. But in cafe of capital offences, the criminals may be tranfpoted to the county of Comwal, and there brought to jultice.

The great impor'ance of thele illands arifes from their advantaceous fitations, as looking equally iat St Gerrge's Chanmel, which divides Great Britain from Irel.and, and the Englifh Chaunel, which feparates Britain from France. For this reaf n , moft thips bound from the finhihward frive to make the Sally iflands, in order to theer their c urie with greater certanty. It is wery ennvenient alfo- fir velfels in take lielter anmonglt then!; which prevents their thei g driven in Miford Haven, nay fom-tinies into fome p. rt in Jreland, if the wind is itring at e.tid \(m\), if hows hard at northwef, from being forced batk into if me of the Comith harbouts, or eved on the French coats. If the wind
fhould not be very high, yet if unfarourable or uniteady, as betw en the channels offen happens, is is lectier to put into Scilly, than to beat about at fia in bold weather. The intercmurfe betwcen thefe two channcls is anothes motive why flips come in here, as cla ofing rather in wait in fafety for a wind, than to run the hazard of being blown nut of their c urle ; and therefore a ftrong gale at ealt feldom fails of bringing thirty or forty vetrels, and frequently a larger number, into Scilly; nnt more to their uwn fatisfation than to that of the inhabitants. Ships homeward-bound from America cften touch there, from the defire of making the firl land in their power, and for the fake of refrelliment. Thefe reafons have an influence on other flips, as weil as Britifh; and afford the datires an opportunity of thowing their wonderful dexterity in conduating thers fafely into St Mary's harbour, and, when the wind ferves, through their founds. Upon firing a gun and making a watt, a boat immediately puts off from the nearelt illand, with feveral pilots on board; and having with amazing activity dropped one of them into every fhip, till orly two men are left in the boat, thefe return ag: in to land, as the wind and other circumfances die \(e f_{t}\), in one of their little coves.

Refpecting a current which often prevails to the weftward of Scilly, Mr Rennel has publithed fome nbtervations of much importance. "It is a circumftance (iays he) well known to feamen, that fhips, in coming frons the Atlantic, and feering a courfe for the Britilh charnel, in a parallel fomewhat to the fouth of the Scilly iflands, do notwithfanding nften find themielves to the north of thore ifland, ; or, in other words, in the mou:h of St George's or of the Briftol channel. This cxtraordinary error has paffed for the effects either of ba! feerage, bad obfervations of latitude, or the indraught of the Britul chaunel : but none of thefe account for it fatisfaftorily; becaufe, admitting that at times ther: may be an indraught, it cannot be furpofed to exteond to Scilly; and the cafe has happened in weather the mof favourable for navigating and for taking obferv:tions. The confequences of this deviation from the intended traft have very often been fatal ; particularly in the lufs of the Nancy packet in our own times, and it.at of Sir Clnudefley Shovel and others of his flect at th: beginning of the prefent century. Numbers of cafes, equally melancholy, but of lefs celebrity, have occurred; and many others, in which the danger has been iniminent, but not fatal, have feareely reached the public ear. All of thefe have been referred to accident; and therefore no at-empt feems to have been made to invelligute the caufe of them.
"I am, however, of cpinion, that they may be imputed to a fipecific c.ule ; namely, a current: ard I Rall therefore endeawour to mveftigate both that and its oflects, that feamen may be appreced of the times when \(t^{\prime}\) e, are partocularlv thexpert it in any conlideratile degree of Atreng'h ; for rhen only it is 1 kely to cccation milchief, the curren.t that prevail at ordinary time b:ing pubably too weak to prollice an error in the reckoninis, equal to the difference of prallul hetween the iouth part of Scily ard the trat in which a commander, prudent in his meafures, but unfulpicious of a current, would cho fe to fuil."

The osiginat caule of th's current is the prevalence of weferly wirds in the Athatic, whith impel the wisters along the roth cont of Sjuin, and accumulte
them in the Bay of Bifcay; whence they are projested along the coaft of France, in a direction north-weft by welt to the welt of Scilly and Ireland. The major atfigns itrong reafons for the exiftence of this current beween Uihant and Ireland, in a chart of the traats of the HeEtor and Athas, Lult India thips, in :778 and 1787. The following remarks on the effect of this current are abridged from the author's work, which is well worthy the pernfal of all failors and fhipmalters.

1ft, If a flip crolfes it ohliquely, that is, in an eaft by fouth or more foutherly direction, the will continue nuch longer in it, and of courfe be more affected by it, than if the crolfed it more direally. The fame confe. quence will happen it fhe crufles it with light winds. 2 dlf , \(A\) good oblervation of latituje at noon would be thought a fufficient warrant for rumuing caftward during a long night; yet as it may be polible to remain in the current hong enough to be carried from a parathel, which may be deemed a very fafe one, to that of the rocks of Scilly, it would appear pradent, after experiencing a continuance of ftrong welterly winds in the Atlantic, and approaching the Channel with lisht foutherly winds, cither to make Uthant in time of peace, or at all events to keep in the parallel of \(48^{\circ} 45^{\prime}\) at the higheft. 3 dly, Ships bound to the weltward, from the mouth of the Clannel, with the wind in the fouth weit quarter, fhould prefer the larboard tack. \(4^{\text {thily, M }}\), jor Rennel approves the delign of removing the lighthoufe of Scilly (if it be not alieady moved) to the fouth weft part of the high rocks. 5 thly, He recommends the fending a veffel, with time-keepers on board, to examine the foundings between the parallels of Scilly and Uthant ; from the meridian of the Lizard Point as far weft as the moderate depths exterid. A fet of tumekeepers, he obferve, will eff:ct more in one fummer, in fkilful hands, than all the fcience of Dr Halley could do in the courfe of a long life.

In time of war, the importanse of theefe iflands is fill more conipicuous; and it is highly prubable, that they afforded the allies a place for aflemblirg their fleet, when the Britons, Danes, Scots, and Irifh, failed under the command of Anlaff, to attack King AtheiHan; which convinced him of the neceffity of adding them th his dominions. Upon the like principle, Henry VIII. when upon bad terms with his neighbours, canfed an old forirefs to be repaired; and Queen Elirabeth, who had more to fear, direged the contruation of a cafte, which, in patt at leaft, till remains. Dut the moft lingular inftance of the detriment that might arife fions thefe iflands falling into other hands toan 3hi ila haprened in 1651 , when Sir John G:enville took fheiter in them with the remains of the Cornith cava'iers. For the depredations committed by his frigates foon made it evident that Scilly was the key of the Englith conmerce; and the clamours of the merchants therupun rofe fo high, that the parliament were torced to fend a fleet of filiy fail, with a great body of land-forces on board, under Sir Ceorge Ayfue and admir.ll Blake, who with great difficulty, and no inconfiderable lof, made themelves mathers of Trefonw and Brebar; where they exected thofe lines and fortifications near the remanins of the old fortrefs that are called Oliver's Cafle. But at length, finding that little was to be done in that way, they chofe to grant Sir John Grenville a moll hemurable capitulation, as the fureft means to recover places of fuch con-
fequence: with which the parliament were very little fatisfied, till Mr Blake gave them his reafons; which apreared to be fo well iounded, that they directed the articles he had concluded to be punctually carried into execution.

SCIO, or chio, a celebrated illand of the Archipelago (fee Choo.) It is 32 miles long and 15 broad, is a mountainous but very plealiant country. The prin cipal mountain, cathed anciently Peinceus, prefents to view a long lofty tange of bare rock, reflecting the fun; but the recelfes at its feet are diligently culcivated, and reward the hufbandman by their nich produce. The flopes are clotled with vines. The gr ves of lemon, orange, and citron-trees, regularly planted, at once perlume the air wath the oduur of then blolloms, and delight the eye with their golden fruit. Niyrtes and jatnimes are iateriperfed, with olive and palm trees, and cypr-fies. Amid thofe the tall minarees rile, and white houfes glitter, dazz'ing the beholier. The inhabitants export a latge quantity of plealant wine to the neighbouring indads, but their principal trade is in tilks. They have alfo a mall commerce in wonl, cheele, figs, and maltic. 'The women are better bred than in other parts of the Levant ; and though the drefs is odd, yet it is very ne it. The partridyes are tume, being fent every day into the fields to get their limng, and in the evening are called back with a whittle. The town called Scio is large, pleatant, and the belt built of any in the Levant, the houfes being hautiful and commodious, fome of which are terraifed, and others covered wi-h tiles. The Atreets are paved with Hint flones; and the Vene:ians, whate they had it in their poliellion, made a great many alterations for the better. 'The catle is an old citadel built by the Genuefe, in which the Turks have a gernifon of \(1+00 \mathrm{men}\). The harbour of Scio is the rendezvons of all fuipping that gees to or comes fr m Conttantinople, and will hold a Heet of fourlcore veffels. They reckon there are 10,000 Turks, 100,000 Greeks, and 10,000 Latins, on this ifland. The Turks took it from the Venctians in 1695 . Scio is a bilhop's fee, and is feated on the fea-fide, 47 miles weft of Smyrna, and 210 futh weft of Conitantinople.

There are but few remains of antiquity in this place. "The moft curious of them (fa; s Dr Chandler) is that which has been named without reafon the School of Ho mer. It is on the coalt at fome dittance from the city rorthward, and appears to have been an open temple of Cybele, formed on the top of a rock. The thape is oval, and in the centre is the image of the goddefs, the head and an arm wanting. She is rejreiented, as utual, fitting. The chair has a lion carved on each fide, and on the back. The area is bunded by a low rim or feat, and abont five yards over. The whole is hewn out of the mountain, is rude, indiftinct, and probably of the moft remote antiquity. From the flope higher up is a fine view of the rich vale of Scin, and of the channel, with its thining iflands, beyond which are the mountains on the matnland of Alia."

SClOPPIUS (Gafpar), a learned German writer of th \(17^{\text {th }}\) century, was born at Neumark in the Upper Patatinate on the 2 yhof Nidy 1576. He fudied at the univerfity with fo much fucects, that at the age of 16 he became an author; and publifhed books, fays Ferrari, which deferved to be admired by old men. His difpofitions did not correfpond with his genins. Natrrally palionate and malevolent, he afiaulted without

\(\underbrace{\text { Scioppius. mercy the charafter of eminent men. He abjured the }}\) fyftem of the Proteftants, and became a Roman catholic about the year 1599; but his character remained the fame. He poffured all thofe qualities which fitted him for making a diftinguifhed figure in the literaty world ; imagination, memory, protound learning, and invincible impudence. He was familiar with the terms of reproach in moft (f the languages. He was entirely ignorant of the manners of the world. He neither thowed relpect to his fuperiors, 1 or did he behave with decency to hs equals. He was poffelfid with a fremzy of an uncommon kind: \(h_{1}\) e was indeed a perteet firebrand, fiettering around him, as if fur his amufement, the moft atrocious calamries. Jofeph Scaliger, above ath others, was the obje? of his fatie. That learned man, having drawn up the hitory of his own fam:ly, and deduced its gencalogy from princes, was feverely attacked by Scoppiu, who sidiculed his high preten. fions. Scaliger in his turn wote a book intitled The Lite and Pureatage of Gafper Scioppius, in which he infurms us, that the father of Scioppius had been licecellively a grave digger, a journey nan flationer, a hawker, a foldier, a miller, and a brewer of beer. We are told that his wite was long kept as a mitrefo, and at length forfaken by a debauched man whon fo: fillowed to Hungary, and obliged to return to her huiband; that then lie treated her harthly, and a nd:mned her to the loweth ofices of fervitude. His dangliter too, it is faid, was as diforderly as her mother: that after the ffight of her hufand, who was going to be burned for fome infamons crime, fhe becane a cummon proftituse; and at length grew fo icandalaus, that the was cummited to prim. Thefe fevere aciuftions againft the fanily of Sc:oppins infaned lim with mare cagernefs to attack his antagonil anew. He collected all the calumnies that had been thrown out aatan? Scaliger, and formed them into a huge volume as if he had intended racrulh hom at once. He trented with great contempt the King of England, Jame. I. in his Ee lefighicus, \&c. and in his Coblriame Regians Britannix Regi graviter ex oculis 1. iboranti murece mijum ; that is, "An Eye-falve for his Britannc Majofly." In nne of lii, wurks he had the atudacity to abule Henty IV. If France in a mof fcurailous manner, on which tecont ! is bnok was borned at Paris. Ile was hang in effigy in a farce which was :eprefertect lefure th: kho fo tinghe but he gloried in h.s hathour. Piovok id th his inmene to their fovereigh, the fervan's of the Enelith arbututarato fialted him it Mati 4 , mad corrected him feverel! ; but he balied of the wounds he had receivel. He pubhund mone han thinty d:famat ay iibels aganat the Jeficits; and, what is sey turprifing, in the vary place
 tiety, he fubtectibes lins fiwn nate wi.h expreffirns if piety. I Cajfer sionfius, alredy on the lrink of the grave, and ready to appear lefore the tribimal if of fus Chrift to give un a co:nt of my wern's. 'Thwards the chad of liis life he employed hatulf in thating the. Ip c.alype, and affirmad hat he hat found the key u that myterious bor \(k\). He fent fone of his erpention to Cardinal Mazarine, bat the cardmal did not find it chisreaient to read then.

Ferrat tell! \(u\), that during the lat? \(\hat{i}\). his life he that himferf up in a fotall afarment, whese he devoted Linfelf folely to fludy: The Same wriat
acquaints us, that he could repent the Scriptures almolt entirely by heart ; but his good qualities were eclipfod by his vices. For his love of nander, and the furious affalts which he made upon the moit eminent men, be w:as called the Cerberus of literature. He accufes even Ciccro of barbarifms and improprietics. He died on the 19th November \(1 G_{79}\), at the age of 74, P Pddoa, the only retreat which remained to him from the multiude of enemies whom he had created. Four hundred baoks are afcribed to him, whech are faid to dificover great grenius and learning. The clicf of thafe are, 1. Ver-jimiliam Líri IV. 1596, in 8 mon 2. Commenturias d arte critica, 1651, in 8vo. 3 De fiea ad Catho. licos migratione, 1660, in 8ro. ㄷ. Notutantes Critice in Phatrum, in Priapria Puturii, 106 t, in Sso. 5 Suj-
 belli facri, 1619, in 4 to. 7. Coillyrium regiam, 1611, in Sv.. 8. Grimmati a Philofoplica, \(16_{4}\), in 8vo. 9. Relatio ad Reges et Principes de Strat-gematilus at Sacietatis Fiflu, \(G_{t 1}\), in 12 n.0. This laft mentioned book wans publithed under the name of Alpbonfo de Vargas. Iic was at lirft well difpored to the Jefuits; but there fathers on one occalion ofpored hima. He prefented it petition to the diet of Ratibonne in \(\mathbf{I G}_{3} \mathrm{O}\), in order to - udin a penfion; but the Jcfuits, who were the confellurs both of the emperor and the electors, had influence to prevent the petition from being granted. From that moment Sciuppius turned his whole artillery againf the Jefuits.

SCIPIO (Publius Cornelius), a renowned Roman general, furnamed Africanus, for his conquefts in that country. His other fignal military exploits were, his taking the city of New Carthage in a fiogle day; his compleie victory over Hannital, the famous Carthaginim general ; the defeat of Syphax king of Numidia, and of Antiochus in Afia. He was as eminent for Lis. chaftity, and his generous behaviour to his prifoners, as for his valour. He died 180 B . C. aged abont 51 .
Seipin (Lucius Bornelius), his brother, fun named Ajaticur, for his complite vifory over Antiochus at the battie of Magnefia, in which Antiocluus lof 50,000 infanty and fooc cavalry. A triuniph, ard the furnume of atiatious, were the rewards of his valour. Yet his ungrateful countryme: accu'ed him, as well as his hrother, of peculation; for whils he was fined: but the public fale of lis efie?s proved the Ealfelhood of the charge; for they did not prinuee the amount of the line. He flurihed about 190 B. C.

Scıpıo (Publius Emilianu ), was the fon of Pulnt Emilius; bat being adopted by Sxipio Atricanus, he was called Scipio Alricinus junior. He thowed himsiti
 Afrcanus, wh male equall ed in military fame and public virtue. His chief i a ries were the conquelt of Carthare and Numantia; Yet thefe firnal fervices to his country could not proter him ir man uitmely fre. He was tirangled in his bed by order of the Decemviri, who oreaded his popularity, 129 B. C. aged 56.

SCiRO, an ifland of the Archipelaro, to the weit of Myti ene, to the northea!t of Nesmpont, and to the lontheent of Sinti. It is 15 milev in \(1 . n g t h\), and s in breadth. It is a mountannus coumtry, tut has no min-s. The vine, nate the beasty of the flathe. and the wine is excellout; ros do the natives wame vivol.

wnod. There is but one village; and that is built on an irregular ragged hole withits bill; but as this artift a rock, which runs up like a fugar loaf, and is 10 miles from the harbour of St George. The inhahitants are all Greeks, the cadi being the only Turk mone them.

SCIROCHO, or Sirocho, a name generally given in [taly to every unfavourable wind. In the fonth weat it is appliced to the hot fuffocating blafts from Africa, and in the north-ealt it means the cold bleak wiods from the Alps.

SCIRPUS, in botany: A genus of the monoggnia erder, belonging to the triandria clafs of plants; and \(i \cdot 1\) the natural method ranking under the 3 d order, Ca lamaric. The glumes are paleaceous, and imbricated all round. There is no corolla; and only one beardlefs feed.

SCrRRHUS, in furgery and medicine, a hard tumor of any part of the bedy, void of pain, arifing, :ts is fuppofed, from the infpiflation and induration of the Huids contained in a gland, though it may alfo appear in any other part of the body, efpecially in the fat: being one of the ways in which an inflammation terminates. Thefe tumors are exceedingly apt to degenerate into cancers.

\section*{SCITAMINEK. See Botany, p. 459 .}

SこIURUS, the sQuirrel; a genus of quadrupeds belonging to the order of glires. It has two fore-teeth in each jaw, the fuperior ones thaped like wedges, and the inferior ones compreffed. There are 1: fpecies of which the molt remarkable are,
1. The vulgaris, or common fquirrel, with ears terminated with long tufts of hair; large, lively, black eses; head, body, legs, and tail, of a bright reddith brown; brealt and belly white; hair on each fide the t.til lies flat. In Sureden and Lapland, it changes in winter into grey. In Rufla it is fometimes found black. In many parts of England there is a beautiful variety; with milk white tails.-This fpecies inhabits Europe and North America, the northern and the temperate parts of Afia: and a variety is even found as far fouth is the ifle of Ceylon. It is a neat, lively, active animal ; lives always in woods: in the fpring, the female is feen purfied from tree to tree by the males, feigning an elcape from their embraces; makes its nelt of mofs and dried leaves between the fork of two branches; brings three or four young at a time; has two holes to its neft ; ftops up that on the ?ide the wind blows, as Pliuy juftly remarks; lays in a hoard of winter provifion, fuch as nuts, acoms, \&c.; in fummer, feeds on buds and young thoots; is particularly fond of thofe of fir, and the young cones; fits up to eat, and ufes its forefeet as hands; covers itfelf with its tail ; leaps to a furpriling difance; when difpofed to crofs a river, a piece of bark is its boat, its tail the fail; is in great plenty in Dunmallet, and there called Conn. Boys frequently nurfe this beauciful and active animal under cats. "There are three creatures, the fquirrel, the field. moufe, and the bird called the muthatch, which live much on hazel ruts; and yet they open them each in a different way. The inft, after rafping off the [mall cind, iplits the thell in two with his long fore-teeth, as :2 ban does with his knite ; the fecond nibbles a hole with his teeth, for regular as if drilled with a wimble, atid yet fo fmall, that one would wonder how the keracl sum be extraf. 1 throught it while the latt pecks
has no, aw's to hold the nut fi.m while he pierces it, like an adroit workman, he fixes it, as it were, in a vice, in fome cleft of a tree, or in fome crevice; when, ftanding over it, he perforates the fubborn fhell. While at work, they make a rapping noie, that may be heard at a conliderable diftance." White's Selborne.
2. The ciperius, or grey fquirrel, with plain ears; hair of a dull grey colour, mixed with black, and often tinged with dirty re!low; belly and infides of the legs white; tail long, bu\{hy, grey, and itriped witl black: fize of a half grown rabbit.-Inhabits the woods of Northern Afia, North America, Peru, and Chili. They are very numerous in North America, do incredible damage to the plantations of maize, run up the ftalks and eat the young ears. Defcend in valt flocks from the mountains, and join thofe that inhabit the lower parts ; were profcribed by the provinces, and a reward of three-pence per head given for every one that is killed. Such a number was deftroyed one year, that Pennfylvania alone paid in rewards L. 8000 of its currency. Make their nefts in hollow trees, with mofs, Atraw, wool, \&c. Feed on maize in the feafon, and on pine-cones, acorns, and malts of all kinds : form holes under.ground, and there depofit a large ftock of winter provifion. Deffend from the trees, and vifit their magazines when in want of meat ; are particularly bufy at the approach of bad weather; during the cold featon keep in their neft for feveral days together; feldom leap from tree to tree, only run up and down the bodies; their hoards often dettroyed by fivine; when their ma. gazines are covered with deep finow, the fquirrels often perifh for want of food; are not eafily thot, nimbly changing their place when they fee the gun levelled; have the actions of the common fquirrel ; are eafily tamed; and their flefh is efteemed very delicate. Their furs, which are exported under the name of petit-gris, are valuable, and ufed as linings to cloaks.
3. The niyer, or black fquirrel, with plain ears; fometimes wholly black, but often marked with white on the nofe, the neck, or end of the tail; the tail fhorter than that of the former ; the body equal. It inhabits the north of Afia, North America, and Mexico; breeds and aflociates in feparate troops; is equally numerous with the former ; commits as great ravages among the maize; makes its neft in the lame manner, and forms, like them, magazines for winter food. The finett are taken near the lake Baikal, and about Bargu-zinfkoi-ofrog, upon the Upper Angara, in the diftrift of Nertflinink, which are the beft in all Siberia; thefe continue black the whole year, the others grow rulty in fummer.-There is a variety with plain ears; coarfe fur mised with dirty white and black; throat and infide of the legs and thighs black; tail much fhorter than thofe of fquirrels ufually are ; of a dull yellow co. lous, mixed with black; body of the fize of the grey fquirrel. It inhabits Virginia; the planters call it the cat fquird.
4. The flavus, or fair fquirrel, with the body and tail of a faxen colour ; of a very fmall fize, with plain round ears, and rounded tiil. Inlabits the woods near Amadabad, the cipital of Guzurat, in great abundancc, leap. ing from teee to tree. Linnaus fitys it is an inhabitant of South Americ.l.
5. The firiatus, or ground fquirrel, with plain ears;
ridge

Plate
fig. 1.
ridge of the back marked with a black freak; each fide with a pale yellow fripe, bounded above and below with a line of black; he.rd, lindy, and tail, of a reddilh brown; the tail the darkelt: hreatt and belly whte; nofe and feet pale-red; eycs full.-Inhathits the north of Afia, but found in the greateft abundance in the forelts of North America. They never 1 un up trecs except they are purfued, and find no other means of efcaping : they burrow, and furm their habitations under gromad, with two entrances, that they may get accet's to the nne in cafe the other is ffopped up. Their retreats are formed with great fkil, in form of a long gallery, with branches no each fide, each of which terminates in an enlarged chamber, as a magazine to tore their winter provition in ; in one they lodge the acorns, in another the maize, in a third the hickery nuts, and in the hat their farnurite food the chinquapin chefint. 'They very feldom thir out during winter, at lealt as long as their provifions latt ; bat it that fails, they will dig into cellars where apples are kept, or barns where maize is fored, and do a great deal of milehief; but at that time the cat dethows great numbers, and is as great an enemy to them as to mice. During the maize harvelt thefe fquirels are very buly in biting off the ears, and filling their mouths io full with the corn that their cheeks are quite dillended. It is onervable that they give great preference to certain food; for it, atter filling their mouths with rye, they happen to meet with whear, they fing away the firlt, that they may indulge in the laft. They are very wild, bite feverely, and are fearcely ever tamed; the fkins are of little ufe, butare fometimes ufed to line cloaks.
6. The glis, or fat fquirrel, with thin naked ears; body covered with loft alh-coloured hair : belly whitilh; tail full of long hair: from nofe to tail, near lix inches; tail, four and a half: thicker in the body than the common fquirrel.-Inhabits France and the fouth of Europe; lives in trees, and leaps from bough to bough; feeds on fruirs and acorns; lodges in the hollows of trees; remains in a torpid fate during winter, and grows very fat. It was efteemed a great delicacy by the Romans, who had their glirasia, places conltrueted to keep and feed them in.
7. The fugitha, or arrow fquirrel, with a finall round head, cloven upper lip: fmall blunt ears, two limall waris at the utmolt corner of each eye, with hairs growing out of tirm : neck fhort: four toes on the fore feet; and inttead of a thumb, a flender bone two inches and a half long, lodged under the lateral membrane, ferving to llretch it out: from thence to the hind legs extends the membrane, which is broad, and a continuation of the fk in of the fijes and belly: there are fire toes on the hind teet; and on all the toes, tharp compreffed bent claws: the tail is covered with long hairs difpofed horizontally: colour of the head, body, and tail, a bright bay ; in fome parts inclining to orange : breaft and belly of a yellowilh white: length from nofe to tail, eighreen inches; tail, fifteen.-Lnhabits Java, and others of the Indian iffunds: leaps from tree to tree as if it hew : will catch hold of the boughs with its tail. Niewhoff, p. 354 . detcribes this under the name of the fiying cat, and lays the back is black.
8. The volans, or flying fquirrel, with round naked ears, full black eyes, and a lateral membrane from the fure to the hind legs: tail with long hairs difpofed husi-
\%ontally, longen in the middle: is colvur above, a bruwn. ith affi; beneath, white tinged with yellow: mish lef, than the conimon fquirrel. Tababits Linlinal, Liplanl, Poland, Rulfis, North Americs, and New Spain: lives in hollow trees: Ileeps in the day: during the night is very lively: is gre gatious, numbers being found in onse true: Icaps from bough to buugh fometimes at the dithince of ten yards; this action has improperly been called Alying, for the animal cannot go in any otiser direction than forward; and cven then canrat keep an even line, but finks confiderably before it can reach the place it aims at: [mfible of this, the fquirrcl mounts the higher in proportion to the dittance it wifhes to reach : when it would leap, it feretches out the forelegs, and extending the membranes becumes fecifically lighter than it would utherwici be, and thus is enabled to fering furbher than other fquirrels that have not this apparatus. When numbers leap at a time, they feem like leaves blowa off by the wind. Their lood the fame as the other fquirrels. They are eafily tamed: bring three or four ynung at a time. See fig. 3 \& 4 , the one reprefenting the animal in what is called a fying, the other in a fittin, pulture.
SCIURUS, in botany: A genus of the monogynia order, belonging to the didndria class of plants ; and in the nutural method ranking with thofe that are doubtul. The calyx is quinquedentate; the corolla bilabiated; the filaments are barren; the capfules five, and joined together ; bivalved, unilocular, with one feed. Of this there is one fpecies, viz. aromatioa, a native of Guiana.

SCLAVONIA, a country of Europe, between the rivers Save, the Drave, and the Danube. It is divided into lix counties, viz. Polegra, Zabrab, Creis, Warafden, Zreim, and Walpon, and belongs to the houfe of Aultria. It was formerly called a lingdom; and is very narroiv, not being above 75 miles in breadth; but it is 300 in lengeth, from the trontiers of Auftrid to Bel. grade. The ealtern part is called Ratzia, and the inbabitants Ratzians. Thefe, from a particular notion, are of the Greek church. The language of Sclavoniz is the mother of four others, namely, thofe of Hungary, Bohemia, Poland, and Ruffia.

SCLERANIHUS, in botany: A genus of the digynid order, belonging to the dodecandria clafs of plants, atd in the natural method ranking under the 22 d order, Carynphyliti. The caly x is monophyllous; there is no corolla; there are two feeds contained in the calyx.
SCLERIA, in bntany: A genus of the tetrandria order, belunging to the munocia clafs of plants; and in the natural method ranhing under the fth order, Gramina. The calyx has a gluma, with from two to fix valves; the tlowers mimeous; the feed a fort ol nut, fmall, oblong, and himing. There are fix fipceics, all of them natives of the Weft Indies.

SCLEROTICS, mediciaes proper to harden and confulidate the theth of the p.arts tw which they are ap. phied; as purilain, houre-leck, Ilea-wort, garden mightihade, scc.

SCOLOPAX, in ormithology, a genus belongrig to the order of grallx. The Lack is cylindricat, ob tufe, and longer than the head; the noftrils are linear ; the face is covered; and the fect have four toes. 'There are 18 feceies; of which the fullowing are the princi-
1. The arquair, or curlew, frequents our fea-coatts and marlles in the winter time in large flocks, walking on the open fands; feeding on thells, frogs, crabs, and other marine infects. In fummer they retire to the mountainous and unfrequented parts of the country, where they pair and breed. Their eggs are of a pale olive colour, marked with irregular but diftingt fpots of pale brown. Their flefh is very rank and fifhy, notwithftanding an old Englifh proverb in its favour. Curlews differ much in weight and fize; fome weighing 37 ounces, nthers not 22 : the length of the largeft to the tip of the tail, 25 inches; the breadth, three feet five inches; the bill is feven inclies long: the head, neck, and coverts of the wings, ate of a pale brown; the middle of each feather, black; the breatt and belly white, marked with narrow oblong black lines: the back is white, fpotted with a few black frokes: the quill-feathers are black, but the inner webs fpotted with white; the tail is white, tinged with red, and beautifully barred with black; the legs are long, flrong, and of a bluith grey colour ; the bottoms of the tnes flat and broad, to enable it to walk on the foft mud, in fearch of food.
2. The pheopus, or whimbrel, is much lefs frequent on our thores than the curlew; but its haunts, food, and general appearance, are much the fame. It is obferved in vifit the neighbourhood of Spalding (where it is called the curero knot) in valt flooks in April, but continkes there no longer than May; nor is it feen there any other time of the year: it feems at that feafin to be on its palfage to its breeding place, which Mr Pennant fufpects to be among the highlands of Scotland. The fpecific difference is the fize; this never exceeding the weight of 12 ounces.
3. The raficola, or woodcock, during fummer inhabits the Alps of Norway, Sweden, Polith Prufid, the march of Drandenburg, and the northern parts of Europe: they all retire from thofe countries the beginning of winter, as foon as the frofts commence ; which force them into milder clinates, where the ground is open. and adapeed to their manner of feeding. They live on worms and infects, which they fearch for with their long bills in foft grounds and moift woods.Wondcocks generally arrive leere in flocks, taking adrantage of the night or a mift : they foon feparate; but before they return to their native haunts, pair. They feed and fly by night; beginning their flight in the evening, and return the fame way or through the fame glades to their day retreat. They leave England the latter end of February, or beginning of March; not hut they have been known to continue there accidental19. Thefe birds appear in Scotland firft on the eaftern craft, and make their progrefs from eaft to weft. They (b) not arrive in Breadabane, a central part of the kingdom, till the beginning or middle of November; nor the coafts of Nether Lorn, or of Rofsthire, till December or January: they are very rare in the remote Hebrides, and in the Orkneys. A few Aragglers now and then arrive there. They are equally fearce in Caithnefs This fpecies of woodock is unknown in North America: but a kind is found that has the general appearance of it ; but is fearce half the fize, and wants the bars on the oreatt and belly. The weight of the woodcock is ufually about 12 ounces; the length ncar 54 inches; and the breadth, 26 ; the bill is three
inches long, durky towards the end, reddifh at the bafe; tongue finder, long, flarp, and hard at the point; the eyes large, and plated near the top of the head, that they may not be injured when the bird thrufts its bill into the ground ; from the bill to the cyes is a black line; the fore-head is a reddifh ath colour ; the crown of the head, the hind part of the neck, the back, the coverts of the wings, and the fcapulars, are prettily barred with a ferruginous red, black, and grey; but on the head the black predominates: the quill feathers are dufky, indented with red marks. The chin is of a pa'e yellow; the whole under fide of the body is of a dirty white, marked with numerous tranfverfe lines of a duky colour. The tail confifts of 12 feathers, dufky or black on the one web, and marked with red on the other; the tips above, are ath-coloured, below white; which, when fhooting on the ground was in vogne, was the fign the fowler difcovered the birds by. The legs and toes are livid; the latter divided almoft to their very origin, having only a very fmall web between the middle and interios toes; as thofe of the two ipecies of fnipes found in England.
4. The agoccphala, ar godwit, weighs 12 ounces and a half; the length is 16 inches; the breadth 27; the bill is four inches ling, turns up a little, black at the end, the reft a pale purple ; from the bill to the eye is a broad white froke; the feathers of the head, neck, and back, are of a light reddifh brown, marked in the middle with a dufky fpot ; the belly and vent feathers white, the tail regularly barred with black and white. The fix firf quill-feathers are black; their interior edges of a reddifli brown; the legs in fome are dufky, in others of a greyifh blue, which perhaps may be owing to different ages; the exterior toe is conneited as far as the firt joint of the middle toe with a ftrong ferrated membrane. The male is difinguifhed from the female by fome black lines on the breatt and throat; which in the female are wanting. Thefe birds are taken in the fens, in the fame feafon and in the fame manner with the ruffs and recves \(\dagger\); and when fattened are + see efteemed a great delicacy, and fell for half a crown or Tainçab five fhillings a piece. A fale of the fame fpecies is placed in the net. They appear in frrall flocks on om coalts in September, and continue with us the whole winter they walk on the open fands like the curlew, and feed on infects.
5. The glctiv, or greenfank, is in length to the end of the tail, 14 inches; to that of the toes, 20 ; its breadth, 25. The bill is two inches and a half long; the upper mandible black, Araight, and very flender; the lower reflects a little upward, the head and upper part of the neck are afh-colonred, marked with fmall duky lines pointing down; over each paffes a white line ; the coverts, the fcapulars, and upper part of the back, are of a brownifh afh-colour; the quill-feathers dulky, but the inner webs fpeckled with white; the breat, belly thighs and lower part of the back, are white; the tail is white, marked with undulated dufky bars: the inner coverts of the wings finely croffed with double and treble rows of a dufky colour. It is a bird of an elegant flape, and fmall weight in proportion to its dimenfions, weighirg only fix ounces. The legs are very long and fiender, and barc above two inches higher than the knees. The exteriol toe is united to the middle toe, as far as the fecond joint, by a frong

\section*{S : O \\ 715 ]}
scolopas, membrane which berders their fides to the very end. Scolopen- Thefe birds appear on the Englith coafts and wet dra. grounds in the winter-time in but finall numbers.
6. The calidris, or red-thank, is found on moft of our hores; in the winter-time it cenceals itfelf in the gutters, and is gerierally found fingle or at molt in pairs. It breeds in the fens and marfhes; and tlies round its neft when difturbed, making a noite like a lapwing. It lays four eggs whitith tinged with olive, marted with irregular lyots of black chiefly on the thicker end. It weighs five ounces and at hall: the length is 12 inches, the breadth 21 ; the bill near two inches long, red at the bafe, black towards the point. The head, hind p.rtt of the neck, and fcapulars, are of a dufky ath-culour obfcutely fpoted with black; the back is white, iprinkled with black fpets; the tail elegantly barred with black and white ; the cheeks, under lide of the neck, and upper p.irt of the brealt, are white, ftreahed downward with dufky lines; the belly white ; the exterior webs of the quill-feathers are dufly; the legs long, and of a fine bright orange colour ; the utmoft toe connected to the middle toe by a fmall membrane; the inmolt by another fill fmaller.
․ The guilinago, or common fnipe, weighs four ounces; the length, to the end of the tuil, is near 12 inches; the breasth about \(1+\); the bill is three inches iong, of a dulky colour, that at the end, and often rough like thagreen atove and below. The head is divided lengthwife with two black lines, and three of red, one of the latt palling over the middle of the head, and one above each eye : between the bill and the cyes is a dulky line; the chin is white; the neck is varied with brown and red. The feapulars are beautifuily lriped leughthwile with black and jellow; the quill-feathers are dutky ; but the edge of the firlt is white, as are the tips of the fecondary leathers: the quill-feathers next the back are barred with black and pale red; the breaft and belly are white; the coverts of the tail are long, and almoft cover it ; they are of a reddifh brown colour. The tail contifts of \(1+\) feathers, black on their lower part, then croffed with a broad bar of deep orange, another narrow one of black; and the chis white, or pale orange. The vent fathers are of a dull yellow ; the legs pale green ; the toes divided to their origin. In the winter-time finipes are very frequent in all our marthy and wet grounds, where they lie concealed in the rulhes, âc. In fimmer they difperfe to different parts, and are found in the midtt of the higheft mountains as well as of the low moors; their nelt is made of dried grats; they lay four eggs of a dirty olive colour, marked with dulky fpots; lacir young are fo often found in England, that we doubt whetier they ever entirely leave that illand. When they are dillurbed much, particularly in the breeding featons, they foar to a valt hoight, making a lingular bleating noife; and when they difeend, dart down with waft rapidity: it is alfo amuting to obferve the cock, while his mate fits on her eggs, poife himfelf on his wings, making fometimes a Whitling and fomectimes a drumming noife. Their food is the lame with that of the woodecek; their flight vely irregular and fwift, and attended with a thrill ficream. They are moft univerfal birds, found in every quarter of the globe, and in all climates.

SCOLOPENDRA, in zoologj, a genus of infe?s belonging to the order of apters. The feet are very
numerous, being as matny on caels fiul as there are joints in the body; the antennz are fetacecus: there are two jointed pappi, and the body is depreffed. - Thefe inferts are very lomidable and noxious in the warm countrics, where they grow to the lengeth of a quater of a yard or more, though in this climate they leldom grow above an inch long. The fcolopendra is alfo called the centipes from its number of feet. In the Eatt Indies it grows to dix inches in length, and as thick as a man's linger: it confitts of many joints; and from each joint proceeds a leg on each fide: they are covered with hair, and feem to have no ejes; but there are two feelers on the head, with which they find out the way they are to pafis the head is very round, with two fmall harp teeth, with whicl they inflict wounds that are very paintul and dangerons. A failor chat wats bit by one on board athip felt excefive pain, and lais life was fuppofed to be in danger; but by the application of rcafted onions to the part he recovered. The bite of the icolopendra morfitans \(f\) in Jamaica is \(\$\) See Plate faid to be as poifonous as the lling of a fco:pion.- cecexse. Some of the fecies live in holes in the earth: others under floner, and among rotten wcod; fo that the removing of thefe is exceedingly dangerous in the countries where the follopendra brech. - Thefe infects, like the fcorpion, are fuppofed to be produced pericet from the parent or the egg, and to undergo no changes after their firf exclulion. Thes are found of all fizes; which is a fufficient reafon for believing that they prefurve their firft appearance through the whole of their exiltcace. It is probable, however, that, like moft of this clat:, they olten change their thins; but of this we have no certain information. The fcolopendra forficata is the largeft in this country, of a dun culour, fimooth and compofed of nine faly feginents, without reckoning the head. The feet are 15 in number on each fide, and the laft longer than the reft, and turned b.ickwards, form a kind of forky tail. The antenne are twice the length of the head, and confilt of 42 thort fegments. 'The infet's progicllise motion is very quick, and fometimes ferpentine. It is found under flones on the ground, under flower-pots and garden boxes.

SCOLIMUS, in botany: A genus of the polygamia xqualis order, belonging to the 「yngenefia clats of plants; and in the natural method ranking under the 40th order, Compofix. The receptacle is paleaccous; the calyx imbricated and prickly, without any pappus.

SCOMBER, the Mackerel, in ichthyology, a genus belonging to the order of thoracici. The head is fmooth and compreffed, and there are feven rays in the gill membrane. 'There are ten fpecies;-of which the molt remarkable are the following.
1. The icomber, or common mackerel, a fummer-filh of paltage that vifits our thores in valt thoals. It is lefs ufetul than other fpecies et gregarions filh, being very tender, and unti: for carringe; not but that is may be preferved by pickling and talting, a method, we belicve, prantifed in many places, where it proves a great relief to the poor during winter. It was a fith greatly cllcemed by the Romans, becaufe it furnithed the precious gatum, a fort of pick!e that gave a high relifh to their liuces; and was betides ufed medicinally. It was drairn from dife: ent kinds of Eih, bat that made from the mackersl had the preference: the belt was made at
\(\underbrace{\text { Scomber. }}\) Carthagena, vaft quantities of mackerel being taken near an adjacent ifle, called from that circumilance Scombraria, and the garum, prepared by a certain company in that city, bore a high price, and was diftinguilhed by the title of garum fociorunn. This fifh is eafily taken by a bait; but the belt time is during a frefh gale of wind, which is thence called a mackerel galc. In the fpring the eyes of mackerel are almolt covered with a white film; during which period they are half blind. This film grows in winter, and is caf the beginning of fummer. It is not often that it exceeds two pounds in weight, yet there have been infances of fome that weighed upwards of five. The nofe is taper and fharp pointed ; the eyes large ; the juws of an equal length; the teeth fmall, but numerous. The form of this fifh is very elegant. The brdy is a little comprefied on the fides: towards the tail it grows very flender, and a little angular. It is a mof beautiful fifh when alive; for nothing can equal the brilliancy of its colour, which death impairs, but does not wholly obliterate.
2. The thunnus, or tunny, was a fith well known to the ancients: it made a confiderable branch of commerce : the time of its arrival in the Mediterranean from the ocean was obferved, and Aations for taking them were eftablifhed in places it mof frequented.

There are fill very confiderable tunny fifheries on the coalt of Sicily, as well as feveral other parts of the Mediterranean; where they are cured, and make a great article of provifion in the adjacent kingdoms.They are caught in nets, and amazing quantities are taken; for they come in vaft thoals, keeping along the fhorcs. See Tunny-Fishert.

They frequent the Britill coafts, but not in fhoals like the tunnies of the Mediterranean. They are not uncommon in the lochs on the weftern coaft of Scotland; where they conse in purfuit of herrings; and often during night ftrike into the nets, and do confiderable damage. When the fifhermen draw them up in the morning, the tunnjr rifes at the fame time towards the furface, ready to catch the fifh that drop out. On perceiving it, a ftrong hook baitod with a herring, and faftened to a rope, is inftantly flung out, which the tunny feldom fails to take. As fnoa as hooked, it lofes all firit; and after a very little refititance fubmits to its fate. It is dragged to the fhore and cut up, either to be fold freth to people who carry it to the ceuntry markets, or is preferved falted in large caks. The pieces, when frefl, look exactly like raw beef; but when boiled turn pale, and have fomething of the flavour of falmon.

One that was taken when Mr Pcmmant was at Iaverary in 1769 , weighed 460 pounds. The fith was fe. ven feet ten inches long: the greatelt circumference five feet feven; the lealt near the tail one font fix. The body was round and thick, and grew fucdenly very flender towards the tail, and near that part was angular. The irides were of a plaing green: the teeth very minute. The tail was in form of a crefent; and two feet feven inches between tip and tip. The fkin on the back was fmooth, very thick, and black. On the belly the feales were vifible. The colour of the fides and belly was filvery, tinged with carulean and pale purple : near the tail marbled with grey.

They are known on the coalt of Scotland by the
name of mackrelfure: ATackrel, from being of that genus; and furc, from the Danifh, for "great."

SCONE, a town of Scotland, remarkable for being the place where the kings were anciently crowned. W. Long. 3. 10. N. Lat. 56. 28. Here was once an abbey of great antiquity, which was burnt by the reformers at Dundee. Kenneth II. upon his conqueft of the liits in the ninth century, having made Scone his principal refidence, delivered his laws, called the Mucalpin laws, from a tumulus, named the Mote Hill of Scone. The prefent palace was begun by the earl of Gowric ; but was completed by Sir David Murray of Gofpatrie, the favourite of king James VI. to whom that monarch had granted it; and the new pollellor in gratitude to his benefactor put up the king's arms in feveral parts of the houfe. It is built around two courts. The dining room is large and handfome; and has an ancient and magnificent chimney-picce, and the hing's arms, with this motto:

\section*{Nobis lacc invifa mijerunt centum fex proavi.}

Beneath are the Murray arms. In the drawing room is fume good old tapeltry, with an excel.ent figure of Mercury. In a fmall bed-chamber is at medley ficrip-ture-piece in needle-work, with a horder of animals, pretty well done, the work of queen Mary during her confinement in Loch Leven Calle. The gallery is about 155 feet long, the top arched, divided into compartments filled with paintings in water-colours. The pieces reprefented are various kinds of huntings; that of Nimrod, and king James and his train, appear in every piece. Till the deftruction of the abbey, the kings of Scotland were crowned here, fitting in the famun wooden chair which Edward I. tranfported to Weltminfter abbey, to the great mortification of the Scots, who looked upon it as a kind of palladiun. Charles II. before the battle of Worcefter, was crowned in the prefent chapel. The old pretender refided for fome time at Scone in 1715 ; and his fon paid it a vilit in 1745.

SCOPARIA, in botany: A. genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 40 th order, Perfonate. The calyx is quadripartite; the corolla the fame, and rotaceous ; the capfule unilocular, bivalved, and polyfpermous.
sCOper, or scupper Holes, in a Thip, are holes made through the fides, clofe to the deck, to carry off the vater that comes from the pump.

SCOPOLIA, in botany: A genus of the oftandria order, belongi:g to the gynandria clafs of plants; and in the natural method ranking under the ith clafs, Sarmentecta. The calyx is diphyllous; the corolla quadrifid; the anthere coalefee in two columns, one placed above the other. Of this there is only one fpecies, viz. the Compofial.

SCORbuTUS, the Scurvy. See Medicine, \(n^{\circ} 8\).
SCORDIUM, or Water-germander, in botany, a fpeciernf Teucrium.

SCOR1A, or Dross, among metallurgifs, is the recrement of metals in fufion; or, \(m\) re determinately fpeaking, is that mafs which is produced by melting metals and ores: when cold, it is brittle, and not diffoluble in water, being properly a kind of glafs.

Soorifica- SCORIFICATION, in metallurgy, is the art of tion, Siorpio. reducing a body, either entirely or in part, into fcoria.

SCORPANA, in ichthyology, a genus belonging
to the order of thoracici. The head is large and fharp; the eyes are near each other; there are teeth in the jaws, palate, and fauces; and there are feven rays in the membrane of the gill. The feceies are three, viz. the porcus, forofit, and horrida. According to Mr Willonghby, the forpxna is a fifh of the anguilliform kind, called by the people of Cornwall father luyber. Scorpena is alfo the name of a fint caught in many parts of the Mediterranean. It fellom grows to more than a pound weight. Its body is loner, bat not flatted, and is moderately thick. Its hedd is cextrenely large, and is armed with prichles, and it grows gradualiy lefs from thence to the tail. The prickles about the head are accounted venomous, and the filhermen uffually cut them off as foon as the filh is cauzht. Its tail is not forked, bat rounded at the end. The belly
Phate cceczev.

SCORPIO, in zonlogy, a genus of infers belong. ing to the order of aptera. It has eight feet, bofides two frontal claws; the eyes are eight in number, three on each fide of the thorax, and two on the back. It has two claw-llhaped palpira long jointed tail, with a pointed weapon at the extremity; it has likewife two combs fituated between the breaft and abdomen. There ate lix fpecies, all natives of fouthern climates.

Of all the clafles of noxious infects, the forpion is the moft terrible, whofe thape is hideons, whofe fize among the infects is enormous, and whofe fting is geaerally fatal. Happy for Britain, the foropion is entirely a Atranger there! In feveral parts of the continent of Europe it is but ton well known, though it feldom grows above four inches long: but in the warm tropical climates, it is feen a foot in length, and in every refpect as large as a lobfter, which it fomewhat refembles in Chape. There have been enumerated nine different kinds of this dancerous infect, including fpecies and varieties, chiefly diftinguithed by their colour; there being foorpiens yellow, brown, and afh-coloured; others that are the colour of rufty iron, green, pale yellow, black, claret colour, white, and grey. There are four principal parts diftinguifhable in this animal; the head, the brealt, the belly, and the tail. The icorpinn's head feems, as it were, juinted to the brealt; in the middle of which are feen two cyes; and a little more forward, two eyes more: placed in the fire part of the head: thofe eyes are to fmall, that they are fearcely perceivable; and it is probable the animal has but little occafion for feeing. The mouth is furnilhed with two jaws: the undermoft is divided into two, and the parts antched into each other, which ferves the animal as teeth, and with which it breais its food, and thrults it into its mouth: thefe the forpion can at pleafure pull back into its mouth, fo that no part of them can be feen. On each fide of the head ate two arms, each compofed of four joints; the lant of which is large, with ftrong mufcles, and made in the manner of a lobiter's claw: Below the breat are eight articulated legs, each divided into fix joints; the two hindmof of which are each provided with two crooked claws, and here and there covered with hair. The belly is divised into feven little rings; from the lowett
of which is continued a tail, eompofed of fix joints, which are briftly, and formed like little globes, the lat. being armed with a cronked fling. This is that fatal inftrument which renders this infeet fo form:dable : it is long, pointed, hard, and hollow: it is pierced near the bate by two fmall holes, through which, when the animal fings, it ejects a drop of poifon, which is white, caultic, and fatal. The refervoir in which this poifon is kept, is in a fmall bladder near the tail, into which the venom is diffilled by a peenliar apparatus. If this badder be greatly preffed, the venom will be feen iifuing cut throush the two holes abovementioned; fo that it appears, that when the animal Atings, the bladder is prefled, and the venom illues through the two apertures into the wound.

We have here given the common account of the Ating of thefe noxious animals; but though we cannot pretend to determine between them, we flall hay beiore our readers the following obfervations from a treatifo on Tropical Difcufes, \&ec. by Dr Mofely of the Chelfea Hofpital. "Galen juflly obferves, that a perfon who had not witneffed the lact, would not fuppote that io fmall an irjury as the fling of a forpion, or the bite of a puifonous ipider, conld produce the violent effects which they do in the whole body. He lays, the aculeus, or Ating, of a fcorpion ends in the minutert point: and has no perforation through which any poifun can pafs into the wound. Yet, he fays, we miat fuppofe the venom to be fome fuirital fubltance, or moillure, in which a great power isconcentrated in a fmall compars. Before 1 had an opportunity (fays Dr Mofeley) of examining this fubject, my seípeat for the opinion of Galen made me doubt the accuracy of Lceuwenhoek, Redi, Mead, and nthers, who affert that there is an aperture near the cufpis of a foopion's Aing ; and that through this aperture a liquid poifon is inje.ted when a wound is inflired. Repeated experiments, with the belt glaffes, have never enabled me to difoover any foramen, or opening, whatever."

The following cure may alfo be worth the sealer's noticc. "Mrs Pidgcley, at Kingfon in Jamaica, in Janmary 1781 , was llung by a corpion in the font, above the little toe. The part became intlaraly ted and painful; and foon alter livid. The pain increated to great feverity: Scme rum was applied to the wound, on which the pain immediately lett the foct, and pures up to the groin, with great ageny. The pais (till pafted upwards, and diffufed itfelt about the pis of the Ilomach, neek, and throat, attended with trcmors, cold fiweats and languors. As the pain palied the abdomen, it occaliwed a violont purgiog and tuinting, which ceated on its sdvancing higher. I * was called to her, "irs Mofo
and gave her the followios medicines, a few dofes ef and gave her the followiog medicines, a few dofes ef 1 y which removed cvery fymp!om. She had been extreme. ly ill for hirty-iix hours. 13, Sul. Sucian. Эij ; Camfior. gr. xij: Cinnabso. Antinzon.gr. a; Cinfia. Ciaru'. q. f. Jiont boli fex. One of these was taken evory hour, with four ipoonfuls of the following mixure: Iso fir. Mentla \(\tilde{j}\) vij ; Elix. Puregaric. \(\mathfrak{3}\) ij; Syr. Craciz il; Misce."
There are few animals more formid:ble, or mare truly mifchicvous, than the footpion. As it takes refuge in a finall place, and is generally iound theltering in houfes, it mult frequently fiag thofe atmong
S.orphe Whom it refides. In fome of the towns of Italy, and in France, in the province of Languedoc, it is ons of the greateft pefts that torments mankind: but its malignity in Europe is triffing, when compared to what the matives of Africa and the call are known to experience. In Batavia, where they grow twelve inclies long, there is no removing any piece of furniture, without the utmot danger of being Itung by them. Botman allures us, that along the Gold Coall they are often found larger than a lobfer ; and that their fling is inevitably fatal. In Europe, however, they are by no means fo large, fo yenomous, or fo numieruus. The general fize of this animal does not exceed two or three inches; and its fting is very feldom found to be fatal. Maupertius, who nade feveral expriments on the fcorpion of Languedoc, finund it by no means fo invariably dangerous as had till then been reprefented. He provoked one of them to fing a dog, in three places of the belly where the animal was without hair. In about an hour after, the poor animal feemed greatly fivollen, and becanne very fick; the then calt up whatever he had in his bowels; and for about three hours conlinued voniting a whitifh liquid. The belly was always greatly fwollen when the animal began to vomit; but this operation always feemed to abate the fwelling ; which alternately fiwelled, and was thus empsied, fior three hours fucceflively. The poor animal after this fell into convulions, bit the ground, dragged himelf along upon his fore-feet, and at latt died, tive hours after being bitten. He was not partially fwollen round the place which was bitten, as is ufual after the dling of a wafp or a bee; but his whole body was inHated, and therc only appeared a red fpot on the places where he had been flung.
Some days after, however, the fame experiment was tried upon another dog, and even with more aggravated cruelty : yet the dog feemed no way affected by the wounds: but, howling a little when he received them, continued alert and weil after them; and foon after was fet at liberty, without fhowing the fmallel fymptoms of pain. So far was this poor creature from being terrificd at the experiment, that he left his own matter's houfe, to come to that of the philofopher, where he had received more plentiful entertainment. The fame experiment was tried by frefl fcorpions upon feven other dogs, and upon three hens; but not the finalleft deadly fymptom was feen to enfue. From hence it appears, that many circumfances, which are uttelly unknown, mult contribute to give efficacy to the fcorpion's venom. Whether its food, long fating, the faifon, or the nature of the velfels it wounds, or its itate of maturity, contribute to cr retard its malignity, is yet to be alcertained by fucceeding experiment. In the trials made by our phi:lofopher he employed fcorpions of both fexes, newly caught, and feemingly vigorous and astive. The fuccefs of this experiment may ferve to fhew, that many of thofe boated antidotes which are given for the cure of the fcorpion's ting, owe their fuccefs rather to accident than their own eficicacy. They ouly happened to cure whent their fing was no waly dangerous; but in cafes of aftual malignitz, they might probably be utterly unferviceable.
The forpion of the tropical climates being much larger than the former, is probably much more veno. mous. He!bigius, however, who refided for many years
in the calt, aftures us, that he was often ftung by the icorpion, and never received any material injury from the wound: a painfultumor generally enfued; but he always cured it by rubbing the part with a piece of iron or ftone, as he had feen the Indians pratife before him, until the flefh became infenfible. Seba, Moore, and Bofman, bowever, give a very different account of the fcorpion's malignity \(:\) and affert, that, unlefs fpeedily relieved, the wound becomes fatal.

It is certain, that no animal in the creation feems endued with fuch an irafcible nature. They have often beenfeen, when taken and put into a place of fecurity, to exert all their rage againft the fides of the glafs veffel that contained them. They will attempt to fing a ftick when put near them: and attack a moule or a frog, while thote animals are far from offering any injury. Maupertius put three fcorpions and a moule into the bame velfel together, and they fonn ltung the lit. tle animal in different places. The moufe, thus affulted, llood for fome time upon the defenfive, and at laft killed them all, one after another. He tried this experiment, in order to fee whether the moule, after it had killed would eat the fcorpions; but the little qua. druped feemed fatisfied with the victory, and even furvived the feverity of the wounds it had received. Wolkanier tried the courage of the fcorpion aguintt the large fpider, and inclofed feveral of both kinds in glafs veffels for that purpofe. The fuccefs of this combat was very remarkable. The fpider at firft ufed all its efforts to entangle the fiorpion in its web which it immediately began fpinning ; but the forpion refoued itfelf from the danger, by flinging its adverliary to death : it foon after cut off, with its claws, all the legs of the fpider, and then fucked all the internal parts at its leifure.-If the fcorpion's tkin had not been to lard, Wolkamer is of opinion that the fpider would have obtained the victory; for he had often feen one of thefe fpiders defroy a toad.

The fierce fipirit of this animal is equally dangerous to its own fpecies; for fcorpions are the cruelleft enemies to each other. Manpertius put about 100 of them together in the fame glaf; and they farce came into contact when they began to exert all their rage in mutual deltruction: there was nothing to be feen but one univerfal carnage, without any ditinction of age or fex; fo that in a few days there remained only 14 , which had killed and devoured all the reft.

But their unnatural malignity is :till more apparent in their cruelty to their offspring. He inclofed a female fcorpion, big with young, in a glafs veffel, and the was feen to devour them as falt as they were excluded: there was but one only of the number that efcaped the gencral deltruction, by taking refuge on the back of its parent; and this foon after revenged the caufe of its brethern, by killing the old one in its turn.

Such is the terrible and unrelenting nature of this infect, which neither the bonds of fuciety nor of nature can reclaim : it is even afferted, that, when driven to any extremity, the fcorpion will often deftroy itfelf. The following experiment was ineffectually tried by Maupertius: "sut," fays Mr Goldfmith, "I an fo well alfured of it by many eye-witnelfes, who loave feen it both in Italy and America, that I have no donbt remaining of its velacity. A fcorpion, newly caught,
 Ni!p,
(if)

Iin. 1 .

in ar flriviug purseme.
scorpio, is plated in the midt of a circle of burning charcoal \(\underbrace{\text { scorpiuras }}\) and thus an egrefs prevented on every fide: the foorpion, as I am allured, runs for about a minute round the circle, in hopes of cfcaping : but finding that innpofible, it ftings iffelf on the back of the head; and in this manner the undaunted fuicide inflantly expires."

It is happy for mankind that thefe animals are thus deftructive to each other; fince oiherwife they would multiply in fo great a degree, as to render fome countries uninhabitable. The male and female of this infect are very eafily dittinguithable; the male being fnaller and lefs hairy. The female brings forth her young alive, and perfect in their hind. Kedi lhaving hought a quantity of foorpions, felected the temales, which, by their fize and roughnefs, were ealily diltinguilhable from the reft, and pucting them in leparate Blafs velfels, he kept them for fome dyys without focd. In about five days one of them brought forth 38 young ones, well-fhaped, and of a milk-white colour, which changed every day mire and more into a dark rufty hue. Another female, in a different veffel, brought forth 27 of the fame colour; and the day following the young oncs feemed all fixed to the back and belly of the female. For ncar a fortnight all thefe continued alive and well : but afterwards fome of them died daily; until, in about a month, they all died except two.

Were it worth the trouble, thefe animals might be hept living as long as curiofity fhould think proper. Their chief food is worms and infeet; and upon a proper fupply of thefe, their lives might be lengthened to thcir natural extent. How long that may be, we are not told; but if we may argue from analogy, it cannot be lefs than feven or cight years; and perhaps, in the larger kind, double that duration. As they have fomewhat the form of the lobiter, fo they refermble that animal in cafting their fhell, or more properly their Kkin ; fince it is fofter by far than the covering of the lobfer, and fer with hairs, which grow from it in great abundance, particularly at the joinings. The young lie in the womb of the parent, each covered up in its own membrane, to the number of 40 or 50 , and united to cach other by an oblong thread, fo as to exhibit altogether the form of a chaplet.

Such is the marner in which the common forpion produces its young: but there is a foorpion of America produced from the egg, in the manner of the ipider. The eggs are no longer than pins points; and they are depurted in a web, which they fpin from their bedies, and carry abont with them, till they are hateh. ed. As foon at the young ones are c.xcluded from the thell, they get upon the back of the parent, who turns her tail over them, and defonds them with her fing. It feems probable, therefore, that captivity produces that unnatural difpofition in the feorpion which induces it to deftroy its young; fince, at liberty it is found to protect them with fuch uncealing afliduity. For the various modes of preventing the fat.al confequences of the bites of thefe and other noxious animals, we refer to Moreley's tre tife abuve quoted.

Scorpio, Socrpion, in allronomy, the eighth fign of the zodiac demoted by the charaner m. See AstroNOMY.

Scorpion Fly. Sce Panorpa.
SCORPIURUS, Caterpillare, in botany: A genus of the decandria order, belonging to the diadclphia
clafs of plants; and in the natural method ranking un. Scerzonero, der the 32 d order, Payilionacer. The legumen is con- Scot. trated by incilicns on the infide betwiat erery two feeds, revoluted iound.

There are four fecies; the moll remarkalle of wheth is the vermicula:a, a native of Ftaly and Spain. It is an annual plan', with trailing herbaccous ftalks, which at cach juint have a fpatular-flaped leaf with a long foot-Italk. From the wings of the leaves comeont the foot falks of the flowers, which fuftain at the top one yellow butterfiy flower, fucceeded by a thick twiftel pod having the fize and appearamse of a large caterpillar, from whence it had this title. This has long been preferved in the gardens of Britain, more on account of its odd fanpe than for any great beauty. It is propagated by fowing the feeds on a bed of light enth; and when the plants come up, they muft be kept free from weeds and thinned, to that there nasy be a foot dillance between then.
sCorZonera, Tirer-grass, in botany: A genus of the polygamia \(x\) qualis order, belonging to thie fyngenefia clafs of plants; and in the natural method rankimg under the 49 th order, Compofia. The receptacle is nakel; the pappus plumy; the calyx imbricated, with fales membranaceous on their margins.
The molt remurkable fpecies is the hifparica, or cemmon foorzonera, which is cultivated in the galders of this country, both for culinary and medicinal purpofes, The root is carrot-flaped, about the thicknefs of a finger, covered with a dark brown fkin, is white withiu, and has a milky juice. The falk rifes three tect high, is fmooth, branchiag at the top, and garnifhed with a few narrow leaves, whofe bifes half cmbrace the ftalk. The flowers are of a bright jcllow colour, and terminate the ftalks in faly empalements compofed of many narrow tongue-fhaped hermaphrodite florets lying imbricatim over each other like the feales of a fifh, and are of a bright yellow colour. Afier theie are decayed, the germen, which fits in the common cmpalements, tuins to oblong cornered fects, having a roundifh ball of feathered down at the top. This plant is propagated by feeds; and muft he carefully thimned and kept free from weeds, otherwitc the planis will he weak.

The roois of fonzonera were formerly much celebra. ted for their alexipharnic virtuce, and for throwing nut the fmall-pox; bu: have now almoft entizely lof theicharaher: however, as they abound with an acrid juice, they may fometimes be of ufe for flrengthening the vilcera, and promoting the fuid fecretions.

SCOI', a cullomary contribution lide lapon all fin. jeet, according to their abilities. Whower were alleffed in any fum, though not in equal propotions, were faid to pay foot and lot.

Scor (Michael) of Balmiric, a learned Scotilh anthor of the \(3^{3 \text { th }}\) century. This fingular nam made the tour of lirance and Germany; and was received with fome diftinction at the coust of the emperor Frederic II. Having travclled ennugh to gratify his curiofity or his vanity, he returned to Scotland and gave himelf up to findy and contemplaton. He was \{killed in languages; and, contidering the age in which hic lived, was no mean preficient in philefophe, mathema. tics, and modicine. He tramated into Latin foom the Arabic, the hiflory of animals by the cciebrated phy-
fisian
treats concerning The Secrels of Nanre, which he which of generation, phyfrognomy, and the figns by men. We have allo a tract of his On the Nature of the Sun and Nloun. He there fpeaks of the grand operations as it is termed by alchymift, and is exceedingly folicttous about the projeged purwter, or the philofopher's Hone. He likewife publithed what he calls MIenja Phjl. Jophita, a treatife replete with all rology and chiromancy. He was much admired in his day, and was even lulpected of magic ; and had Roger Batcon and Cornelius Agrippa for his panegyriits.

Scor (Reginald), a judicious writer in the 6 th century, was the younger fon of Sir John Scot of Scot's-hall, near Swaethe in Kent. He Itudied at IIart-hall in the univerlity of Oxford; after which he retired to Smeethe, where he lived a ltudious life, and died \(m\) 1599. He publinhed, The perfea platform of a Hop gard \(n\); and a book entitled, The Difovery of Withcraft ; in which he fhowed that all the relations concerning magicians and witches are chimerical. This work was not only cenfured by king James 1 . in his Drmonology, but by feveral eminent divines; and all the 1. . pies of it that could be found were burnt.

SCOTAL, or Scotale, is where any officer of a forett keeps an ale houfe within the forett, by colour of his office, making people come to his houfe, and there fpend their money for fear of his difpleafure. We find it mentioned in the charter of the forett, cap. 8. "Nullus forentarius faciat Scotallas, vel garbas colligat, vel aliquam collectam faciat." \&c. Manwood, 2 I \(\%\). -The word is compounded of \(f\) sot and ale, and by tranfonfition of the words is otherwife called ale/bot.

\section*{SCOTER. See Anas, \(n^{\circ} 6\).}

Nora SCOT1A, or Nezu Scorland, one of the Bririfh fettlements in North America, fituated between \(43^{\circ}\) and \(49^{\circ}\) north latimde, and between \(60^{\circ}\) and \(67^{\circ}\) wert longitude, is bounded by the river St Laurence on the north; by the gulph of St Laurence and the Atlantic ocean on the eaft; by the fame ocean on the fouth; and by Canada and New England on the welt. - In the jear 1784 , this province was divided into two governments. The proviace and government now fyled New Brunffick is bounded on the weltward of the mouth of the river St Croix, by the faid river to its fource, and by a line drawn due north from thence to the fouthern boundary of the province of Quebec, to the nothward by the faid boundary as far as the weftern extremity of the Bay de Chaleurs, to the eafward by the 1aid bay to the gulph of St Laurence to the bay called Eay I'erie, to the fouth by a line in the centre of the B.ty of Fundy, from the river St Croix aforefiad, to the mooth of the Mufquat tiver, by the faid river to its fource, and from thence by a due eaft line acrofs the lithmus into the Bay Verte, to join the eaftern lot above delerioed, including all iflands within fix leagues of the coalt.

The chiet rivers are, the river of St Laurenc:, which foims the northern boundary. The rivets Rifgouche and Nipiliguit run from weft to eaft, and fall into the bay of St Laurence. The rivers of St Jom, Paflamequadi, Penobfot, and St Cioix, which run from
north to fouth, fall into Fundy Bay, or the fea a little to the ealtward of it.

The leas, adjoining to it are, the Atlantic ocean, Fundy Bay, and the gulph of St Laurence. The lef. fer bays are, Chenigto and Green Bay upon the ifhmus which joins the north part of Nova Scotia to the touth ; and the Bay of Chaleurs on the north-eall ; the Bay of Chedibucto on the fouth-eaft; the Bay of the Iflands, the Ports of Barr, Chebucto, Profper, St Margaret, La Heve, port Maltois, port Ryignol, port Vert, and port Joly, on the fouth; port La Tour on the louth-eaft ; pont St Mary, Annapolis, and M nas on the fouth lide of Fundy Bay, and port Roleway, now the moit populous of all.- The chief capes are, Cape Portage, Ecoumenac, Tourmentin, Cape Port, and Epis, on the eatt ; Cape Fogerie and Cape Canceatl on the fouth-ealt; Cape Blanco, Cape Vert, Cape Theodore, Cape Dore, Cape La Heve, and Cape Negrn, on the fouth; Cape Sable and Cape Fourche or the fouth-welt. - The lakes are very numerous, but have not yet received particular names.

The face of the country, when viewed at a diftance, prefents a pleafingly variegated appearance of hills and valleys, with fcarcely any thing like mountains to interrupt the prolpect, efpecially near the lea. A nearer approach difoovers thofe fublime and beautiful fcenes which are fo far fuperior to the gaudy embellifhments of art. Immente foretts, formed of the talleit trees, the growth of ages, and reaching almolt to the clouds. everywhere cover and adorn the land: Their leaves falling in autumn, add continually to that cruft of mofs, vegetables, and decaying wood, that has for many centuries been accumulating; whilit the rays of the fun, unable to pierce the thick thade which everywhere covers the ground, leaves it in a perpetual fate of damp and rottennefs; a circumftance which contributes, in no fmall degree, to incteafe the fharpuefs of the air in winter.

The clouds, flying over the higher grounds, which are covered in every direction with one vaft foreft, and arreited by the attraction of the woods, fill the country with water. Every rock has a fpring, and every foring caufes a fwamp or morafs, of frieater or lel's extent in proportion to its caufe : hence it is, that travelling becomes almoft impracticable in fummer, and is feldom attempted, but in the fall of the year, when winter begins to fet in, and the ground is already frozen.

The land throurhout the peninfula is in no part mountainons, but fiequently rifes into hills of gradurl afcent, everywhere clothed with woud. From theefe arife innumerable fprings and rivulets, which not only fertilize and adorn the country, but have formed, in the midft of it , a large lake or piece of frefli water, which is of various depths, and of which, however, littic mote is known, than that it has upon its borders very large tracts of meadow-land highly improveable. That part of the province which is beyond the Bas of Fundy, and extends to the river St Laurence, rifes alfo gradually as we advance from the fea quite to Canada, but is, however, hardly anywhere mountainous. Its lands are for the moft part very rich, particularly at a diftance from the fea; and its woods abound with the hardeft and loftieft trees.
'I'hough this country, like Canada, is fubject to long

Novz Scotia.

\section*{SC O}
and ferere winters, fucceeded by fudden and violent heats, often much greater than what are felt in the fan:e latitudes in Eurofe, yet it cannot be accounted an unhealchy climate. The air in generd in winter is very tharp, frotty, and dry; the iky ferene and unclouded, by which every kind of exercife adapted to the feafon is rendered pleafant and agrecable. The fogs are frequent near the fea, but feldom fyread themsives to anj) dilance inland.

Live winter commonly breaks up with heavy rains, and the iuhabitants experience hardly any of the delights of the fpring, which in England is accounted the mott agreable feafon of the year. Fiom a lifelefs and dreary appeazance, and the gloomy feenes of winter warped atound the vegetable world, the countr) throws off its difgufful attire, and in a few days cxhibits a grand and pleafant profpect; the vergetation being incunceivably rapid, nature paffes fudderiy from one oxireme to another, in a manner uttely unknown to countries accultomed to a gradual progrefion of feaforis. And, Atrange as it may appeatr, it is an acknowledged \(f a c t\), a fact which furnithes a certain proof of the purity of the air, tbat thefe fudden clanges feldom, if ever, affest the health of itrangers or Europeans.

In this country agriculture has yet made but fmall progrets. Nova Scotia is almoft a continued forelt, prodincing every kind of wood which grows in the reighbouring fates of New England. Four filths of ali the lands in the province are covered with pines, which are valuable not only for furnithing mafts, ipars, lumber for the fugar plantations, and timber for building, but for yielding tar, pitch, and turpentine, commodities which are all procured from this ufelul tree, and with which the mother-country may in a lew years eafily be fupplied.

All the various fpecies of birch, beech, and maple, and feveral forts of spruce, are found in all parts in great abundance ; as alfo numerous herbs and plants, cilher not common to, or not known in, England. Anongt thefe none is more p.entiful than fartaparilla, and a plant whofe root refembles thubab in colour, tafte, and effects; likewife the Indian or mourtain tea, and maiden-Lair, an herb nuch in repute for the lame purpofe, with fhrubs producing tirawberries, rafperries, and many other pleatiant fruits, with which the wonds in fummer are well fored: Of thele wild productions the eherries are beft, though finaller than ours, and growing in bunches fumewhat refembling grapes. The :alfuras tree grows ftentifuliy in common with others; but amongft them none is nore ufetul to the inhabitants than a fpecies of maple, diflinguthat by the name of the fuear tree, as afficiding a confiderable quantity of that valuable ingredient. See Sugar.

Amongf the natural produgions of Nova Scotia, it is necelfary to enumerate their iron-ore, which is fuppofed equally good with that found in any patt of America.

Lime-thene is likewife found in many places: it is extremely good, and is now much ured for building: independert of which, it gives the farmers and landholders a great advantage for improving the ground, as it is found by experience to be one of the moft approved things in the werld for that purpofe.

Several of the uffell ard moll common European fruis have been farated in many places ; fo that the Vor. XVI.
province row produces great quantities of appice, fonie peats, and a few plums, which are all gond cif their kind, clpecially the furmer. The frallier fruits, fuch as currants, goofeberrics, Sc. grow to as freat perfectiou as in Europe ; and the fame may be faid of all the common and ufeful kinds of garden plants. Among thefe their potatoes have the preference, as being the moft ferviceable in a country abounding with fith; and indeed they are not to be exceeded in goodnefs by ariy in the world. The maize, or Indian corn, is a natire of much warmer climates; and, though pianted heac, never arrives at more than two-thirds of its natural bignefs; a delect which arifes as vell from the fhortnefs of the fummer as the gravelly nature of the loil. Iobacco may likeriic be cultivated with eafe in Nova Scotia, as it is already cverywhere in Canada, from Lake Champlain to the ille of Orleans, for the purpofs of internal confumption.

This country is not deficient in the animal produc. tions of the neighbouring fates, particuldrly deci, beavers, and others. Wild fowl, and all manner of game, and many kinds of European fowls and quadrupeds, have from time 10 time been brought into it, and thrive well. A: the ciole of March the fifh begir to fpawn, when they enter the rivers in fuch fhoals as are incredible. Herrings come up in April, and the fturgeon and falmon in IHay: But the mote valuable appendage of Ncw Scotland is the Cape Sable coalt, along Which is one continued range of cod-fining banks and excellent harbours. 'This finhery employs a great num. ber of men, in fome feafons not lefs than 10,000 , when 120,000 quintals will be caught, of which 40,000 may be exported. There, at the lowett price, muf bring into the colony L. 26,000 Serling, either in cath er in commodities neceflary to the inhabitants.

Notwithfanding the comparatively uninviting appearance of this country, it was here that fome of the firf Eurrpean fettements wore made. The firft grant of lands in it was given by James I. to his fecretary Sir Walliam Alexander, from whom it had the name of Nora Scolia or Nirev Sculand. Since that period it has freguently changed hands from one private proprietor to another, and from the French to the Englifh nation backward and forward.

It was in \(160+\) that the French firt fettled in Now. Scotia, to which they gave the name of Acadis. In. Read of fixing towards the eaft of the peninfula, where they would have had larger feas, an eafy navigation, and plenty of cod, they chofe a fmall bay, alserwards called Erench Bay, which had nore of thefe advantages. It has been faid, that they were invited by the beanty of Por Royal, where a thoufand hips may ride in fafety from every wind, where there is an excellent bottom, and at all times four or five falhoms of water, and. eighteen at the entrance. It is more probable that the founders of this col ny were led to choofe this lituation, from its vicinity to the countries abounding in furs, of which the exclufive trade had been granted to them. This conje?ure is confirned by the following circumfance: that both the firt monopolizers, and thefe who fucceeded them, took the utmoft pains to divent the attention of their cruntrymen, whom an uretilad difpofition, or neceflity, brought into thefe resi \(n\), from the clearing of the woods, the breding of cattle, filhing, and every lind of culture ; choofing rather to 4 I crisige

Nova cotia. \(\rightarrow\)
engage the induftry of thefe adventurers in hunting or in trading with the favages.

This colony was yet in its infancy when the fettlement, which has fince become fo fantous under the name of Nerv England, was firft eftablifhed in its neighbour. hood. The rapid fuccefs of the plantations in this new colony did not much attrat the notice of the French. This kind of properity did not excite any jealoury between the two nations. But when they began to fufpect that there was likely to be a compctition for the beaver trade and furs, they endeavoured to fecure to thenffilves the fole property of it, and were unfortunate enough to fucceed.

At their firt arrival in Acadia, they had found the peninfula, as well as the furelts of the neighbouring continent, peopled with fmall favage nations, who went under the general name of Abenakics. Thongh equally fond of war as other favage nations, they were more fociable in their manners. The millionaries eafily infinuating themfelves among them, had fo far inculcated their tenets, as to mike enthufialts of them. At the fame time that they taught them their religion, they infpired them with that hatred which they themfelves entertained for the Englifh name. This fundamental article of thcir new worthip, being that which made the frongeft impreffion on their fenies, and the only one that favoured their pallion for war, they adopted it with all the rage that was natural to them. They not only refufed to make any kind of exchange with the Eng1 fh , but alfo frequently ditturbed and ravaged the frontiers of that nation.
This produced perpetual hoftilities between the New Englanders and the French fettlers in Acadia, till that province was, at the peace of Utrecht, for ever ceded to the Englith, who feemed not for a long time to difcover the value of their new acquifition. They reftored to it its ancient name of Nora Scolia; and having built a flight fortification at Port-Royal, which they called Annapolis in honour of Queen Anne, they contended themfelves with putting a very fmall garrifon into it. In procefs of time, however, the importance of Nova Scotia to the commerce of Great Buitain began to be perceived; and at the peace of 1749 , the miniAry offered particular advantages to all perfons who chofe to go over and fettle in Acadia. Every foldier, failor, and workman, was to have 50 acres of land for himfelf, and ten for every perfon he carried over in his family. All non commifioned officers were allowed 80 ior themfelves, and is for their wives and children; enligns 200 ; lieutenants 300 ; captains 400 ; and all officers of a higher rank 600 ; together with 30 for each of their dependents. The land was to be tax free for the firft ten years, and never to pay above one livre government engaged to advance or reimburfe the ex- pences of pallaze, to build houfes, to furnifh all the neceffary inftruments for fithery or agriculture, and to defray the expences of fubfiftence for the firt year. Thefe encouragements determined 3750 perfons, in the month of May 1749, to go to America, in hopes of bettering their fortunc.
Thus encouraged, the province of Nova Scotia began to flourifh, though in 1769 it fent out only it veficls and 148 boats, which together amounted to 7324 t. ns, and received 22 veffcls and 120 boats, which to-
gether made up 7006 tons. They confructed three iloops, which did not exceed ino tons burden. Their exportation for Great Britain and for the other parts of the globe did not amount to more than 729,850 livres is fols 9 deniers \(\dagger\). Continuing, however, true \(\dagger\) Abour to its allegiance when the other colonies threw of the \(1.30,410\), dominiun of Great Britain, it has now become a place of gieat confequence both to the mother-country and the Weit Indies. Its thipping and feamen are rapidly increaling, as well as its produce, which affords the pleafing profpect of being able to fupply itfelf with all the neceffaries of life. The number of perfons who have abandoned their habitations in the more fouthern flates, and feitled either there or in Canada, cannot be eftimated, by the mot moderate calculation, at lefs than 80,000 ; and it is without doubt the moll convenient in point of fituation of any province in America for a maritime power of Europe to be poffefied of.

Scotia, in architeeture, a femicircular cavity or channel between the tores in the bafes of columns.

SCOTISTS, a fect of fchool-divines and philofophers, thus called from their founder 7 . Duns Scotus, a Scottifh cordelier, who maintained the immaculate conception of the virgin, or that the was born without original fin, in oppofition to Thomas Aquinas and the Thomifts.

As to philofophy, the Scotifts were, like the Thomifts, Peripatetics (fee Peripatetics) ; only diftinguifhed by this, that in each being, as many different qualities as it had, fo many different formalities did they diftinguifh; all diftinet from the body itfelf, and making as it were fo many different entities; only there were metaphyfical, and as it were fuperadded to the being. The Scotifts and Thomifts likewife difagreed about the nature of the divine co-operation with the human will, the meafure of divine grace that is necefisiary to falvation, and other ablfrufe and minute queftions, which it is needlefs to enumerate.

SCOTLAND, the country of the Scots, or that part of Great Britain lying to the north of the Tweed; is fituated between the \(54^{\text {th }}\) and 59 th degrees of north latitude, and extends in length about 278 miles, and in fome places near r 80 in breadth; containing an area of 27,794 miles. On the fouth it is bounded by England; on the north, eaft, and weft, by the Deucaledonian, German, and lrifh feas.

It is extremely difficult to give any fatisfactory ac. Origin of count of the origin of the appcllation of Scots, from the nane, which the country has derived its name. It has puz. zled the moft eminent antiquaries, whofe conjectures ferve 1ather to perplex than to clear up the difficulty. Nor is this to be wondered at, when Varro and Dionyfrws could not agree about the etymon of Italia, nor Plutarch and Solinus about that of Rome. All that we know with any degree of certainty, concerning the appellation of Scot, amounts to this-That it was at firft a term of reproach, and confequently framed by enemies, rather than alfumed by the nation diftinguifhed by that name. The Highlanders, who were the genuine defcendants of the ancient Scots, are abfolutely frangers to the name, and have been fo from the beginning of time. All thofe who fpeak the Gaelic language call themfelves Albanich or Gael, and their country Alba or Gaeldochl.

The Picts, who poffeffed originally the northern and eaftern,

3 oth m. caftern, and in a latter period alfo the more fouthern, divifion of Notth Britain, were at firf more powerful than the Caledonians of the weft. It is therefore probable, that the Picks, from a priaciple of malcvolence and pride, were ready to traduce and ridicule their weaker neighbours of Argylc. Thefe two mations fonke the fame l.inguage, the Gaclic. In that language Scot, or Scode, fignifies a corner or fmall divition of a country. Accordingly, a corner of North Britain is the very name which Giraldus Cambrenfis gives the little kingdom of Argyle, which the fix fons of Muredus king of Ulfer were faid, according to his information, to have erected in Scotland. Soot in Gaelic is much the fame with little or contemptible in Engli!n ; and Scotlar, literally fpeaking, fignities a fmall flock; metaphorically, it ftands for a fmall body of men. (Dr MacPherfon's 1ifiert.)

Others ohferve, that in the farme language the word Scuit fignifies a cuanderer, and fuppote that this may have been the origin of the name of Scot; a conjecture which they think is countenanced by a palfage in Am. mianus Marcellinus (1. axvii.), who chatacterizes the men by the epithet of roaming; "per diverfa vagantes." (Mr Macpluerfon, and Mr IVbitaker).

All that we can fay is, that for fome one of the reafons couched under the above difparaging epithets, their malicions or fneering neighbours, the Plas or the Britons, may have given the appellation of Scots to the anceftors of the Scottifh nation.

At what time the inhabitants of the weft of Scotland came to be difinguithed by this name is uncertain. Porphyrius the philoiopher is the firf who mentions them, about the year of the Chriftian cra 267 ; and towards the middle of the \(4^{\text {th }}\) century we find them mentioned with other Britifh nations by Am. Marcellinus, in the paffage above seferred to.
The origin of the Scots has been warmly difputed
And of the people.
by many antiquaries of note ; particularly by Mr Macpherfon and Mr Whitaker. The firft contends, that they are of Calcdunian, the litter, that they are of Irill extrastion. Each fupposts his pofition wi:h fuch arguments and authorities, that an impartial inquirer is almott at a lofs which of their copinions he ought to efpoufe. What appears mof probable is, that they are both partly in the righe and partly in the wron.r. -The Scots fecm to have been originally deficended from Britons of the fouth, or from Caledonians, wh: being pretfed forward by new colonies from Ganl, till they came to the weftern thore of Britain, paffed over from thence into Ircland, probably about 100 years befure the Chriftian era. About the year of Chrift 320, they returned again into britain; or at leaft a large colony of them, under the conduaf of Fergus, and fettled on the wettern coalls Caledonia, from whence they had formerly migrated. As early as the year \(3+0\), we find them affociated with the Pats in their cxpeditions to the Roman province; and for 90 or 100 years after, their ravages are frequently mentioned by the Roman and Britifh writers. Whitakis's lijl. of the Britons, 284).

The territory of the ancient Scots, before the anncr. ation of Pitavia, comprehended all that fide of Calcdonia which lies along the north and weftern ocean, from the fiith of Clyde to the Orkneys. Towards the ealt, their dominions were divided from the Pietifh
torritories by thofe high monntains which run from, Scotsre : Dumbarton to the frith of "Hoin. - In procets of time the Scots, under the reign of Kienneth the fon of Al. pin, became to powertul as to fubdue entirely their neighbours the l'ikts, and gave their own denomination to all Calcdonia, P'ictavia, and Valenti.u; all which ate flill comprelended under the general name of Siolind.

Like thofe of all other mations, the hiftorians of Scot. land affume ton great an antiquity for their countrymen ; however, they are much lefs extravagant in this refpef than many others. By them the reign of Fer- pergus the gus, the firf Scots moarch, is placed in 330 B. C. firn king on H: was the fun of Ferchard an Irith prince; and is Scotland. faid to have been called into Scotland by the Caleds. nians, to allilt them againft the fouthern Britons, with whom they were then at war. Having landed on ons of the REbudx or weftern ifles, lac haj a conference with the Caledonians, whofe language and manners he found to be the fame with thofe of his countrynic:. Having then landed in Scotland, and taken the field at the head of his new allics, he engaged the Britors under their king Coilus. Viftory declared in favour of the Scots; Coilus was defeated and killed; and frum him the province of Kyle firt received its mame. After this Fergus was declared king of the Scots, with the folemnity of an oath. But he did not long enjoy his new dignity : for having been recalled to Ireland to quict fome commotions thicre, he was drowned, by a fudden tempent, on his r.turn, at a place in Ireland called from him Kinock-Fergus, or Carvick-Fergus; i. e. Fergus's Rock.
Fergus was fucceeded by his brother Feritharis, to the prcjudice of his (wo fons Ferlegus and Mainus. This, we are told by the ancient Scottifh writers, was done in conformity to a law, by which it was ordained, that whilft the children of their kings were infants, one of their relations who was reckened the moft fit for the government hould be riciled to the throne, but that after his death thie fovereignty thould return to the fons of the former king. This was the cafe at prefent; however, Ferlegus, impatient for the crown, made a formal demand of it from his uncle. 'The difpute being referred to an affembly of the fates, Feritharis was confirmed oat the threne; and Ferlegns would have been condemaed for fedition, had no: his uncle interpofed. However, he was imprifoned; but havine? made his efcape, he lled firt to the licts, and their to the Britons, in order to excite them againft Feritharis. With both he failed in accomplifaing his purpore: but, in the mean time, his uncle being quabbed in his bed, the fufpicion fell upon Ferlegus, who was thercupon fet afide from the fuccetfion, and died inob. fcurity, the throne being conferred upon his brot!.cr Mainus.

The reigns of Mainus, Dornadill, and Nohat, alford nothing remarkable, excepting that Doraadill, who wis a great hanter, inflituted the laws of hunting in has country. Nothat was killed in a batte with Rember his nephew; upon which the latter w.is immedintery invelted with the fovereignts. A bloudy war enficed, in which both parties were reduced to the lan citremity, and ghad at length to conclude a peace. The fise of Renther is no: known; but it is generally fupnored that he ended his life in the year \(18_{7} \mathrm{~B} . \mathrm{C}\).

The reigns of Reuta, Thereus, Jalina, and Finnan,
afford

Somband. afford no remarkable tranfactions, excepting that un. der the laft we find the firlt beginnings of the Scottith parliament; as he enacted, that kings fhould do nothing without the confent of their grand council. After him followed Durlus, Even, and Gillus, whofe reigns affurd nothing of confequence. Even II. the nephew of Finnan, who fucceeded Gillus, is faid to have built the towns of Innerlochy and Invernefs. He overcame Belus king of the Orhneys, who had invaded Scotland; and was fucceeded by his fon Eder, in whofe time Julius Cafar invaded the fouthern parts of Britain. Eder is faid to lave allited the Britons againft the common cnemy. He was fucceeded, after a reign of \(4^{8}\) years, by his fon Even 1II. who is reprefented as a monller of cruelty and luift. Not content with having 100 noble concubines of his own, he
6 made a law that a man might marry as many wives A fcandal- as he could maiutain; and that the king fhould have the ous law concerning marriages. firlt night with every noble bride, and the mobles the like with the daughters of their tenants. Nor was he lefs remarkable for his cruelty and rapaciouinefs, which at laft occafioned a rebellion; and Even was dethroned, imprifoned, and put to death.

We meet with nothing memorable in the hiftory of Scoth ind from this time to that of Agricola, excepting that the famous Caractacus, who was carried pritoner to Rome, is faid to have been one of the Scottilh monarchs; which, however, feems not very probable, as the Romans in his time had not penetrated near fo far as Scotland. The invalion of Agricola happened during the reign of C ribred, called by the Ronian hiltorians Galgacus. Agricola having completed the conqueft of the fou hern parts, and in a great meafure civilized the inhabitants, lormed a like plan with regard to Scotland. It is probable, that at this time the

Caledonians or Sc ts were rendered more formidable than ever they had been, by the atcellion of great numbers from the fouth; for though the Romans had civilized the greatelt part, it cannot be doubted that many of thofe favage warriors, dildaining the pleafures of a peaceable life, wnuld retire to the northward, where the mastial difpolition of the Scots would better fuit their inclirati \(n\). The utmolt efforts of valour, however, were not prorf againt the difcipline or the Ruman tronps, and the experience of their commarder. In the third year Agricola had penetrated as far as the river Tay; but the particulans of his progrefs are not recorded. The following year he built a line of forts between the friths of Forth and Clyde, to exclude the Calcuonians from the fouthern parts of the inland; and the year after, he fubdued thofe parts which lay to the fouch and weft of his forts, namely, the counties of Galloway, Cantyre, and Argyle, which at that time were inhabited by a people called Cangi, thongh fome hiforians place thefe as far fouth as Cheflire in England, and the worth part of Wales. This fuppofition, however, can fcarcely be ddmitted, when we confuder that T'acitus exprefsly infurms us, that the people whom Agricola conquered had never before been known to the Romans.

Agricola fill purfued the fame pradent meafures by which he had already fecured the polfeflion of fuch a large tract of country, that is, advancing but tlowly, and building forts as he advanced, in order to keep the feople in obediencc. The Scots, though commanded
by their king, who is faid to have been well acquainted with the manner of fighting and difcipline of the Rominns, were yet obliged to retreat; but at laft, finding that the enemy made fuch progzefs as endangered the fubjugation of the whole country, he refolved to cut off their communication with the fouthern parts, and likewife to prevent all poffibility of a retreat by fea. Agricola, though folicited by lome of his officers, refured to retreat; but divided his troops into three bodies, having a communication with each other. Upon this, Galgacus refolved to attack the weakert of he three, which confited only of the ninth legion, and lay at that time, as is faid, at a place called Lochore, about two miles frum Loch-Leven in Fife. The at. tack was made in the night: and as the Komans were both unprepared and inferior in number, the Scots penetrated into the licart of their camp, and were making a great flaughter, when Agricola detached fome light-armad troops to their alliftance; by whom the Caledonians in their turn were routed, and forced to fly to the marlhes and inaccefible places, where the enemy could not follow them.

This engagement has been magnified by the Roman hiftorians into a victory, though it can icarce be admitted from the teltimonies of other hiftoriaus. The Romans, however, ccrtainly advanced very confiderably, and the Scots as confantly retreated, till they Great viccame to the foot of the Grampidn mountains, where tory yained the Caledonians refolved to make their latt fand. In ly the Ro= the eiglith year of the war, Agricola advanced to the mans. foot of the mountains, whese he found the enemy rcady to receive him. Tacitus has given us a fpeech of Galgacus, which he has undoubtedly fabricated for him, in which he fets forth the alpiring difpofition of the Romans, and encourages his countrymen to defend themelves vigorouly, as kuowing that every thing valuable was at itake. A defperate engagement acsordingly enfued. In the beginaing, the Britons had the advantage, by the dexterons management of their bucklers: but A fricola having ordered three Tungrian and two Batavian cohorts, armed with fhort twords, and emboffed bucklers terminating in a point, to attack the Scots, who were armed with long fwords, the latter foon found thefe weapuns ufeleis in a clofe encounter ; and as their bucklers only covered a fmall part of therr bodies, they were ealily cut in pieces by their adverfaties. The mon forward of their cavalry and charioteers fell back upon their infantry, and difordered the centre: but, the Britons endeavouring to out-flank their enemies, the Roman general oppofed them with his horfe; and the Caledonians were at laft routed with grcat flaughter, and forced to fy into the woods, whither the Romans purfued with fo little calution, that numbers of them were cut off. Agricola, however, having ordered his troops to proceed more regularly, prevented the Scots from attacking and cutting off his men in feparate parties, as they had expected ; fo that this vietory proved the greatelt Itroke to the Caledonians that they had hitherto received. This battle is fuppofed by fome to have been fought in Strathern, half a mile fouth from the kirk of Comrie; but others imagine the place to have been near FortingalCamp, a place fomewhat farther on the other fide of the Tay.

Great as this victory was, it fecms not to have been
pro.

scotland.

scotland.produstive of any folid or lafting advantage to the Romans; fiuce we find that Agricola, inftead of patting an end to the war by the immediate ennqueft of ail Caledonia, retreated into the country of the Forent, commonly fuppofed to be Furfarthire, though others imagine is to have been the county of Fife. Here he received hoftaçes from part of the Caledonians; and ordered purt of his, theet to fail round Bitain, that they might difcover whether it was an ifland or a continent. Thie Romans no fooner had leit that part of the country, than the Calcdomans demolithed all the fres they had raifed: and Agricola being foon after recalled by Domitian, the further progretsot the Ruman arms was thopped; Galgacus priving fupetior to any of the fuccelfors of that general.

From the time of Agricola to that of Adrian, we know little of the affais of Scotland, excepting that during this interval the Scots mult have entirely driven the Romans out of their country, and reconquered all that traot which lay between Agricola's chain of forts and Carlifle on the weft, and Newcafte or Tinmouth Bar on the ealt; which Adrian, on viliting Britain,峟 Roman dominions. Here he built a wall of turf between the mouth of the Tine and the Solway frith, with a view to fhent out the barbarians; which, however, did not anfiwer the purpofe, nor indeed could it be thought to do io, as it was only built of turf, and guarded by no more than 18,000 men, who could not be fuppofed a fufficient force to defend fuch an extent of fortification.

On the depatture of Adrian, he left Julius Severus as his lieutenant: but this man though one of the greatelt commanders of his age, did not carry his arms to the northwand of Adrian's wall ; and this long interval of peatce gave fo much fecurity to Mogold the Scotifh monareh, that he degenerated into a tyrant, and was murdered by fome of his noblemen. The only inflance of his ty ranny which is produced, however, is a law by which it was enacted, that the eltates of fuch as were condemned flould be forteited to his exchequer, with out any part thereof being allotted to their wives and children; an aft which fubfifts almoft in its full torce to this day in Gicat Britain and the belt regulated Eltropean guvernment .

In the reign of Antoninus, Pius, the proprator Lol. lius Urbius drove the Scot, far to the northward, and repaired the chain of forts built by Agricola, which lay between the Carron in the frith of Forth and Dunglais on the Clyde. 'Thefe were joined together by turf walls, and formed a much better defence than the wall of Adrian. However, atiter the death of Antoninus, Commodus having recalled Calpurnius Agricola, an able commander, who kept the Scots in atwe, a more dangerous war broke out than had ever been experienced by the Romans in that quarter. The Seots having paffed the wall, put all the Romans they could meet with to the fword: but they were fonn repulfed by Ulpius Marcellus, a general of enfummate abilities, whom Commndus tent into the iflind.-In a fhort time the tyrant alf, recalled this able cummander. After his departure, the Roman difcipline in Britain fuffered a total relaxation; the foldiery grew mutinous, and great diforders enfued: hut thefe were all happily removed by the arrival of Clodiss Alhinus, a perfon
of great fkill and experience in military affairs. His prefence for fome time refleained the Scots within proper bounds: but a civil war breaking out between him and Severas, Albinus croffed over to the continent with the greatell part of the Roman forces in Britain; and meeting his antagonift at Lyons, a dreadful battle culued, in which Allinus was utterly defeated, and his army cut in pieces. See Rome, no 375 .

The abrence of the Roman forees gave encourage. ment to the Scots to renew their depredatione, which they did with fuch fuccef, that the emperor became apprehenfive of lofing the whole ifland; on which hs determined to go in perfon and quell thefe troublefunie enemies. The army he collected upon this occafion was far more numerous than any the Romans had evat fert into Britain; and being commanded by fuch a" able general as Severus, it may eafily be fuppofed that the Scots mutt have been very hard preffed. The par ticulars of this important expedition are very implifeetly related; bowever, we are affured that Severulof a valt number of men, it is faid not lefs tha:50,000, i: his march through Scotland. NotwithItanding, he penetrated, it is faid, to the moft northern extremity of the ifland, and obliged the enemy tw yield up their arms. On his return, ha buile a much: Atronger fortification to fecure the frortiers againft th. enemy than had ever been done befors, and which in forme places coincided with Adrian's wall, but e.:tended farther at each end. But in the mean time, t1. : Scots, provoied by the brutality of the emperce's for Caracalla, whom he bad left regent in his abfence. again took arms: on which Severus himfelf took the field, with a defign, as it would feem, to extispate the whole nation ; for he gave orders to his foldicrs " not to fpare even the child in the mother's beliy." The event of his furious declaration is unknown: but in all probability the death of the emperor, which happened foon after, put a Itop to the execution of this revenge; and it is certain that his fon Caracalla, who fuceceded Severus, ratified the peace with the Scots.

During ali thefe important tranfactions, Seotland was governed by Donald I. who is faid to have been the firf Chrillian king of this country. From him to the time of Eugene I. no remarkable occurrence offers: but under the latter, the Roman and lizifh forces were united againd the Scots. The Piets were commanded by their Ling, named Hargul ; and the Romans by Maximas, who mudered Valentinian [1I. and aiterwads aflumed the empire j. The allics defented Eugene in the county of Gallowar; but infosimus being obliged to return fouthward on account of an infurrection, the Pias were in their turn defeated by the Soots Next year, however, Aximus marched againat the kome, no Scots; who being now reduced to extremity; bronglit sje into the field not only all the men capable of beating arms, but the women alfo. In this enfigement the Piots would have been ntterly defeated, had not they been fupported by the Remans; but Eugere heing killed, with the greatelt part of his nobility, the Scots were defeatec'; and fo weil did the conquerors improve their vifory, that their antagonifts were at hat totally driven out of the culuntry. Some of then took refuge in the Sibudx inlands, and fome in Scandinavi.t and Ireland, fram whence they made frequent decents upon Soctaid. The liats were as fort migh:ily pleafed

10

\section*{S C O} fuccets, the Britons were obliged to call in the Saxons to their alfitance. By thefe new allies the Scots were defeated in a great battle, and their kirg (Eugene) drowned in the river Humber; which put a flop for fome time to thefe incurlions.

Hitherto we have feen the Scots very formidable e.2emies to the fouthern Britons. But when the Saxons became the enemies of the Britons, the Scots joined in a frict alliance with the latter; and the famous king Aithur is faid to have been affifted by the Scots in all his battles with the Saxons: neither does it appear that this league was ever diffolved again, though the united efforts of the Scots and Britons were not fulficient to preferve the independency of the latter.

The next semarkable event in the hiftory of Scotland
century. The occafion of the quarrel was, that Dongal king of Scotland pretended a right to the Pictifh throne; which, however, was rejected by the Picts: upon which loth parties had rccourfe to arms; but when every thing was ready for the campdign, Dongal was drownad in croffing the river Spey.

At this time the dominions of the Sents comprelonded the wettern illands, tngether with the counties of Argyle, Knapdate, Kyle, Kintyre, Lochaber, and a part of Breadalbane; while the Picts poffeffed all the reft of Scotland, and part of Northumberland; to that the Picts feem to have been by much the moft powerful people of the two. However, the Scots appear to have been fuperior in military fkill; for Al. pin, the fuccelfor of Dongal, having engaged the Pictith army near Forfar, after an obtlinate engagement defeated them, and killed their king, though not with:ont the lofs of a great number of his own men. The Pucts chofe Bradus, the fon of their former king, to fucceed him; but foon after depofed and put him to death, on account of his flupidity and indolence. His brother Kenath fhared the fame fate on account of his cowardice ; till at laft another Brudus, a brave and fpirited prince, afecnded the throne. Having raifed a powerful army, he began with offering terms of peace to the Scots; which, however, Alpin rejefted, and infifted upon a total furrender of his crww. Brudus on this endeavoured to procure the affiftance of Edwin
king of Northumberland. Edwin accepted the money; Scotland. but preiending to be engaged in cther wars, he refurcd the affillance which he at firlt promifed. Brudus, not difmayed by this difappoimenent, marched refolutely agrainlt his cnemies; and the two armies came to an engagement near Dundee. The fuperior fkill of the Scots in military affairs was about to have decided the viftory in their favour, when Brudus bethought himfelf of the following Atratagem to preferve his army from deltruction. He caufed all the attendants, and even the women who attended his army, to affemble and fhow themfelves at a diftance as a powerful reinforcement coming to the Picts. This Atruck the Scots with fuch a panic, that all the efforts of Alpin could not recover them; and they were accordingly defeated with great ीaughter. Alpin himelf was taken prifoner, and foon after beheaded by order of the conqueror. This execution happened at a place now called Pit-alpy, but in former times Bus-alpin, which in the Gaelic language fignifies the death of Alpin. His head was afterwards ftuck upon a pole, and expofed on a wall.

Alpin was fucceeded by his fon Kenneth II. who being a brave and enterprifing prince, refolved to take a moft fevere revenge for his father's death. The Scots, however, were fo difpirited by their late defeat, that they werc exceedingly averfe to any renewal of the war: while, on the other hand, the Piets weee fo much elated, that they made a law by which it became death for any man to propofe peace with the Scots, whom they refolved to exterminate; and fome of the nobility were expelled the council on account cf their oppofition to this law. The confequence of this was, that civil diflenfions took place among them, and a bloody battle was fought between the oppolite parties, before the Scots had thought of making any further refiftance.

By thefe diltrations Brudus, who had in vain endeavoured to appeafe them, was fo much affected, that he died of grief; and was fucceeded by his brother Druken.-The new prince alfo failed in his endeavours to accommodate the civil differences; fo that the Scots, by gaining fo much refpite, at laft began to recover from their conlernation; and fome of them baving ventured into the Pictifh territorics, carried off Alpin's head from the capit: 1 of their dominions, fuppofed to have been Abernethy. In the mean time, Kemeth found means to gain over the nobility to his fide by the following fratagem; which, however ridiculous, is not incredible, it we confider the barbarifm and fuperftition of that age. Having invited them to Stratagem an entertainment, the king introduced into the hall of Kenaeth where they flept a perfon clothed in a robe made of to renew the fkins of fifhes, which made fuch a luminuns appearance in the dark, that he was mittaken for an angel or fome fupernatural melfenger. Tu add to the terror of thofe who faw him, he denounced, through a fpeaking trumpet, the moft terrible judgments, if war was not immediately declared againtt the Pifts, the murderers of the late king. In confequence of this celeftial admonition, war was immediately renewed with great vigour. The Picts were not deficient in their preparatiuns, and had now procured fume affitance from England. The firt battle was fought near Stirling ; where the Picts, being deterted by their Englifh auxiliaries, were utterly defeated. Drufken efcaped by the fwift-

Scotland. nefs of his horfe, and a few days after made application to Kenneth for a ceffation of hoflilities; but as the Scotifh monarch demanded a furrender of all the Pictifh dominions, the treaty was inftantly broken off. Kenneth purfued his good fortune, and conquered the counties of Merns, Angus, and Fife: but as he marched againt Stitling, he received intelligence that thefe coun ies had again revolted, and cut off all the garrifons which he had left, and that Drutken was at the head of a cunfidcrable army in thefe parts. On this Kenneth haftened to oppofe him, and a negociation again took place. The retult was equally unfavourable with the reft. Kenncth infifted on an abolute furrender of the counties of Fife, Merns, and Angus; which being refufed, both parties prepared for a decilive battle. The engagement was very blondy and defperate, the Piats fighting like men in defpair. Drukken renewed the battle feven times; but at laft was entirely defeated and killed, and the counties in difpute became the immediate property of the concjueror.

Kenneth did not fail to improve his viatory, by reducing the reft of the Pictill territories; which he is faid to have done with the greatell cruelty, and even to have totally exterminted the inhabitants. The capital, called Camelon (fuppofed to have been Abernethy), held out four months; but was at lall taken by furprife, and every living creature deftroyed. This was followed by the reduction of the Maiden Caltle, now that of Edinburgh; which was abonjoned by the garrifon, who ted to to Northumberland.

After the redution of the fe important places, the relt of the country made no great refifance, and Kenneth became mafter of all the kingdom of Scotland in the prefent extent of the word; fo that he is juitly to be elfeemed the true founder of the Scotith monarchy. Belides this war with the Piats, F -meth is faid to have been fuccefstul againt the Saxons, though of thefe wars we have very little account. Having reigned 16 ycars in paace atier his fubjugation of the Pitts, and compof:d a a de of laws for the good of his people, Kenneth died of a fifula, at Fort Teviot, near Duplin in Perthfhre. Before his time the feat of the Scots government had been in Argylefhire; but the removed it to Scone, by transferring thither the f.umous blat-k trone fuppofed to be the palla lium of Scotland, and which was alterwards carried off by Edward 1. of England, and lodged in Weftminter abbey.

Kenneth was fucceeded by his brother Donald, who is reprefented as a man of the worlt charıleter; in that the remaining Piats who had fled out of Scotland were encouraged to apply to the Saxons for allitance, promifing to make Scotland tributary to the Sason power afier it fhnuld be conquered. This propolal was accepied; and the confederates invaded Scotland with a powerful army, and to \(k\) the town of Berwick; however, they were foon after defeated by Donald, who took alfo their fhips and provilions. This capture proved their ruin; for fome of the thips being louden with wine, the Scots indulged themielves fo much w.th that liquor, that they bec.me incapable of defending themelves; the conlequence of this was, that the confederates rallying thear troops, attacked them in that ftatc of intoxication. The Scots were defeated with exceffive flaughter. Twenty thoufand of the common foldiers lay dead on the foot ; the king and his princi-
pal nobility were taken prifoners ; and all the country *osoland. from the 'Tweed to the Forth became the property of the conquerors. Still, however, the confederates found themfelves unable to purfue their vifory farther ; and a peace was concluded, on condition that the Saxons Thould become matters of all the conquered country. Thus the Forth and Clyde became the fouthern boun. darics of the Scottifh domininns. It was agreed that the Forth fhould from that time forward be called the Scots fea; and it was made capital for any Scosman to fit his foot on Englifh ground. They wcre to cref no forts near the Englilh confines, to pay an annual tribute of a thoufand pounds, and to give up 60 of the fons of their chief nobility as linflages. i mint was crećtcal by the Saxon prince named Ofareth, at Siilling ; and a crofs raifed on the bridge at that place, with the filllowing infcription, implying that this place was t!: boundary between Scotland and England:

\section*{Anglos a Scotis feparat crux inar renctis: \\ Arma hici fant Bruti, fant Scoti fub bac cruce tatio.}

After the conclufion of this treaty, fo humiliating to the Scots, tbe Pints, findiag that their interef has been entirely neglected, fled to Norway, while thofe who remained in England were mallacred. Donald fhared the common fate of unfortunate princes, bein:s dethroned and fhut up in prifon, where he at laft pur an end to hi, own life in the year 853 . -In jultice to this unhappy monarch, however, it mult be obferved, that the character of Donald, and indeed the whole account of thefe tranfactions, refls on the credit of a fingle author, namely Buece; and that other writers repretent Donald as a hero, and fuccefsful in his wars: but th: obfcurity in which the whole of this period of Scuttith hifory is involved, renders it impofitle to derermine any: thing fatiefatory concerning thefe matiers.

Donald was fucceeded by his nephew Confantine, the fon of Kenneth Mac Alpin, in whofe re gn Scotland was firft invaded by the 1 ).nes, who proved fuch formidable enemies to the Englith. This invalion is faid to hwe been occaficned by fome exiled Piets who fled to Denmark, where they prevanled upon the king of that country to fend his two br thers, Hungar and Hubba, to recover the Pistill dominions frum Conthantine. Thete princes landed un the coalt of Fi:e, Andsy where they commanted the mult horrid babasities, not the Disics. faring eien the sculefiatios who had tuten rcluge in the illad of May at the mouth of the Forth. Conftmtine defeated one of the Danith armies commanded by Hubba, near the wither of Leven; but was himelf deleated and taken prifoner by Hungar, who caufed him to be belicuded it a place tince called the Devil's Cave, in the year 8.4.
This unfortunate action coft the \(S\)-ots 10,00 men : but the Danes fuem not to have purchated their sion ay very calily, as they w-re obl: ged immed iclyatecrwards to abandon their conquel:s, and rctire to their num courtry. However, the many D.mih momoments il iare faill to be icen ia Fife, leave no ram in dembe that many bloojy icenes have been ARed hore betwenthe Scots a d Danes belides that abowenertiored.

Conftantine was fucceeded by his brati or Fth. Girmnamed the Sevifr-fored, from lus agylity. Concerning him we find nothing memorable; indeed the accourt are fo confuced and conitadionsy, that it is inip twll.
S. Th. 3. to turn my decinive opinion concening the tranfations \(\sim \sim\) of thio reign. All agree, however, that it was but lhort; and that he wis fucceeded by Gregory the fon of Dong. 1, contemporary with Alfred of Eighand, and 19 that buth princes defervedl; acquired the name of Grest.
Fiphoits of The Danes at their departure had left the Picts in poimarched, and quickly drove them into the north of

England, where their confederates were already mafters of Northumberland and York. In their way thither they threw a garrifon into the town of Berwick; but thi, was prefently reduced by Gregory, who put to the fword all the Danes, but ipared the lives of the Pitts. Froas Berwick, Gregory purfued the Dancs into Northumberland, where he defeated them; and pafled the winter in Berwick. He then marched againft the Cumbridns, who bcing mofly Picts were in alliance with the Danes. Them he eatily overcame, and obliged to yield up all the lands they had formerly poffefled Lclonging to the Scots, at the fame time that be agreed to prutect them from the power of the Danes. In a fhort time, however, Conftintine the Ling of the Cumbrians riolated the convention he had made, and invaded Amandale; but was defeated and killed by Gregory ne.r Lochmaben. After this vittory Gregory entirely reduced the counties of Cumberland and Weftmoreland, which, it is faid, were ceded to him by Alfred the Great ; ard indeed the lituation of Alfred's affairs at this time renders luch a cellion by no means impro. Lable.

We next find Gregory engaged in a war with the Irilh, to fupport Donach, an Irifh prince, againit two rebellious noblemen. The lifh were the firt aggreillors, and invaded Galloway; but being repulwiu with great lofs, Gregory went over to Ireland in perfon, where the two chieftains, who had been enetmies to each other before, now joined their forces inl order to eppofe the common enemy. The firt engragemert pured fatal to one of their chicfs named Briar, who was killed with a great number of his followers. After this victory Gregory reduced Dundalk and Droghed. On his way to Dublin he was oppofed by a chieftain named Corneil, who dhared the fate of his confcderate, being alfo killed, and his army entirely iefeated. Gregory then became guardian to the young prince whom he came to affift, appointed a regency, and abliged them to fuear that they would never admit into the country either a Dane or an Englithman without his confent. Havirg then placed garrifons in the titrongeft fortreffes, he seturned to Scotiand, where he built the city of Aberdeen; and died in the year 892, Confartine, who imitated the virtues of his predeceffor. The Scots hittorians unanimouny agrec that Northumberland was at that time in the hands of their cuntrymen; while the Englifh as unaninoufly affirm that it was fubjeet to the Danes, who paid tomage to Alfied. lie this as it will, however, Donald continued to live on good terms with the Engliih monarch, and fent him a body of forces, who proved of confiderable advamtage to him in his wars with the Dane. The reign of Donald wus but fhort; for having marched againt fome ioblacrs (probathly no other than the 1)anes) whe had invacicd in I ravaged the countics of

Mifrray and Rofs, he died at Forres foon after, having defcated and fubdued them in the year 903 . He was fucceeded by Conttantine 1II. the fon of Eth the Swittfooted, cuncerniag whom the molt remarkable particular we find related is his entering into an alliance with the Danes againft the Englifh. The occation of this confederacy is faid to have been, that the Eng Conflanlith monarch, Edward the Elder, funding the Scors ters inte in monarch, Leward the Elder, finding the scots ters inte an in poffeffion of the northern counties of England, made alliance fuch eatravargant demands upon Conftantine as obli- Wath the ged lim 10 ally with the Danes in order to preferve againes his dominions in fecurity. However, the league fub- England, difted only for two years, after which the Danes found it more for their advantage to refume their ancient friendihip with the Engliih.

As foon as Conftantine had concluded the treaty with the Danes, he appointed the pretumptive heir to the Scottith crown, Malcolm, or, according to fome, Eugene the fon of the Jate king Donald, pruce of the louthern counties, on condition of Lis detending them againlt the attacks of the Englifh. The young priace had foon an opportunity of exerting his valour: but not behaving with the requilite caution, he had the misfortune to be defeated, with the lofs of almolt all his army, he himfelf being carried wounded out of the field; and in confequence of this difalter, Conftantine was obliged to do homage to Edward for the pelfeffions he had to the fouthward of the Scots boundary:

In the beginning of the reign of Athelftan the fon of Edward the Edder, the northern Danes were encouraged by fome confpiracies formed againf that monarch to throw off the yoke; and their fuccefs was fuch, that Athelfan thought proper to enter into a treaty with Sithric the Danith chief, and to give him his caughter in mariage. Sithric, however, did not long furvive his nuptials; and his fon Guthred, endeavouring to throw off the Englith yoke, was defeated, and obliged to fly into Scotland. This brought on a feries of hoftilities between the Scots and Eaglith, which in the year \(93^{8}\) iffied in a general engagement. At this time the Swots, Irih, Cumbrians, and Danes, were contederated aganat the Englith. The Scots were commanded by their king Conitantine, the Irifh by Anlat the brother of Guthred the Danith prince, the Cumbrians by their own fuvereign, and the Danes by Froda. The generals of Athelitin were Edmund his brother, and 'urketil his favourite. The Englith attacked the entrencliments of the confederates, where the chief refiftance they met with was from the Scots. Cunitantine was in the umoft danger of bcing killicd or taken pritioner, but was refcued by the bravery of his foldiers: however, after a moit obflinate enragement, is itterly the confederates were defeated with fuch flaughter, that defeated by解 the lainala the con- lifh. fequence of this viotory was, that the Scots were deprived of all their poffeffons to the fonthward of the Forth ; and Contantine, quite difpirited with his misfirtune, scligned the crown to Malcolm, and retired to the monaltery of the Culdees at St Andrew's, where he died five years after, in \(9+3\).

The dittrefies which the Englifh fuftained in their fubiequent wars with the Danes gave the Scots an opportumby of retieving their affairs; and in the year 944, we find Malcolm, the fucceffor of Conftantine, invelted with the fovereignty of Northumberland, on condition

dition of his lolding it as fief of the croven of England, and anifting in detence of the nonhlern border. Soon after the conctufion of this treaty Malcesin died, and was fiucceeded by his fion Indulfus. In his reign the Danes became extremely formidable by their invalionse, which they now rencived with gre:ter fury than ever, being exalperated by the friendillip fubtifing between the Scots and Englith monarchs. Their firft defient was upon Eait Lothian, wherc they were foon expelled, but crolfied over to Fife. Here they were a fecond time de. ficated, and driven out ; and fo well had Indulfus taken care to guard the coalts, that they could not find an opportunity of landing; till having feemed to fleer twwards their own country, the Scots were thrown off their guard, and the Danes on a fudden made good their lansting at Cullen, in Banffhire. Here Indultius foon came up with them, attacked their camp, and drove them towards their hips, but was killed in all ambufcade, into which he fell during the purfiuit. He was fucceeded by Duffus, to whon hiflorians give an excelLint character; but, after a ecig: of five years, he wals murdered in the year 965 . Hic was fucceceded by Cullen the fon of Indultus, who had been nominated prince of Cumberiand in his father's lifetime, as heir-apparent to the thronc. Hie is reprefented as a very degenerate prince ; and is faid to have given hinffeif up to fenfuality in a manner almoft incredible, bcing guilty of incontincnce not only with women of all ranks, but even with his own lizers and daughters. The people in the mean time were fleceed, in order to fupport the extravagance and luxury of their prince. In confequence of this, an autembly of the ftates was convened at Scone for the refettling of the government; but on his way thither Culen was affatinated, near the village of Melhven, by Rolrard, thane or theriff of life, whofe d.ughter the king had debauclied.

The provocations which Culcn had given to his nobility feem to have rendered them totally untrafable and licentious; which gave an oecation to a remarkable revolution in the reign of Kenneth 1II. who farccescd Culen. This prince, being a man of great refolution, began with relieving the common perple fiom the oppreffions of the nobility, which were now intolerable; and this plan he purfucd with fo mucl fuccects, that having nothing to fear from the great harons, lie ordered them to appear before him at L.merk; but the grenteclt part, conicions of their demerits, did not attend. The king fo well diffembled his difpleafure, that thofe who canne were quite charmed with his affability, and the noble entertainment he gave them ; in confequence of which, when an affembly was called next year, the guilty were encomaged to appear as well as the inmocent. No fooner had this allembly met, how ever, than the place of meeting wes belet with armed nee.. The king then inf rmed them that none had any thing to apprechend excepting fuch as had becn netorious of. fenders; and thefe he ordered to bee immediately taken into cultody, telling them, that their fubmitting to public juftice mult be the price of their liberty. They were obliged to accept the king's ofier, and the crinimals were accoodingly punithed according to their defiers.
About this time Edgar, king of England, finding himefelf hard prefled by the Danes, found means to unite the king of Scolland and the prince of CumberVol. XVI.

land along wish limfelf in at treaty againn the Danes; which give nceafion to a report that lienecth had be. cone tributary to the hive of Eres'and. '1"his, l:owever, is uttelly denied by all the Scuts liforians; who affum that Kerneth culivated a good correfiondence with Fdgar, as well becaufe he crpe?ed amitance in deficnling his coatts, as becaufe he intended entirely 10 alter the mode of lisceffion to the throne. About this tine the Danes made a dreadinl invafien. Their crigiral intention deems to have been to land on forse part of the Englith coralls; but finding them probably too well guarded, lley landed at Montrofe in Sicetland, ecinmithing everywhere the molt dreadful ravatges. Kenneth it that time was at Stisling, and quite unprepared; linwever, laving collested an hindiul of troops, he cut off many of the enemy as they were fraggling upand down, biti could n't prevent them from belieging Perth. Neverthelefs, as the king's army confantly increafed, he refolved in give the enemy battle. The feenc of this action was at Loncarty, near Perth. The king is faid to have offered ten pounds in filver, or the value of it in land, for the head of cvery Dane which thould be brought him ; and an inmunity from all taxes to the foldiers who ferved in his army, provided they fhould be victorious: but, notwithfanding the utmolt thefeatsthe efforts of the Scots, their enemies fought fo defperate- Danes. ly, that Kenneth's army mull have been totally defeated, had not the fugitives been flopped by a yeoman and his two fons of the name of Hay, who were coming up to the battle, armed with fuch ruftic weapons as their condition in life afforded. Buchanan and Boece inform us, that thele countrymen were plonghing in a field hard by the feene of attion, and perceiving that their countrymen fled, they loofed their nxent, and made ufe of the yokes as wapons, wih which they firt obliged their countrymen to ftand, and then amoyed their enemies. The fight was now rencwed with fuch fury on the part of the Scots, that the Danes were ut. terly defeaied; and, after the battle, the king rewarded Hay with the barony of Errol in the Cate of Gowric, ennobled his family, and gave them an armorial bearing alluding to the rultic weapons with which they had atclice ed this glorious exploit.

In the jear 904 , lienneth was murdered at the in- Kemucth figation of a laty named Fenill:, whofe fon the had murdered. canfed to be put to death. The murder wats perpetrated in Feneild's catle, where the had perfuaded the hing to pay her a vilit. Hisattendants wated long near the place; but being at length tired out, they broke open the doors, and found their hing murdered : upon which they laid the caftec in alhes; but Fencila cicaped by a pollern. The throne was then icized by an ulurper numed Confuntins; who, bsing killed in battle after a reign of a year and an l.alf, was fucceeded by Grime, the frasdion of king Duftus; and lie again wats defeated and killed by Malcolm the fon of Kenneth, the lawful her of the Scottifh throne. Afrer this viforv, however, Malcoln did not imnodiately aftume the fuvereignty: but atked the erown from the nobles, in ennfequence of a law patfed in the reimn of Kenncth, by which the fuccelfion to the throne of Scotland became hereditary. 'Plis they immediately granted, and Malcolm was acenrdingly crowned king. He joined limfelf in ftict alliance with the king of Englond; and proved fo fuccefoful againt the Danes in England, that \(+\%\)

Swero

Simblune.

Sweyn their king refolved to direot his whole force againt him by an invalion of Scotland. His firft attempt, however, proved very unfuccefiful; all his foldiers being cut in pieces, except fome few who efcaped to their flips, while the lofs of the Scots amounted to no more than 30 men. But in the mean time, Duncan, prince of Cumberland, having neglected to pay his domage to the King of England, the Latter invaded that country in conjunction with the Danes. Malcolm took the field drainit them, and defeated both; but while lee was thus employed in the fonth, a new army of Dares lancled in the north at the mouth of the river

\section*{The \({ }^{27}\) Scots} decicuted by the Danes, Spey. Malcoln advanced againt them with an army nuch inferior in number ; and his men, neglecting every thing but the bind impulfes of fury, were almof all cut to fieces; Malcolm himfelf being defperately wounded.

By this victory the Danes were fo much elated, that they fent for their wives and children, intending to fetthe in the country. The cafte of Nairn, at that time thought alonot impregnable, fell into their hands; and the tuwns of Elgin and Forres were abandoned both by their garrifons and inhabitants. The Scots were everywhere treated as a conquered people, and employed in the nolt firvile offices by the hanghty conquerors; who, to tender the cattle of Nain, as they thought, abolutely impregnable, cut through the fnall ifthmus which joined it to the land. All this time, however, Malcolm was raifing forces ia the fouthern counties; and having at latt got an army together, he came up with the Danes at Murtloch, ncar Balveny, which apfears at this day to have been aftrong Danifh fortification. Fere he attacked the enemy; but having the

\section*{then in a} ficond batile, misfortune to lofe three of his general officers, he was again obliged to retreat. However, the Danith general happening to be killed in the purfuit, the Scots were encouraged to renew the fight with fuch vigour, that they obtained at lafl a complete vifory ; but fuffered fo much, that they were unable to derive from it all the advantages which might otherwife have accrued.

On the news of this ill fuccefs, Sweyn ordered two flcets, one from England and another from Norway, to make a defcent upon Scotland, under the command of Camus, one of his molt renowned generals. The Dines a:tempted to land at the mouth of the Forth; but finding every place there well fortified, they were cbliged to move farther northward, and effected their purpofe at Redhead in the county of Angus. The cafle of Brechin was firft beficged; but meeting with a ftout refiltance there, they laid the town and church in albes. From thence they advanced to the village of Pambride, and encamped at a place called Karloddo.

Malcolm in the mean time was at hand with his army, and encamped at a place called Bur, in the neighbourhood of which both parties prepared to decide the fate of Scotland; for as Noray and the northern provinces The banes were already in the polfeffion of the Danes, it was evi-fested.
dent that a victory at this time muf put them in poffellion of the whole. The engagement was defperate, and fo bloody, that the rivulet which procceds from Loch Tay is faid to have had its water dyed with the blood of the flain; but at laft the Danes gave way and fled. There was at that time in the army of Malcolm, a young prince of the name of Keith (A). He purfued Camus; and having overtaken him, engaged and killed him ; but another Scots officer coming up at the fame time, difputed with Keith the glory of the action. While the difpute latted, Malcolnt came up; who fuffered them to decide it by fingle combit. In, this fecond combat Keith proved alfo victorious, and killed his antagonit. The dying perfon confeffed the juftice of Keih's claim ; and Malcolm dipping his finger in his blood marked the fhield of Keith with three froker, pronourcing the words Veritas vincit, "I'ruth overcomes," which has ever fince been the armorial bearing and motto of the family of Keith (в).

The thattered remains of the Danifh forces reached their mips; but being driven back by contrdy winds, and provifions becoming fcatce, they put alhore 500 men on the coalt of Buchan, to procure them fome food: but their communication with the thips being foon cut off, they fortified themfelves as well as they could, and made a defperate refiftance; but at latt were all put to the fword. The place where this maffacre happened is fill called Crudane; being probably an abbreviation of Cruor Daiarum, the blood of the Danes, a name impofed on it by the ecclefiaftics of thofe days.
Sweyn, not set difcouraged, fent his fon Canute, af- Ansethes terwards king of England, and one of the greatelt war- invafion. riors of that age, into Scotland, with an army more powerful than any that had yet appeared. Conute landed in Buchan; and, as the Scots were much weakened by fuch a long continued war, Malcolm thought proper to act on the defenfive. But the Scots, who now thought themfelves invincible, demanded to be led on to a general engagement. Malcolm complied with their defire, and a battle enfued; in which though neither party had much reafon to boalt of victory, the D.mes were fo much reduced, that they willingly concluded a peace on the following tems, viz. That the Pcaic conDanes thould immediately depart Scotland; that as cluded. long as Malcolm and Sweyn lived, neither of them fhould wage war with the other, or help each others encmies;
(a) This prince is faid to have commanded a colony of the Catti, a German nation who fettled in the northmolt part of Scotland, and from whom the county of Caithnefs takes its name.
(5) Mr Gordon, in his Itincrarium Septentrionale, obferves, that in all prubability the Scots gained two vistorics over the Danes on the prefent occation; one near the place called Karbo.ldo, already mentioned; and the wther at Aberlemno, four miles from Brechin. At both places there are monuments with rude fculpiures, erected noft probably in memory of a victory. That at Karboddo is called Camus's crofs; near which, fumewhat more than a century ago, a large fepulchre, fuppofed to be that of Camus, was difcovered. It confilted of four great fones; and had in it a huge ikeleton, luppofed to be that of the Danih prince. The fatal froke feemed to have been given him on the back part of the head; a confiderable portion of the fiull being cut away, probably by the froke of the fword.
soollans. and that the fietd in which the battle was fought thould be fot apart and confecrated for the burial of the dead. Theie Ripulations were punaually fulfilled by Maleolm, who buile in the neighbourhood a chapel dedieated to Olaus, the tutelar faint of thefe northern nations.

Aficr all thefe glorious exploits, and becoming the fecond legifator in the Scottifh nation, Maleolm is faid to have llained the later part of his reign with avarice
3.3 dered at the age of 80 years, after he had reigned above 30. 'This affalfination was perpetrated when he was on his way to Glamis. His own domeitics are fidid to bave been privy to the murder, and to have fled along with the confpirators; but in pafing the lake of Forfar on the ice, it gave way with them, and they were all drowned, their bodies being difcovered fome days after. The latier part of this account is confirned by the feuiptures upon fome fones crefted rear the fpot ; one of which is itill c.alled Maloom's gravefons; ; and all of them exhibit fome rude reprefentations of the

Malcolm was fucceeded, in the year 1034, by his grandion Duncin I. but he is faid to have had :mother grandfon, the famovs Macleth; though fome are of opinion that Macbeth was not the grandion of Malcolm, but of Feneila who murdered Kenneth III. The firt years of Doi can's reign were paffed in tranquallits, but domenic broils foon took place on the following occafion. liarquo, thane of Lochaber, and anceftor to the royal fanily of Stuart, aked then in the capacity of Reward to Duncan, by collecting his tents; but being very rigid in the execution of his office, he was wat. hid, robbed, and almoft murdered. Of this outrage B.inquo complained as foon as he recorered of his wounds and could appear at coust. The robbers were fummoned to furrender themfelves to juftice; but innead of obeying, they killed the meffenger. Macbeth reprefented this in fuch frong terms, that he was fent with an army to reduce the infurgents, who had already deftroged many of the king's friends. This commifion he performed with fueh fuccefs, that the rebel chief put an end to his own life; after which Macbeth fent his head to the king, and then proceeded with the utmoff feverity againit the infurgents, who were compofed of Irifhmen, Mlinders, and Highlanders.

This infurrestion was farcely quelled, when the Danes landed again in Fife; and Duncan put himfelf at the head of an army, having the thanes Macbeth and Banquo ferving under him. The Danes were commanded by Sweyn king of Norway, and eldeft fon of Canute. He proceeded with all the barbarity natural to his nation, putting to death men, women, and children who fell in his way. A battle was fought between the t:w nations near Culrofs, in which the Scots were defcated: but the Danes purehafed their vifory fo dear!y, that they could nct improve it ; and Duncan retieated to l'erth, while Macbeth was fent to raife more forces. In the mana time Sweyn luid fiege to P-rth, which wats defended by Duncan and Banquo. The 1) anes were fo much dittreficd for wint of provifions, that they at lan confented to treat of a peace, provided the prolling! ecellities of the army wore relieved. The Scots hiftorians intorm us, that this treaty was fet on foot in order to amufe Swe \({ }^{n}\), and gain time fer the

Aratagem which Duncan was preparing. This reas no other than a barbarous contrisance of infuling intox. cating herbs into the liquors that were fent along with the other provifions to the Danifl camp. Thefe fopo dife are rifics had their intended effect; and while the Danes were under their influence, Macbeth and Danquo broke into their camp, where they put all to the fwerd, and it was wilh difficulty that fome of Sweyn's attendants carricd him on board; and we are told that his wats the only thip of all the Heet that returned in Norway. It was not long, however, before a frelly body of Dinces handed at Kinghorn in the county of Fife: but hiey were entirely defeated by Macbeth and Manquo. Such of the Danes as efcaped fled to their thips ; but befr re they departed they obtained leave to bury their dead in Inchcolm, a finall illand lying in the Forth, where one of their monuments is dill to te feen.

Thus ended the formidable invations of the Danes; after which Durcan applied himfelf to the adminiltration of jultice, and the reformation of the manners of his fubjects. Macbeth, however, who had oitained great reputation by his fuccefs agaialt the Dines, began to firm ambitious defigns, and to afpire to the crown itfelf. The fables relating to his ufurpation are fo well known from the tragedy compufed by Shakefieare which bears the name of Mableth, that we hall nut take notice of them here; but only obferve, that Duncan at laft Duncan, not knowing he had fo dangerons an nurdered enemy near his perfon, whofe fchemes required to be watched, was murdered at Invernefs by Macbeth, who fucceeded him in the throne.

During the greatelt part of the rcign of the ufurper, Malcolm, the true heir to the crown of Scolland, kept clofe in his principality of Comberland, without any thoughts of afeending his father's thronc. Macbeth for fome time governed with moderation, but at lafl became a tyramt. Becoming jealous of Banquo, the moft powerful fubjeet in his dominions, he invited him to an entertainment, and caufed him to betreacheroully murdered. His fon Fleance was deftined to the fame fate, but efcaped to Wales. Aifter him Macduf, the thane of Fife, was the moft powerful perfon in Scotlind; for which reafon, Macbeth determined to deltroy him. On this Macdoff fled to France; and Macbech cruelly put to death his wife, and children who were yet infanti, and fequeftered his eftate. Maeduff vowed ic. venge, and encouraged Malcolm to attempt to dethrone the tyrant. Macbeth oppofed than with lis whale force; but being defe tted in a pitched battle, he took refuge in the mort inaccellible places of the Highlands, where he defended himfelf for two years; but in the man time Malcolm was acknowledged ling of Scotland, and crowned at Scone.

The war between Mrebeth and the new king eonti- And billed. nucd for two years after the coronation of the latter ; but at laft he was killed in a fally by Macduff. Hinwever the public diRurbances did \(n\) it and with his life. His followers elected one of his kinimen named L:thla:t, furnamed the ldi,f, t') fucceed hin! : bur he not belas able to withhand Malcolm, withdrew to the n-rth, where being parfued, he was killed at Eficy in Strathbogie, after a reign of four months.
Malcolm bsing now eltablithed on the throne, began with rewarding Macduff for his great fervices ; and conferred upon his family four extraordinary frivileges.

3cotiand. 1. That they fhould place the king in his chair of fate at the coronation. 2. That they thould lead the van of all the royal armies. 3. That they fhould have a regality within themfelves: and, 4 . That if any of Macduft's family thould happen to kill a nobleman unpremeditatcly, he thould pay 24 marks of filver, and, if a plebeian, 12. The king's next care was to reinftate in their fathers pollefions all the children who had been difinherited by the late tyrant; which he did in a convention of his nobles held at Forfar. In the time of Willian the conqueror, we find Macolm cngaged in a dangerous war with England, the occalion of which was as follows. On the death of Edward the Confeffor, Harold feized the throne of England, to the prejudice of Edgar Atheling the true heir to the crown. However, he created him earl of Oxford, and treated him with great refpect; but on the defeat and cleath of Harold, William difcovered fine jealoufy of Edgar. Soon after, William laving occafion to pay a vifit to his dominions in Normandy, he appointed Edgar to attend him, along with fome other noblemen whom he fufpected to be in his interelt; but on his return to England, le found the people fo much difaffected to his government, that he proceeded with great feverity, which obliged great numbers of his fubjects to take refuge in Cumberland and the fouthern parts of Malcolm's dom:nions. Edzar liad two fifters, Margaret and Chriftina : thefe, with his two chief friends, Gofpatric and Martefivin, foon made him fenfibie how precarious his life was under fuch a jealous tyrant, and perfuaded him to make preparations for flying into Hungary or fome foreign country. Edgar accordingly fet fail with his
42.

Entertains Edgar an Englifh prince. mother Agatha, his two fifters, and a great train of Anglo Saxon noblemen; but by flefs of weather was forced into the frith of Forth, where the illuftrious exiles landed at the plice fince that time c.1lled the Quen's Ferry. Malcolm no fooner leard of their lunding than he paid them a vifit in perion; and at this vilit he fell in love with the princefs Margaret. In confequence of this, the chief of Edigar's party repaired to the court of Scotlund. Willim foon made a formal demand of Edgar ; and on Malcolm's refufal, declared war againt him.

William was the moft formidable enemy the Scots late ever encountered, as having not only the whole furce of England, but of Normandy, at his command. However, as he had tyramized mot unmercitully over his Englith fubjects, they were much more inclined to atlitt his enemies than their own prince; and he even found himfelf obliged to give up the county of Nor thumberland to Gofpatric, who hild followed Edzar, upon condition of lis making war on the Scots. This nobleman accordingly invaded Cumberland in return lor which Malcolni 1 avaged Northumberland in a dreadful manner, carrying off immenfe booty, and inviting at tic fame time the Irith and Danes to join hin:-

Even at this time the Danes kept up their claims upon the crown of England, fo that they could not be fuppofed very zealous for the interelt of Edgar. The Inith were alfo interelted in advancing the caufe of Harold's three func, who had put themfelves under their protcction; and befides, their chief view feems to have been to notain plunder at the expence of any party. However, as all thefe vicws tended to the pulling down of William's power, an union was formed againlt hims

\section*{S C O}
but when they came to particular Atipulations, the seotiant. parties immediately difagreed. The three fons of Ha- \(\underbrace{}_{43}\) rold, with a body of Irilh, made a defcent upon Somer- England fethire, and defeated a body of Englifh; but the Irifh invaded. having thus obtained an opportunity of acquirilig fome booty, immediately retired with it, after having ravaged the country. The Danes landed at the mouth ot the Humber from 40 fnall hips, where they were joined by Edgar and his party; and had the allies been unanimous, it is probable thai Willian's government would have been overthrown.

By this time William had taken from Gofpatric the emrdom of Northumberland, and given it to Robert Cunmin one of his Nomala barons; but the Northumbrians baving joined Gofpatric, and reccived the Danes as their countrymen, murdered Cummin and all his followers at Durh:m, whiere they had bien guilty of great cruelties. After this they laid fiege to the forts built by William in Yorkfine ; but not being able to reduce them, the Englifh Scots, and Danes, united their forces, took the city of York itfelf, and put to the fword three thoufand Normans who were there in garrifon; and this fuccefs was followed by many incurfions and ravages, in which the Danes and Nuthumbians acquired great booty. It foon appeared, he wever, that thefe allies liad the intereft of Ddgar no more at heart than the Irifu; and that all the dependence of this forlorn prince was upon Maicolm, and the few Englifhmen who had followed his fortune; for the booty was no fooner obtamed, than the Danes retired to their thips, and the Northumbrians to their habitations, as though they had been in perfeet fafety. But in the mean time William, having raifed a conliderable army, advanced northwards. He firft took a fevere revenge upon the Northumbrians; then he reduced the city of York, and put to death all the inh.bitants; and perceiving that danger was fill threatened by the Danss, he bribed them with a fum of money to depart to their own country.

Malcolm was now left alone to encounter this formidable adverlary ; who, finding himfelf unable to oppofe fo great a force, withdrew to his own dominions, where he remained for fome time on the defenfive, but not without making great preparations for invading England once more. His fecond invafion A fecoud took place in the year 1071, while William wa employ- invafion. ed in quelling an infurrection in Wales. He is faid at this time to have behaved with the greateft cruely. He invaded England by Cumberland ; ravaged Teefdale; and at a place called Fiundreds-keld, he maliacred fome Englifh noblemen, with all their followers. From thence he marched to Cleveland in the north-riding of Yorkthire; which he alfo ravaged with the utmoft crueliy, fending back the booty with fart of his army to Scotland: after which, he pillaged the bifhopric of Durham, wherc he is faid not to have fared the mot facred edifices, but to have burnt then to the ground. In the mean time Gofpatric, to whom William had again ceded Northumberland, attempted to make a diverlion in his favour, by invading Cumberland: but being utterly defeated by Malc, la, lie was obliged to hut himfelf up in Bamborough caftle; while Malenlm returned in triumph with his army to Scotland, where he married the princefs Margaret.

The next year William, having greatly augmented

Scothant. his army, invaded Scotland in his turn. The particu. lars of the war are unknown; but it certainly ended much to the difadvantage of the Sients, as Malcolm agreed to pay him homage. The Englifh hiflorians contend that this homage was for the whole of his dominions; but the Scots with more fhow of reafon affirm, that it was only for thote he poffeffed in England. On the conclution of the peace, a crofs was erefted at Stanmore in Richmondthire, with the arms of botls l:ings, to ferve as a boundary between the polfefions of William and the feudal dominions of Malcolm. P' it of this momment, called Recrofs, or rather Roy-crofs, or The crofs of the kings, was cneire in the days of Camden.

This peace between Matcolm Canmore and Wiiliam produced the greatelt aiteration in the nammers of the Scots. What contributed claclly to this was the excellent difpolition of queen Margaret ; who was, for that age, a patcern of piety and politenels: and next to thrs was the number of foreigners who had fettled in Scoulind; among whom wete i me lirenchmen, who laid the foundation of that triendthip with the Scots which latted for ages. Malcolm hinifel, allo, though by
his ravages in Enghand he teeme naturally to have been a barbarian, was far from being averie to a reformation, and even fet the example himferf. During har hutband's abience in England queen Margaret had choten for her cunfeffor one Turgot, whom the alio made her affiftant in her intenled reformation. She began with new-modellng her own court ; into which fhe introduced the office:, tumiture, and manner of hoving, common among the nore polite nati, ins of Eu . rope. She difmilled from her fervice all thofe who were noted for immorality and impiety : and charged Turgo, on pain of her difpleature, to give his real fentiments on the ftate of the kingdon, atrer the bett inqu ry he could make. By him the was intormed, that dation reigned amung the n bles, tap ne anoong the commons, and meontinence amin \(n_{5}\) all deyrees an me:. Abuve all, he complained that the kingdom was dellitute of a learned elergy, capable of reforming the people by their example and doctrme. All this the queen repretented to her hurbatd, and prevailed upon him to \(i=t\) about the work of refurmatum mmediately; in which, however, he met with confiderable oppolit:on. 't'se Scots, ac. cuftomed to oppref their interiors, thenght all reitrictions of their power were as many fleps towards their flavery. The introduction of foreign offees and titles confirmed them in this opinion; and fuch a dangerous infureetion happened in Mor:y and fome of the roorthein counties, thit Malcolm was obliged to march againt the rebels in perfon. He found them, indeed, very formidabie; but they were fo much incumidated by his refolution, that they intreated the clergy who were amung them to intercede with the king in their favour. Malcolm received their fubmiflinn, but sefufed to grant an uncenditinal pardon. He gave all the common pentle indeed leave to return to their habitations, but nbliged the better fort in furrender themfelves to his pleafure. Many of the moft guiley were put to death, or condemned to perpenal imprifonment ; while others had their eftates confifated. This fercrity checked the rebellious fpirit of the Scots, upon which Malcolm rcturned to his plans of reformation. Sitl, tonever, he found himfelf oppofed even in thofe aurer,
which were moft obvious and glaring. He durft not scout onit entirely atolifh that infamous practice of the landlord claiming the firt night with his tenart's bride ; though, by the queen's influence, the privilege was changed into the payment of a piece of money by the bridegroom, and was afterwards known by the narme of ner. cheta mulierum, or "the woman's merk." In thofs days the Scots were without the pradice of faying grace after meals, till it was introduced by Margarel, who gave a glafs of wine, or other liquor, to thure who remained at the royal table and heard the thankifiving; which expedient gave rife to the term of the gracedrink. Befides this, the terms of the duration of Ler:: and Eafter were fixed; the king and queen beflowed large alms on the poor, and the latter wafhed the fete of tix of their number; many churches, monalieries, \&cc. were erected, and the clerical revenues angmented. However, notwithftanding thefe reformaticns, fon:c hitlorians have complained, that, alung wich the marners of the Englifh and Freach, their laxuries weralfo introduced. Till this reign the Scots had been remarkable for their fobricty and the fimpl city of theiz fare; which was now converted into excefs and riot, and fometimes ended futally by quarrels and bloodihed. We are told, at the fame tume, that even in thefe didye, the nobility eat only two meals a-day, and were terved with no more than two difhes at each meal ; but that their deviation from their ancient temperance occalioned a diminution of the frength and fize of the people.

In the year 1077, Maleolm again invaded England; England but epon what provocation, or with what fuccels, is again innot well known. Lut in 1088, afice the death ol vaded. the Cunqueror, he again cfpoufed the caufe of Edgar Atheling, who had been reduced to implore his affittance a feond time, when William Ralus afceaded the throne of Englind. At the time of Edgar's arrival, Malculm was at the head of a brave and weil-difeiphimen! arniy, with which he penetrated a great way into the country of the enemy; and, as it \(i\), faid, returned to Scotland with an immente booty. Some hindorians till us, that in this expedition Malc. Im met with a defeat, which ,bliged him to return; and inded this is nut . litele countenanced by others, who fay, not nuecd that he was delea'ed, but that it was the qui.! of Go. lice hould proiced no farther. But, be this as is will, William refolved to revenge the injary, and prepared yreat armaments both by fea and land for the iuvation if soth.and. His fuccef, h wever, was not antwerable to the greatrees of his preparations. His fleet was dathed to pieces by forms, and almon all on board ef is perithed. Malcolm had alio laid watte the country through which his :ntagonit was to paf, is fuch an cilectual mamer, that William loft a great part of his troops by tatigus and famire ; and, when he arrived in Scotland, found limfelf in a fination very litule able to relin Malcoln, who was advancing again! l:im with a powerful army. In this difirefs, Ruins had tecourle to Robert de Mow- The \({ }^{68}\) Inebray canl of Northunitertarsd, who difluaded ham rom difa arny venturing a batle, but advifed him by all azeans io in freat npen a negociation by means of Ledear and the nher darger. Englifh nubiemen who relided with Male hin. Edgur undertook the acgociation, on condition of lis being reItored to his cftates in England; hut met with more difficulty than he imazined. Malcolm had never yet reengaized the right of Wiiliam Rufus io the throne

\section*{sco \\ \(734]\)}
soolan 1. of England, and therefore refufed to treat with him a, a fovereigh prince; but offered to enter into a negociation with his brother Robert, furnanned Curt bofe, from the thortne's of his legs. The two princes accordingly met; and Nalcoln, laving thown Robert the dilpolition of his army, offered to cut off his brother Wilham, and to pay to him the homage be had been acculnmed to pay the Conqueror for his Encolith dominiors. But Robert generotilly anfwered, that he lad religned to Rufus his right of primogeniture in England ; and that he had even become one of Wil-

pened in the year 1003, the throne
was ufurped by his scotland. bint Dond virtues and glorious atchievements of the late king, had The throne been at the head of at Arong party during the whole of ufurped by his brother's reign. The ufurper, giving way to the Duald barbarous prejudices of himfelf and his countrymen, ex. Bane. polled out of the kingdom all the foreigners \(u\) lion Maleolm had introduced, and obliged them to take refuge in England. Edgar himielf had long refided at the Englifh court, where he was in high reputation; and, by his intereft there, found means to refcue his nephew young Edgar, the king of Scctland's eldett fon, out of the hands of the ufurper Donald Bane. Tlie favour he fhowed to him, however, produced an accufation againt himfelf, as if he defigned in adopt yourg Edgar as his fon, and fet him up as a pretender to the Englifh throne. This acculation was preferred by an Englifhman whofe name was Orgar ; but, as no legat proofs of the guilt could be obtained, the cuitom of the times rendered a fingle combat between the parties unavoidable. Orgar was one of the Arongelt and moft ac. tive men in the lingdom; but the age and infirmities A fingle of Edgar allowed him to be defended by anotlaer. For a long time none could be found who would enter the lits with this champion; but at lat one Godivin of Winchelter, whofe family had been under obligations to Edgar or his anceftors, offered to defend his caule. Orgar was overcome and killed: and, when dying, conteffed the falfehood of his acculation. The conqueror obtained all the lands of his adverfary, and William lived ever afterwards on terms of the ftrictett friendthip with Edgar.

This combat, trifing as it may feem to us, produced very conliderable effects. The party of Edgar and his brother's (who had likewife taken refuge at the Englith court) revived in Scotland, to fuch a degree, that Donald was obliged to call in the Danes and Norwegians to his affiftance. In order to engage them more effectually to his interef, the ufurper yielded up to them the Orkney and Shetland iflands; but when his new allies came to his affiftance, they behaved in fuch a manner as to become more intolerable to the Scots than ever the Englifh had been. This difcontent was greatly increafed when it was found that William defigned to place on the throne of Scotland a natura! fon of the late Malcolm, named Duncan, who had ferved in the Englilh almies with great reputation. Donald attempted to maintain himfelt upon the throne by the affittance of his Norwegian allies; but, being abandoned by the Scots, lee was obliged to fly to the illes, in order to raife more forces; and in the mean time Duncan was crowned at Scone with the ufual folemnity.

The Scots were now greatly difteffed by two ufurpers who contended for the kingdom, each of them fupported by a foreign army. One of them, however, was ion difpatched. Malpedir, thane of Mearns, furprifed Duncan in the caftle of Menticih, and killed him; after which he replaced Dunald on the throne. 'The affection of the Scots, howeves, was by th:is time entirely alienated from Dondld, and a manifett intention of calling in young Edgar was fhown. Te prevent thic, Donald offered the joung prince all that part of Scotland which lay to the fouthward of the Forth;

54 rields up the Orkney and Shetland illands to the Danes.

d aial to lim ; but the circumltances of his death are

Malcolin
killed at the firge of 9 lnwick cafte. Malcoln all his fouthern polfeflons, for which he fhould pay the fame homage he had been accuftomed to do to the Conqueror, that he thould rettore to Malcolm 12 difputed manors, and give him likewife 12 merts of gold yearly, belides rettoring Edgar to all his Englifh eltates.

This treaty was concluded in Lothian, according to the Englifh hiforians; but at Leeds in Yorkfhire, according to the Scots. However, the Englilh monarch looked upon the terms to be fo very dithonourable, that he refolved not to fulfil them. Scon after his departure Edgar and Robert began to prefs him to fulfil his engagements; but receiving only evalive anfwers, they palied over into Normandy. After their departure, William applied himfelf to the fortification of his northern boundaries, efpecially Carlifle, which had been deftroyed by the Danes 200 years befure. As this place lay within the feodal dominions of Malcolm, he complained of William's proceeding, as a breach of the late treaty; and foon atter repaired to the Englith court at Gloucefter, that he might have a perfonal in- terview with the king of England, and obtain redrefs. On his arrival, William refufed him admittance to his prefence, without paying him homage. Malcoln offered this in the fame manner as had been done by his predeceffors, that is, on the confines of the two kingdoms; but this being rejected by William, Malcolm returlicd to Scotland in a rage, and prepared again for war.

The firt of Malcolm's military operations now proved fatal to lim ; but the circumitances of his death are varioufly related. According to the Scots hiforians, Malcolm having laid liege to Alnwick, and reduced the place to fuch itraits, that a knight came out of the callle, having the keys in the point of a fpear, and pretending that he deligned to lay them at Malcolm's feet ; but intead of this, he ran him through the eye with the fpear, as foon as he came within reach. They add, that prince Edward, the king's eldeft fon, was mortally wounded in attempting to revenge his father's death. 'The Englifh hiftoriuns, on the other hind, contend, that the Scots were furprifed in their camp, their army entirely defeated, and their king killed. On this occafion the Scots hiftorians alfo inform us, that the family of Piescy received its name; the knight who kill. ed the Sonts king having been furnamed Pierceotye, fron the n:anner in which he gave that monarch the fital ftoke. Qucen Marearet, who was at that time 'ying ill in the calte of Ednburgh, died four days after wer hufbim 1.

After the deailh of Malcolm Canmore, which hap.
\(\underbrace{\text { S:othne. brotght them wore put to death as traitors. The king }}\) of England alfo, dreading the neighbourhood of the Nonwckian', intelpofed in young Edgar's favour, and gave Atheling the command of an army in order to reItore his replew. Donald prepared to oppofe his cnemies with all the forces he could ruific ; but was deferted by the Scots, and obliged to flee : his enemies purfued lime fo clofcly, that he was fo. in taken; and being brought before Edgar, he ordered his eyts to be put out, condemning him at the fame time to perpetual banifhment, in which he dicd fome time after.

The hifturiuns of thefe times inform us, that this revolution was cowing to the interpoftion of St Cuthbert, whon appeared to Eidyar, iv furming him that he thould prove viforious, provided he repared next day to his church, and iceeived his banner from the hands of the canons; which he accordingly did, and proved ever afterwards a molt grateful votary to his patron. During his acign a frict fiendihip fublitted between the courts of England and Scotland; owng to the mariage of Henry I. of Lingland with the Puncefs Matilda, tilter to ldgar. 1 his has given occation to the Eugh hi land as a fendatory of Hemy ; and to this purpofe have forged certain writings, by which Edgar acknowledges "That he held the kingdom of Scotland by gitt fiom his Lord William king of England; and with confent of his faid lord, he gives to Almighty Gov, and the church of Dmanm, and to the ghatious bifhep of St Cuthbert, and to bithop William, and to the monks of Durhan, and their fuccelliors, the matifions of Berwick and Coldingham, with feveral other lands puffeifed by his father Milcolm: and this charter is granted in the prefence of bifhop Wi.liam, and Turgot the prior ; and confirmed by the croffes of Edgar his brother, and ntl:cr noblemen." But that thefe writings are ferged, ap. pears from the mon-exifence of the original charter, ard from their bsing related in quite a differcat mannor by fome other authors.-For the fame purpofe a feal has bein forged of Edgar fitting on hrfeback, with a fword in his righ:-hand, and a theid on his left arm, within a berder of Fra:se. But this haft circumfance is a fufficient promf of the forgery ; lince, in the fame rep. fitory in which this fe.l is kept, there are five charters of the fiame Edgar which are undoubtedly genuine; and on the fexis belonging to them he is icprefented fitting on two fwords placed acrois, with a feeptre in one hand, a fiword in the other, a royal diadent on his had, with this infriptinn round it, Scotorem Bastueus, which the beff Englilh antiquaries alluw to have been a tille denoting independency.

Ater a reign of une years, Edgar died at Dundec, in the year 1107 ; and was fucceedsed by his brother Alex:Inder I. furnamed the Firce from the impetuofity of his temper. On his acceffion to the throne, hollever, the Scots were fo ignorant of his true claradter, on account of his appearance of piety and devotion, that the northern parts of the kingdem were foon filled with rivages and blocdhed, by reafon of the wars of the chicftains with each cher. Alexander imme. diat:ly raifed an army, and murching into Moray and Rus-fiure, atacked the infurgents feparately; and having fubdued then all, he put great wumbers of them
from the oppreflion under whith they groaned. A re-
matkable intrate of this appeared matkable intratace of this appeared on his retum fropa the expedition juph now mentioned. In pafing through the Meanns, he met with a widew, who complanes that he: hufband and fon had been put to death by the young earl their fuperior. Alexander immediately alighted frory, his horfe, and fwore that he would not remount him till he had inguired into tha juilice of the cornplaint; and, finding it to be true, the uffender was hanged on the fipor. Thede vigorous proccedings prevented all attempts at epen rebeihion; but produced many colfpiracics among the protligate part of his privase fuljecis, who had been accultomed to live under a more remifs govcrument. The molt remarkable of thefe tonk place white the king was cn:aged it building the callic of Batedgar, to called in menory of his brwher Edgar, who had laid the foundation-furse. It w.ts iftuated in the Carfe of Gownc, whill, we are t/d, had forme:ly belonged to Donali B. bue, but afternards came to the crown, cither by donation or forleituc. The conlpiraturs bribed one of the king's chamberlatins to introduce them at night into the loyal bect-chamb-r: but Alexander, alarmad at the noife, diew his fivord, and killed fix of tiem; aficr which, by the thelp of a knight named Alexander Carron, he cleaped the danger, by fleen, ginto liic. The con:piraturs chiclly refided in the Mearns, to which Alexander once more repaire? at the head of an army; but the rebels ietreated northwards, and crolled the Spey. The king purfued them acrofs that river, defeated them, and breught to jultice all that fell into his hands. In this battle, Carron diftinguiflacd himfelt foeminently, that he obtainct the name of Ski imgeour or Strimzeour ; which indecd is no other than the Engliih word flarnifl)er or fiskler.

The next remarkable tranfaction of Alcxan Jur's rciorn, as record ad by the Englifh hittorians, was his journey into England, where he paid a vilit to Henry I. whom he found eryaged in a war with the Welch. The occafion of it was this: Henry had planted a culony of Flemings on the borders of Walcs, in order to keep that turbulent people in awe, as well as to introduce into his kingdom the manufactures for which the Fiemings were fimou. The Wetch, j:alous of this growing colony, invaled Englind; where they deteated the eat of Clietice and Gubert Strungbow, the two moit powerful of the Englith fubjeAs. Alexander, in virtue of the fealty which he hadiworn for his Engl:ilh puricifinns, readily agreed to le.ad an army into II ales. Tl. cre he defented one of the chefains, and reduced him to great llaits: but could not prevent him 'rom cfeaping to Gritith prince \(f\) North Wales, with whom he was coloty allied. Henry alfo marched againtt the enemy, but with much wonfe fuccuts in the field than Alexar. der ; fir lie lent two-thirds of his almy, with almoft his whole baggage, by fatigue, famine, and the attacks of the Welith. This lefs, however, he made up in fome meafure by his prlicy ; for having found means to raife a jealouly between the :wo Welch cliets, lice induced them to conclade a peace, but not withuut reft ring all his lands to the o:ze, and pasing a conlider.ble fum of money to the orber. Alesander died in 112.4 , a1ter a acign of feven:cen years; and was buriced at Dan-

 －マージ the civil war tha carred on with Stephen．In 1：3G， David met has antagovilt at Durham；but as neither party cared to verture an engagement，a negociation sook place，and a treaty was concluded．This，bowever， was oberved but for a thort time；fur，in the follow－ ing year，D．evid again invaded England，on fome frivo－ lous priterces．Ife defeated sitephen at Ruzburgh； and forced him to retreat precipitately，after lofing one h．alt of his armg．Next year he renewed his invation； and，thoush he himelt was a man of great nildnefs and hamanity，he fuffred his troops to commit fuch ont－ 1asces，：as firmiy united the Engy lith in oppotition to him． Ilis grand－nephew William cut in pieces the vanguard of the Inglifh army at Clithero；atter which he rava－ ged the country with fuch cruelty，that the inhabitants became exafperated beyond meafure againtt him．New affociations were entered into againit the Scoss ；and the Englifh army receiving great rcinforcements f：om the fouthward，advanced to Nothallerton，where the fimous if indard was produced．The body of this It．indard was a kind of box which moved upon wheels， from which arofe the matt of a thip furmounted by a filver crofs，and round it wete hung the banners of St Peter，St John de Beverly，and St Wilfred．Standards of this kind were common at that time on the conti－ ncat of Europe；and to great contidence had the Eng－ lifh in this flandard，that they now thought themfelves irvincib！e．They had，however，a much more folid ground of cenfidence，as being much better armed than their antagonifts．The armies met at a place called Culton Mour．The firft line of the Scots army was compoled of the inhabitants of Galloway，Carric，Kyle， Cumningham，and Renfrew．Thete by rome hiftorians are called Pafts，and are faid to have had a prince of their own，who was a feudatory to David．The fe－ cond line contited of the Luthian men．by which we are to underftand the king＇s fubjects in England as well as th：e louth of Scotland，together with the Englifh and Normans of Maud＇s party．The third line was formed of the clans under their different chieftains；but who were lutject to no regular command，and were always impatient in return to their own country when they Ind aequired any booty．The Englifh fuldiers having ranged thenfelves round their Atandard，difmounted tiom their horles，in order to aroid the long lances which the firf line of the Scots army earried．Their 1rens－line was intermixed with archers；and a body of ravalry，ready for purfuit，hovered at fome diftance． The liat－，befides their lances，made ule of targets； tu：，vificn the Eaglith clofed with them，they were thon dif rdesed and driven back upon the centre，where David commanded in perion．His fun made a gallant retiftance，but was at laft forced to yield：the latt line leems never to have been engaged．David，feeing the victory decided againit him，ordered fome of his men th fave themfelve，by throwing away their badges， which it feems Mdud＇s party h．td worn，and mingaing with the Englifl；after which he himfelf，with his 1huthered forces，ictreated towards Carlife．The Eng－
pioits performed on either fide ；and a peace was con－ cluded，by which Henry prince of Scotland was put in polition of Huntiagdon and Northumberland，and tcols an oath of fealty to Stephen．David continued frithful to lis niece tine emprefs as long as he lived； and died at Carlille in the year 1153 ，after a glorious reign of fomewhat more than 29 years．

David was fucceeded by his grandfon Malcolm IV． furnamed the Madien，on account of his continence． He appears to have been a weak and fuperftitious prince，and died of a deprelion of fpirits in the year 116\％．He was fucceeded by his brother William I． who immediately entered into a war with Henry Il．of England，on account of the earldom of Northumber－ land，which had been given up by Malcolm ；but Hen－ ry，linding his afinirs in a very embarralfed fitution， contented to yield up this county，on William＇s paying him homage，rather than continue the miferies of war． In 1172 ，he attempied to avail himfelf of the unnatural war which Henry＇s fons carried on againt their father， and invaded England．He divided his army into three columns：the firt of which laid fiege to Carlinte；the fecond he himfelf led into Northumberland；and the king＇s brother，David，advanced with the third into Leicefealhire．William reduced the caftles of Burgh， Appleby，Warkworth，and Garby ；and then joined that divifon of his army which was befieging Carlille． The place was already reduced to fuch fraits，that the governor had agreed to furrender it by a certain day， provided it was not relieved before that time ：on which the ling，leaving fome troops to continue the fiege， invelted it caflle with fome of the forces he had under lis command，at the fame time fending a ftrong rein－ forcement to his brother David；by which means he himielf was left with a very fmall army，when he re－ ceived intelligence that a flrong body of Englifh under Robert de Stuteville and his fon were advancing to furprife him．－William，fenfible of his inability to refitt them，retired to Alnwick，to which he inftantly laid fiege；but in the mean time afted in fucly a carelefs and unthinking manner，that bis enemies actually ef－ fected their defiens．Having drefled a party of their foidiers in Scots habits，they tonk the king himfelf pri－ foner，and carried him，with his feet tied under the belly of a horfe，to Richmond Cafile．He was then carried in chains before Henry to Northampton，and ordered to be tranfported to the caftle of lalaife in Nounandy，where he was thut up with other ftate pri－ foners．Suon after this an accommodation took place between Henry and his tons，and the pifoners on both dides were fet at liberty，William only excepted，who bnre his confinement with great impatience．Of this Henry took the advantage，to make him pay homage for the whole kingdom of Scotland，and acknow－ ledge that he beld it only as a feu of the crown of Encland；and，as a fecurity，he was obliged to deliver into the hands of Henry all the principal forts in Scot－ land，viz．the caftes of Roxburgh，Berwick，Jedburgh， Edmbutgh，and Stinling；William at the fame ime agreeing to pay the Englith garrifons which wore put into thele calles．D．wid，the king＇s brother，with 20 barons，who were prefent at the ligning of this fhame－ ful convention，were put into the hands of Henry as holtares for William＇s good faith；after which the king was fet at liberty，and retumed to Scotland．

\section*{64}

William I． enyages in 3 war with Hanry II． of England． and the scots were in a condition for carrying on the war next year．However，there were now no great ex．

The affairs of Scotland were now in the greaten ennfuficn. The peop!e of Galloway, at the head of whom were two noblemen or princes called Othred and Gillert, had taken the opportunity of alferting their independency on the crown cf Scotland; and, having expelled all the Scots officers out of the enuntry, they demolifh. ed all the ferts which William had ereced in their coun. try, and put to death all the foreigners. But in the mean time a quarrel eniuing between the two chiefs, Othred was murdered by Gilbert, who immediately applied to Henry for partection.

Hensy, in crder to give all pofible fanction to the convention betwirt him and William, fummoned h:im to meet him anillis fon at York. Wiliam obeyed the fummons, and along wih him appeared all the great rublity and landhe lders; who corfiemed the convention of Falaife, iwore fealiy to Henry, and put themfelves and their ccuniry under his protection. In the mean time, Gilber!, who was at the head of the rebels in Galloway, had effered to put himfelf and his pe ple under the protection of the king of Englans, and to pay to Henry 2000 meaks of filver yearly, with 500 cows and as many hogs, by way of tribute: however, Henry, that he might oblige his new feudatory William, refuled to have any cencern in the affair. On this, William ordered his general Gilchrift to march again't him ; which he did with fuch fuccefs, that Gilbert was entirely defeated, and Galloway again recuced under the dominion of Scotiand. Very foon after this viftory, Gilchrilt fell under the k 'rg's cilp!eafure on the following occafion. He nad married Matilda, fifter to Wiiliam; and on fufpicien, or proof, of her incontinence, put her to death at a village called Nfaynes, near Dundee. The king being liighly difpieafed at fuch a grofs affront to himfelf, tummoned Gilchrif to take his trial for the murder: but as the general did rot chocfe to make his appearance, his eftates were conffeated, his caftes demolihed, and he himefelf banifhed. He took refuge in England; but as it had been agreed in the convention between William and Henry that the one fhould not harbour the :raiecrous fubjects of the ocher, Gilchrift was forced to return to Scotland with his two fons. There thes were expofed to all the miferies of indigence, and in perpetual fear of teing difcovered, fo that they were obliged to fkulk from place to place. William, on bis return from an expedition againf an ufurper whom he had defeated, happered to obferve three ftrangers, who, though difguifed like ruftics, appeared by their noble mien to be above the rulgar rank. Wilhiam, who firf difeovered them, was confirmed in this apprehention, by fesing them frike cur of the high rodj, and endeavour to avoid notice. He ordered them to be feized and brou be before h.m. The oldeft, who was Gilchrit himfelf, fell upon his knees before him, and gave fuch a detail of his misfortunes as drew tears frem the eycs of all prefent; and the king rell red him to his former henours and eltates. From the family of this Gilchith that of the Ogilvies is faid to be defcended.

The Scots continued \(t\) o be in fubjefion to the Eng. lifh until the acceffier of Riclard 1. This menarch being a man of romantic valour, zealoully undertook an expedition into the Holy Land agninft the Turks, according to the fuperlition of the times. That he Vus. XVI.
might fecure the quise of his dominiar.s in his atfence, he determined to make the ling of Scotland his friend; and for this purpefe, ho thought nolling could be mere acceptab!e than relcafing tim and his fubjects from that fubjection which cren the Englith themfelves confidered as forced and unjul. Howeyer, he determined not to rein his lefe this opportusity of fupplying limefelf with a fum R.charlit. of money; which couid not but be abiolutely r.ecefary in fuch an expenfive and dangerous undertaling. H: therefore made William pay him 10,000 merks for this seleafe: after which he entered into a convention, which is fuill cxtant; and in this he acknowledges, that ": all the conventions and acts of fubmition from William th the crown of England had been extotted from lim by unprecedented writings and dureffe." This tranfaction happened in the year ilsy.

The generofity of Richard met with a grateful return from William ; for when Richard was imprifone i by the emperor of Germany in his retura: from the Ho. ly Land, the king of Scothend fent an army to alift his regency againit his rebeilious brother John, who had wickedly ufurped the throne of Eingland. For this Riehard owned his obligation in the highefe degree : but Jilliam afterwards made this an handle for fuch high demands as could not be coinplied with. Never. thelefs, the two monarchs continued in friendthip as long as Richard lived. Some diferences happered with king Joln about the poffeffion of Northumberland and other northern counties: but thefe were ail finally adjufed to the mu:ual fatisfation of both par-tues ; and William continued a faithful ally of the Englifh monarch till his death, which happened in the year 1214, after a reign of \(\div 9\) years.

William was fueceeded br his fon Alexander II. a Alean. \({ }^{69}\) youth of 16 . He revived his claim to Northumber. cer 11 . land and the other r.orthern counties of England; but John, fuppofing that he had now thoroughly rubdne 1 the Englifh, not only refufed to confider the demands of Alexander, bu: made preparations for invading Scotland. John had given a!l the country between Scotland and the river Tees to Hugh de Laliol and another nobleman, upon condition ci their defending it againft the Sents. Alexander fell upon Northumberland, which he eafily reduced, while John invaded Scotland. Alex- War with ander retired to Melros, in order to defend his own John king country ; upon which John burnt the towns of WFark, of Englad. Alnwick, and Morpeth, and took the ftrong caftes of Roxburgh and Berwick. He next plundered the abbey of Coldingham, reduced Dunbar and Haddingion, ravaging the coantry as he pated along. His next operation was direEted again? Edinbu:gh; but being oppoidd by Alcrander at the head of an army, he precipitately marched back. Alexander aid not fal to purfue; and John, to cover his retreat, burnt the sowrs of lierwick and Coldingham. In this retreat the kingi of England himelf fet his men an example of barbasit?, by fiting lire every morning to the houte in whith he had ladged the friceding nath. In thert, fuch detolatoon did John fpread all around him, that Aleadnder tound it impolifible to continue his purfuit; for w...ich reaton he marched wefward, and invaded Englard by the way of Carlite. This place he iook and fortiked; after which he marched futh as far as Richmond, ieceiving homage from all the great barons as he went 5 A alog.

Eratisn? alony. A: Richnond he was again Atopped by John's ravagcs, :nd obliged to return through TVeftmorehnd to his own diminions.

When the Englifh barons found it necefary to put thembelves under the protection of Louis, fon to the ling of France, that prince, among otl.cr aats of forereignty, funmonel Alex:meder to do him humage ; but the later being then engaged in the ferge of Carlife, whiel had fallen into the hands of ling John, he could not immediately attend. In at fort time Alexander found himelf obliged to abandon this enterpri:e: after which he laid fiege to Barnard-cafle; but being bafled here alfo, marched fouthwards through the whole Kinglom of England, and met Louis at London or Dover, where the prince confirmad to hini the rights ts Northumberland, Cumberland, and Wefmorelans. He con:inued a faithful ally to Louis and the barons in their wars with John; and, in 1216 , brought a frefl army to their afintance, when their athairs were almoft defperate. This once more turned the fcale againft John ; but he foon after dying, the Englifl eafily became reconciled to the government et Henry III. and the party of Louis dwindled every diy, tiil at laft he was obliged to drop all thoughts of being king of England.

As lons as Louis continued in England, Alexander proved faithful to his intereft; but, in 1217 , he was on fuch good terms with Henry as to demand his eldelt filter, the princefs Joan, for a wi:e. His reque!t was granted, and in 1221 he efpoufed the princefs; while his eldeft fifter Margery was maried to Hubent de Burgh jutticiary of England, and inis fecond fifter to Gilbert earl Marfhal, the two greateft fubjeets in Englind.

As long as the queen of Scoland lived, a perfert hatmony fubtifted between the Scots and Einglith : but in 1239 queen Joan died without children; and Alexander foon after married Mary, the dauglter of Egelrand de Coucy, a young and beautiful French lady, by whom he had a fon named Alevander, in \(12 q^{1}\). From this time a coolnefs took place between the two courts, and many differences arofe ; but no hofilities were commenced on either fide during the lifetime of Alexander, who died in 1249 in the 35 th year of his reign.

Immediately after the death of his father, Alexander III. took poffefion of the throne. He is the firft of the Scots kings of whofe coronation we have any particular account. We are told, that the ceremony Wes performed by the bifiup of it Andrew's, who girded the king with a military belt, probably as an cmblem of his temporal juridiction. He then explained in Latin, and aiterwards in Gaelic, the laws and oaths relating to the king; who agreed to and received them all with great appearance of joy, as he alfo did the benelliction and ceremony of coronation from the Lame prelate. After the ceremony was performed, a Highlander, probably one of thofe who went under the denomination of Sannachies, repeated on his knees before the throne, in his own language, the genealogy of Alexander and his ancefors, up to the firf king of Scotiand.

In 1250 , the king, though no more than ten years of age, was mamried to the daughter of Hemry, who now thought it a proper opportunity to caufe him to do homage for the whole kingdom of ficctand. But Alex-
ander, notwithanding lis youth, replied with great scotlane. fer:fe and modelly, that his butinefs in England w:as matamony; that he had come thither under Henry's proteation ald insitution; and that he was no way prepared to anfiver fuch a difficult queftion.

Hemry feems to have been encouraged to make this attempt by the diftracted thate if the Scots affuiss at that tume; for, during the mirority of the king, the nobility threw every thing into confution by their dif. fenfions with one another The family of Cummin wer: now become eacsedingly powernul; and Alcxarder II. is thamed by Buchanan for allowing them to obtain fuch an exorbitant degree of power, by which they were enabled almof to thake the foundation of government. Nuwithutuding the king's retural to fubmit to the homage sequired of him, they inagined that Fienry's influence was now tou great ; and fearing bad contequences to thembelves, they withdew fr. m Fork, leaving Henry in full poilffion of his fin-m.law's perfon. Henry, however, to how that he deferved all the confidence whach could be :epored in him, publicly delared, that he dropped all clam of fupenoriiy with egard to the crown of Scotlind, an! that he would ever aterwards act as the fatler and suardian of hi fer inlaw; confirming his affuranous by a chelter. Ser when Alexander retumed to Scotiand, he found t.ey had made a flrong party againit his Engith o mue? rus. They now exclamed; that Scuth nd was nu betten it in a province of Englanc ; and laving g.inid ame at an the nobility over to this opmion, thiy lept the king and queen as two Atte-prifnerers on th cattle of Edin burgl. Henry had fecret intelilig-nce of thefe proceedings; and his queen pivat ly ient a phyfician whem the could truft, so inquire into lar daughter's fituation. Having found means of being admitted into the young queen's preferce, the gave him a moft lamentable account of her fituation. She 1 did, that the place of their confinement was very un wholefome, in confeq̧uence of which their health was in imminent danger ; and that they had no concern in the affairs of governmeni Hiftorians do rot inform us by what means they were redeced to this dimal fatuation; only in general, that the Cummins ufurped the whole power of the flate. Henry did not well know how to act. If he proceeded at once to violent mafures, he was afraid of the lives of his daughter and ion in-law; and, on the other hand, by a more cautious conduct, he left then expofed to the wicked attempts of thote who kept them in thaldom, fone of whom, he very well knew, had defigns 74 on the crown itfelf. By advice of the Scots royalifts, fet at tiberamong whom wese the earls of Dunbar, Fife, Strath- ty by Hena erne, Carric, and Robert de liruce, Henry aflembled his ry. military tenants at York, from whence he himelf advanced to Newcafte, where he publithed a manifefto, diflaiming all defigns againit the pcace or independency of Scotland; declating, that the forces which had been collected at York were defigned to maintain both; and that all he meant was to have an interview with the king and queea upon the borders. From Newcintle he proceeded to Wark, where he privately difipatched the earl of Glocefter, with his favomite John Manfel, and a train of trufty followers, to gain almifion into the calle of Edinburgh, which was then held by John Baliol and Robert de Rofs, noblemen of great influence both in England and Scotland. The Earl and Manfei

Seorland. gabed admittance into the caftle in difonife, on pretence of their being tenants to Baliol and Rofs; and their followers obtained accefs on the fame accouni, without any fufpicion, till they were fufficiently nume. rous to have maftered the garsifon, had they met with any refiltance. 'The queen imonediately informed them of the thraldem and tyramy in wheh the hed been kept; and among other things dechard, that the was till a virgin, as leer jailors obliged her so keep leparate from her huford. The Englith, beins maters of the caßle, ortered a bed to be prepared that very night for the hirg and queen; and Henry, haring of the fueecfs of his party, lent a fale-condut for the royal pair to meet him a: Alnwick. Robert de Rofs was fum. moned by Hensy to alfwer for his conduct ; but throwing limfeil at the king's feet, he wats punithed only by the fequefration of his eflate, as was John Baliol by a heary tine, which the king of England referved entirely to his own ufe.

Alexanjer and his queen were attended to Alnwick by the heads oi thar paty; and when they arrived, it was agiecd that Henty fhould an as his fon-in-law's guardian; in conr-quence of which, feveral regulations were made in order to lupprefs the exorbitat power by rebeis, lint relicved.
who landed and took the cafle of Air. Alezander ins. :is cat an. mediaicly difpatched anduarders to enter into at weaty with Hatpuin; Lut the latier, Aufied with fuce 2 ss, would learken to no terms. He made limfeit mader e: the illes of Pinte and Arran; after which be paticed over 10 Cunnunglan?. Alesander, prepared to olpofe himo divided his army intos thace bides. 'Whe firlt was cime m:inded by Alexander high fleward of Soothad (ilie great grandfather of Robent Il.) and confitied re the Aigyle, Athol, Lenox, and Gatuway men. "lroc fecond was compofed of the inlabitunts d Loelid. life, Merfe, Berwick, and Stiriing, mader the ecmnatad of Patrick earl of Durbar. Tlae king himacif icd the contre, which confifted of the inhalitan's of P'it'. Thite, Angus, Mearns, and the northan cotan ees.Haquin, who was an excelient commander, diffofcil lis men in oider of battle, and the engrgement heg on at a place called Largs. Loth partion fught whth \({ }_{\text {great }}\) refolution ; but at laf tinc Norwegians were deteated with dreadfui farghter, nu fewer than 16,000 of them being killed on the foot. The remaindor efcaped to their thips; which viere fo complctely wrecked the day after, that Haqum conld farce mad a velled to carry him with a few biends to Onkey, where he foom after died of grief.

In cunfequence of this vietnry, Owen er Juhn liiag of the inand of Man fubuitted to Alexander ; and lus example was followed by feveral other princes 0 : the illands belonging to the N rwegians. Haquin's for, Magnus, a wile and !carned pritice, foon afier arrived in Scoland with frefh remforcements, and propoled at treaty: but Alexanser, inflead of lifening to an ac. commodation, fent the catls of Buchan and Murray, with Allen the chamberlain, and a confiderable bodj; of men, to the weftern illands, where they put to the fword \(f\) me of the i habitants, and hanged their chicts fir h. ving ene uraged the Nerwegian invation. In the mean time, \(M\) gnus returned to Norwdy ; whete a t eaty was at lath concluded between him and Alexander. Ecotiand. had formed a defign on the liberties of that kingdom;
\(7^{78}\) Defigns of acknowledging the fuperiority, by which he referved Edwarll. his right to the homage of the kingdom of Scothand, azaint the when it floult be claimed by him or his heirs. The liberties of bifhop of Norwich linggefted this falvo: and this was
Scotland. the reaton why Alexande: would not perform the hothe reaton why Alexander would not perform the homage in petion, but left it to be performed by Robert Bruce earl of C.rric ; Alexander ftanding by, and expreflyly declaring, that it was only paid tor the lands he held in England. - No aets of holtility, however, took place during the lifetime of Alexander, who was killed on the 1 th of March \(12 \% 5\), in the 45 th year of his age, by his horfe rulting down the black rock near liinghorn as he was hunting.

Both before and after the death of Alexander, the great fibjects of Sentland leemed to have been fenfible of Edward's ambitious defigns. On the marriage of Margaret with Eric prince of Norway, the ftates of Scotland paffed an aet obliging themfelves to receive ler and her heirs as queen and fivereigns of Scotland. Edward at that time was in no condition to oppore this meafure, in which the Scots were unanmous; ancl theref re contented himfelf with forming factions among the leading men of the countiy. Under pretence of refuning the crofs, he renewed his intrigues at the court of Rome, and demanded leave from the pope to collect the tenths in Scotland; but his holinefs replied, that he could make no fuch grant without the confent of the government of Scotland. On the death of Margaret queen of Norway, her daugbter, in confequence of the ast abovementioned, was recognized by the ftates as queen of Scotland. As the was then but two years old, they came to a refolution of excluding from all thare in the government, not only Edward 1. but their queen's father ; and they accordingly eftablifhed a regency from among their own number, confiling of the fix following noblemen; viz. Robert Wifhart bithop of Glafgow, Sir James Cummin of Badenoch, ienior, James lord lugh iteward of Scotland, who were to have the fuperintendency of all that part of Scotland which lay to the fouth of the Forth; William Frafer bilhop of St Andrews, Duncan M•Duff earl of File, and Alexander Cummin earl of Buchan, who were to have the direstion of all affars to the north of the fame river.- With thefe arrangenients Eric was exsecdingly difpleafed, as conlidering himielf as the only rightol guardian of his own child He therefore cultivated a good correfpondence with Edward, from whom le had received conliderable pecuniary fivours; and perceiving that the תates of Scothand were unamimous in excluding all foreigners from the management of th ir concerns, he fcil in with the view's of the king of England, and named commilfioners to treat with thofe of
two partics, however, were within the prohibited de. grees of confanguinity, being firt coufins, a difpenfation was applied for to Pope Boniface, who granted it on condition that the pecrs of Scotland confented to the match.

Though the Scots nobility were very much againft this match, they could not refule their confent to it when propored by the father and grand-uncle of their young queen. 'Tley therefore appointed the bifhops of St Andrew's and Clafgow, with Robert Bruce lord of Aunandale, and Juhn Cummin, to attend as their deputies, but with a dalvo to all the liberties and honours of the realm of Scotland; to which Edward agreed. Thele deputies met at Salibury with thofe of England and Norway; and it was at lait agreed, 1. That the young quacen fhould be reat from Nurway (free of ail marriage-engagements) into England or Scotland. 2. That if the queen came to England, fhe fhould be at liberty to repair to Scotland as foon is the diftractions of that kingdom fhould be fettled: that the fhould, on her arrival in her own dominions, be free of all matrimonial contratts ; but that the Scots fhould engage not to difpofe of her in marringe without her lather or Edward's confent. 3. The Scots deputies promifed to give fuch fecurity as the Norwegian comminioners thould require, that the tranquillity of the nation thould be fettled before her arrival. 4. That the commiffioners of Scotland and Norway, joined with commifioners from Englaud, flould remove fuch regents and officers of thate in Scotland as hould be tuipected of difaffection, and place others in their ftead. If the Scots and Norwegian commifioners fhould difagree on that or any other head relating to the government of Scotland, the decifion was to be left to the arbitration of Englifh commiffioners.

The party of Edward was now fo frong in Scotland, that no oppofition was made to the late agreement, in a parliament held at Brechin to deliberate upon the fettlement of the kingdom. It is uncertain whether he communicated in form to the Scottilh parliament the fope's difpenfation for the marriage : but mort probably he did not; as, in a letter written to him by the ftates of Scotland, they mention this as a matter they heard by report. On the whole, however, they highly approved of the marriage, upon certain conditions to which Edward was previoufly to agree; but the latter, without waiting to perform any conditions, immediately fent for the young queen from Norway. This exceedingly difplealed Eric, who was by no means inclined to put his daughter into the bands of a prince whofe lincerity he fuppected, and therefore flifted off the departure of the princefs till he fhould hear farther from Scotland. Edward, alarmed at this, had again recourfe to negociation; and ten articles were at laft drawn up, in which the Scots took all imagiable precautions for the fafety and independency of their coumtry. There articles were ratified by Edward on the 28 h 3 of Auguft 1289; yet, even after the affair of the mariiuge was fully fettled, he luft no time in procnring a, Atrong a party as he could. At the head of thele were the bifhop of St Andrew's and John Baliol. 'That prelate, while he was in England, was highly careffed by Edward, from whom he had great expestations of preferment ; and Baliol, having great eftates in England, confidered the latter as his fovereign. The bi-

Sootiaud. Shop, on his return to Scotland, acted as a Spy for Fidward, and carried on with him a fecret correlpondence, informing him of all public tranfactions. It appears from this correspondence. that the Scots were far from being unanimous as to the marriage. Bruce earl of Ancandale fuipected, for tome reafon or other, that the young queen was dead; and, fun alter Miclaclnias 1290 , alfembled a body of forces, and was joined by the earl of Mar and Athol. Intelligence of there commotions was carried to Edward by Baling! ; and the LiShop of St Andrew's advifed Edward, in cate the report of the queen's death thould prove true, to march a body of troops towards Scotland, in order to fecure fuch a fucceffor as he thought proper.

Edward, in the mean time, consented to allow: ambaffadors to be feat from Scotland to bring over the young queen; previous to which, he appointed the biSop of Durham to be lieutenant in Scotland for the queen and her future husband ; and all the officers there, both civil and military, obliged themeives to surrender their employments and fortrelfes to the king and queen (that is, to Edward) immediately on their arrival in Scotland. But while the mont magnificent preparations

80 were making for the reception of the young queen, ertain intelligence of her death was received; but it is not certainly known whether this event happened before the arrival of the ambaffadors in Norway or alter her depar ore from that country.

The Scots were thrown into the utmof confternation by the new's of their queen's death; while, on the
for the crown.
married the fecond daughter, louella, was bemized married to Robert Bruce ; and their foo Robert was a candidate likewife. The third daughter, Ada, had been married to Henry Hastings, an Encl. h nobleman, and predecelinr to the present earl oi Hunting. don. John Haftings, the for of this marriage, was a third competitor ; but as lis claim was conteffedly the worn of the three, he only put in for a third of the kingdom, on the principle that his mother was jointhair with her two lifters (c). Several outer claimants now farted up. Florence earl of Holland pretended to the crown of Scotland in right of bis great grand. mother Ada, the eldest lawful filter of William, rometime king; as did Robert de Pynkency, in the right alto of his great grandmother Marjory, fecond filter of the fame king William. Patrick Gallichtly was the foo of Henry Gallightly, a baftard of William ; Tilliam de Roofs was defended of Isabel; Patrick earl or March, of llda or Ada ; and William de Vefci, of Mar. jory ; who were three natural daughters of king Will. liam. Roger de Mandeville, defended from Auric. another natural daughter of William, alto put in his claim; but the right of Nicolas de Solis, if baftards could give a right, was better than the former. His grandmother Marjory, the wife of Allan le Huffier. was a natural daugher of Alexander II. and confequently filter to Alexander III. John Cummin lord of Badenoch derived his claim from a more remote fource, viz. Donald Bane, who ufurped the crown about 200 years before this time; but he was willing to reign his pretenfions in favour of John Baliol. The latter indeed had furely the bet right; and, had the fucceflion been regulated as it \(i_{5}\) in all hereditary kingdoms at this day, he would undoubtedly have carrice it. Bruce and Haftings, however, pleaded that they were preferable, not only to John Baliol, the grandchild of Margaret, but alfo to Derverguill her daughter and his mother, for the following reafon. Der verguill and they were equally related to their grandfather earl David: The was indeed the daughter of his eldest daughter; but the was a woman, they were men ; and, fad they, the male in the fame degree ought to fucked to fovereigutics, in their own nature impartible, preferable to the female.

Notwithstanding this number of candidates, however,
(c) The pedigree of the three principal competitors will be fully underflood from the following fithemc. David I. King of Scots.

David Earl of Huntingdon, fecend for. 1
 crer, it was foon perceived, that the claims of all of them might be cut off excepting two, viz. Waliol and Bruce, of whom the former lad the prefrence with refpect to hereditary right, and the latter as to popularity. Baliol had frongly attached himfelf to Edward's party; which being by far the moft powerful in Scotiand, gave him a decided fuperinity over Bruce. The event was, that Edward, by his own party moft probably, though, fome fay, by the unanimous woice "f the Scots parliament, was appointed to decide between the two competitors. It foors appeared, howcver, that Edward had no mind to adjudge the crown to any perfon but himfelf; for, in an affembly held at Norham on the woth of May 129:, Brabanzon the chief juftice of England informed the members, "That lis mafter was come thither in confideration of the dlate of the realm of Scotland, which was then wihh- cut a king, to meet them, as direct fovereigh of that kingdom, to do juftice to the claimants of his crown, and to eftablifh a folid tranquillity among his people; that it was not his intention to retard jultice, nor to ufurp the right of any body, or to infringe the liberties of the kingdom of Scotland, but to render to every one his diae. And to the end this might be done with the more eafe, he required the affent of the flates ex abundante, and that they fhould own him as direct fo. sereign of the kinfdom; offering, upon that condition, to make ufe of their counfels to do what juftice demanded." The deputies were afloniflied at this declaration, and replied, that they wers by no means prepared to decide on Edward's claim of fuperiority; but that Edward ought previoufly to judge the caufe between the two comperitors, and require homage from him whom he fhould choofe to be king. Edward treated this excufe as trifing, and gave them till next day to confider of his demand. Accordingly, on that day, the aflembly was held in Norlam church, where the deputies from Scotland infifted upno giving no anfiwer to Edward's demands, which could he decided only by the whole community; reprefenting, at the fame time, that numbers of the noblemen and prelates were abfent, and that they mult have time to know their fenfe of the affair. In confequence of this, Edward gave them a delay of three weeks ; which interval i:e emplosed in multiplying claimants to the crown of Scotland, and in flattering each with hopes, if he would acknowledge his fuperiority. But when the affembly met, according to appointment, on the 2 d of June foll wing, they found the place of meeting furyounded by a numerous army of Englith. Edward liajemployed the binop of Durham to draw up the hiterrical evidence of his right to the crown of Scotlud: which tas finec been publifhed. In this paper mertion is made of the fealty and homage performed by the kings of Scotlard to the Anglo-S:axon kings of England; but no fufficient evidence is bicught of any fuch homage being attually ferformed. As to the hinnaze performed by the kings of Scotland from the time of William the Conqueror to that of the difpute between Bruce and Balinl, the Scots never denied it; but they contended, and indeed with juntice, that it was performed for the lands which they held from the crown of Endend; and they alleged, that it was as fin removed fiom any relation to a feaity or hemage rerformed for the crowi of Scothad, as the !omaje
paid by the linglifh monarchs to the crown of France Scotland. was remored from all relation to the crown of England. With regard to the homage paid by William king of Scotland to Henry II. of England, it was not denied that he performed it for the whole kingdom of Scotland: but they pleaded, that it was void of itfelf, becaufe it was extorted when William was a prifoner to Heary ; and they produced Richard I.'s charters, which pronounced it to have been compulive and iniquitous.

But, however urgent thefe reafons of the Scots might be, Edward was by no means dilipofed to examine into their merits. Infead of this, he clofeted the feveral pretenders to the crown; and having found them aill ready to comply with his meafures, he drew up the following charter of recognition to be figned by them all.
"To all who thalt hear this preient letter.
"We Florence earl of Holland, Robert de Bruce The candi lord of Annandale, John Bali: 1 lord of Galloway, John dates fign Haltings lord of Abergavenny, John Cummin lord of an affent. Badenoch, Pattick de Dunbar earl of March, John Vefci for his father Nitholas Soulis, and Williani de Rofs, greeting in the lord:
"Whereas we intend to parfue our tight to the kingdom of Scothand; and to declare, challenge, and aver the fame befire him that hath molt power, jurifdiation, and reafon to iry it; and the nuble prince Edward, by the grace of God king of England, \&c. having informed us, by gond an fufficienc reafons, that to him belongs the fovereign feigniory of the fame: We therelore promife, that we will h.ld firm and itable his at ; and that he flhall enjoy the realm to whom it fhall be adjudged before him. In witnefs whereof, we have fet our feals to this witing, made and granted at Norham, the Tuefday after the Afrenfon, in the year of Grace 129 I."

Edward then declared, by the month of his chancellor, that although, in the difpute which isas arifen between the feveral claimants, tuching the fuccelfion to the kingdom of Scotland, he acted in quality of fovereign, in order to render jultice to whomfoever it was due; yet he did not thereby mean to exclude himfelf from the hereditary right which in his own perfon he might have to that crown, and which right he intended to affert and improve when lie frould think fit: and the king himielf repeated this proteftation with his own meuth in French. The candidates were then feverally cal.ed upon by the Englifh chancellor, to know whether they were willing to acknowledge Edward's claim of fuperiority over the crown of Scotland, and to fubmit to his award in difpoling of the fame; which bsing anfwered in the affirmative, they were then admitied to prove their rights. But this was mere matter of form; for all the furce of England was then affembled on the borders in order to fuppore the claims of Edward, and nothing now remained but to furnifh him with a fufficient pretence for making ufe of it. He obfetved, that the Scots were not fo unanimous as they ought to be in recogni irg his fuceriority, and that the fubmifion, which had been furned by the calidat was not fuficieut to carry it into ex - amard by the candidates, was not fumicit to can bemands ecution; for whicla reafon he demarded tiat all the forts pofficion in Scotland fhould be put into his polietion, the the might "f all the refign them to the fucceffful cardidate.

85
which is azrcul to byetre flates.
compliance with this laft deman.t of Edward, the rege:cy of Scothand withoue hothation yielded to it atin; lor which they gie the following ratuns. "That wheres they (the thates of Sioothad) had, with one at: fent, alredy graned that Ki:ng Edward, as fupericr lurd of scuth:nd, ih whel give tenterice as in their feveral wighes and titles in the crow. of Sonthind, Sc. but as the finid king of England connot put his judgement in full execution to an iser effeatualy without the polfellim or feifin of the dail country dad its cathles; we will, grant, and alfem, that he, as fivereign lord therenf, to retinma the thing. aforelaid, th.th have feilion of all the lands and caftees in Scutland until right be done tu the demandants, and t we guardians lad community of the hingdorn of Scothand, in teftore boils it and it, caftes, wi-h all the \(r\) yalties, dignties, franchifes, cuftoms, rights, laws, uldare, and p lleffons, with the: appurtenances, in the fame thate and condition they were in when he received then, fiving to the king of Engl thit the homage of him that thall e king; io as they may be reft red within two months alter the day the righ, thall be determined ardaffruad; and that the pretus of the n.ation which that be received in the moan time thall be kept in the hands of the cham. berlai:1 of Sou-land that now is, and one to be joined with him by the king of Eagland; 1) as the charge of the \(g\) vernment, caltee, and officers of the redm, may be deducted. In witnels wherenf, ixe"

Fir thete reafons, as it is faid, the regency put into the hatas of Edward all the forts in the country. Cii. bert dc Umfreville alone, who had the command of the calles o Dundee and Forfar, retuiced to deliver th \(m\) up, until he fhnuld b. ndennified by the tates, ind by Edsard himielt, from all penalties of tredon of which be might affer xards \(\mathrm{b}=\) in danger.

But though Edward had thu, got into his hands the whole power of the tation, he dis no think proper to determine cvery. thing by his own authority. Intead of this he appointed coumblfoners, and mafed ow \&. rit letters-ps ent decianing that fentence thould be Mamed in Scolland. It had been all along forefeen that the great difpute would be \(\mathrm{b}=\mathrm{tw}\) een bruce and Baliol; and thougla the pleat of Cummin was jeriged frivolous, yet he was it inan of loo much influence to be negleeted, and he agreed tacitly to refig., it in tavour of Batlinl. Edward accurdingly made him the compioment of joining him with Baliul in nominating 40 commiffioners. Bruce was to name to more; and the names of the 80 were to be given in to Edward in chree days; after which the hing was to add to then \(2+\) of his own choofing. The place and time of meeting were left in their own option. They unanimoully pitched upon Bea wick for the place of mceting; bat as they could not agree about the time, Edward appointed the ad of Augult foliowing. Sonn after this, the regents refigned thair commiffions in Edward; but he returned them, with powers to act in his name; and he nominated the billop of Caithnefs to be chancellor of Scotland ; joinirg in the cummillion with him Walter de Hemondetham an Englithman, and one of his own fecretaries. Still, however, he met with great difficulties. Many of his own great men, particularly the eart of Gloucel: ter, were by no means fond of increafing the power of the Enjlifh monarch by the acquitition of Scotland; and therefore threw fuch oostacles in his way, that he
was again obliged to have recourfe to negociation and intrigue, and at hate to delay the mesting until the ad of Jure i:2 1292: but curing this interval, that he might the beiter reconsile the Scoss to the lofs of thetir liberey, lie propoled dia unisn of the wo kingdoms; :nn f. r this fe ilfied at whit by vistue of his faperioni' \(\because\).

The e manilioner, having mat on the fecind uf Juie 1292, ambalfiders for Nurway prelented themielves ia the aftembly, demanding that their mater fhou do be admitted into the number of the claimants, as fisther and next heir to the late theen. This demand too wa, admitted by Edward, after the amballadors had acknowledged his fupctivity over Scotland; after witich he propoced that the clains of Bruce and Batiol Creuld be previoufly eximined, but without prejulice to thefe of the wher compectit rs. 'This teing agreed to, he ordered the commifiuners to exami ie by what laws thes ought to proceed in forming their icport. The dicultion of this quellion was attended with fuch difficulcy, and the opinions on it were fo various, that Edward unce m re adjourned the alfiembly to the 12 th of Oatober following ; at which time he requied the members to give rieir ofimons on the two following pciats: 1. By what: laws and cuftoms they ougher to proceed to judgment; and, fuppoling there could \(b\) : mban or precedent found in the two kingdoms, in whit mann:r? 2. Wheth \(r\) the kingdom of Scotland ought to be taken in the fame wew as all other fiefs, and to b. awarjed in the lame manner as ealldums and bara: : ? The commutioncrs ic, lied, that Edward ought to gine jutice confumble to the ufage of the two hand inis; but that if no certain laws or precedents a ild not be \(f\) und, he might, by the advice of his great men, enut a new law. In affiver to the fecond quelti-n they "id, that the facceflion to the king dom might be awarded in the fame monner a; to wher eftates and oreat baruias. Upon this, Eidward ordered Lruce ury Bedioi to be called bu fore him; and brith of then urged their reficstive pleas, and anfisers, to the fillow. ing purpofe.
Bruce plended, i. That Alexander II. defpairing of heirs of his own b tr, had declared thit he held him to be the true heir, and offered to prove by the teitimuny of perrons ftill alive, that lee declared this with the at. vice and in the prefence of the good men of his kingdom. Alesander III. alfio had dechared to thofe with whom be was in imate, that, lailing iffue of his own body, Bruce was his right heir. The people of Sectland had taken an oath for maintsining the fuccerfion of the neareft in blood to Alexander 111. Who onght of right t, inherit, fuiling Margaret the Miden of Norway and her illue.-Balinl amliwer d, that nothing could be conclucted form the acknowledgrment of Alcsander II. for that he left heirs of his body; but made no anfwer to what was faid of the fentiments of Alexander III. and of the oath made by the Scottilh nation to maintain the fuscefficn of the next of blood.
2. Bruce pleaded, that the right of reigning ought to be decided according to the natural law, by which king; reign ; and not according to any law or ulage in forec between lubject and libjert: That by the law of nature, the neareft ectliteral in blood has a right to the crown; but the the con iitutions which prevail among valfals, bind net the lord, mith lefs the fovercign: That although in private isheritances, which
are oinhitis, the eldatt female heir has a certain pierogative, it is not to in a kingdom that is indivilible; there the nearel heir of blool is preferable whenever the fuccefion opens.- To this Baliul replied, that the clainmants were in the court of their lord paranmount ; and that he ought to give judgment in this cafe, as in the cale of any cher tencments, depending on his crown, that is, by the common law and ufage of his kingdom, and no other. That by the laws and ufages of England, the eldelt female heir is preferred in tlre liuccetlion to all inheritances, indivifible as well as divifible.
3. It was urged by Bruce, that the manner of fucceflion to the kingdom of Scotland in former times, mide for lais claim; for that the brother, as being near\(e l^{2}\) in degree, was wont to be preferred to the fon of the deceafed king. Thus, when Kenneth Macalpin died, his brother Donald was preferred to his fon Con. Itartine, and this was confirmed by feveral other authentic imtances in the hiftory of Scotland. Baliol antwered, that if the brother was preferred to the fon of the king, the example proved againft Bruce; for th. it the 111 , not the brother, was the nearelt in degree. He admitted, that after the death of Malcolm III. his brother ufurped the throne; but he contended, that the fon of Malcolm complained to his liege lord the king of England, who difpolfeffed the ufurper, and placed the fon of Malcolm on the throne; that atter the death of that fon the brother of Malcolm 1II. again tufurped the throne; but the king of England again dilpolfelfed him, and raifed Edgar, the fecond fon of Malcolm, to the fovereignty.
4. Bruce pleaded, that there are examples in other countries, particularly in Spain and Savoy, where the fon of the fecond daughter excluded the grandfon of the eldet daughter. Baliol anfwered, that examples from foreign countries are of no importance; for that according to the laws of England and Scotland, where kings reign by fucceffion in the dired line, and earls and barons fucceed in like manner, the iffue of the younger filter, although nearer in degree, excludes not the ilfue of the edelt lifter, although mure remote ; but the fucceffion continues in the dired line.
5. Bruce pleaded, that a female ought not to reign, as being incapable of governing: That at the cleath of Alexander III. the mother of Baliol was alive ; and as the could not reign, the kingdom devolved upon him, as being the nearett male heir of the blood royal. But 10 this Baliol replied, that Bruce's argument was inconfitent with his claim: for that if a female ought not to reign, lfabella the mother ci Bruce ought not, nor muit Bruce himielf claim through lier. Befides, Bruce himfelf had fiworn fealty to a female, the maiden of Norway.
Judgment given in \(f i-\) vour of \(\mathrm{Ba}-\) Lul,

The arguments being thus Aited on both fides, Edward demanded an anfixer from the council as to the merits of the competitors. He alfo put the follawing qualtion to them: Dy the laws and ufages of both kingloms, does the iffue of the eldefl fifter, though more semote in one degree, exclude the ilhue of the fecond filter, though nearer in one degiee ? or ought the nearer in one degree, ilfuing from the fecond fifter, to exclude the mure remote in one degree iffuing from the Adelt fifter? To this it was aniwered unamimoully, That by the laws and ufiges of both kingdoms, in every heritable fucceffion, the more remote in one de.
gree lineally defcended from the eldeft fifter, was pre- Scnthad. ferable to the nearer in degree ifluing from the fecond fifter. In confequence of this, Bruce was excluded from the fuccention; upon which he entered a claim for one third of the kingdom: but being baffled in this alfo, the kingdom of Scotland being determined an indivifille fee, Edward ordered John Baliol to have feilin of Scotland; xith this caveat, however, "That this judgnent fhould not impair his claim to the property of Scotland."

After fo many difgraceful and humiliating conceffions on the part of the Scots, John Baliol was crown, crowned ed king at Scone on the 3 oth November 1292 ; and Scone. finifhed the ceremony by doiug homage to the king of England. All his-fubmiffions, however, could not faiisfy Edward, as long as the lealt Thadow of indepen. dence remained to Scotland. A citizen of Bervick appealed from a fentence of the Scots judges appointed by Edward, in order to carry his caufe into England. Eut this was oppofed by Baliol, who pleaded a promife made by the Englifh monarch, that lie Thould "ob. ferve the laws and ufages of Scotland, and not with- Hauchiy draw any caufes from Scotland into his Englifh courts." behaviour Edward replied, that it belonged to him to hear the of Edward. complaints made againd his own minilters; and concluded with afferting his right, not only to try Scots caufes in England, but to fummon the king of Scotland, if neceffary, to appear before him in perfon. . Baliol had not fpirit to refift; and therefore figned a mof difiraceful inftrument, by which he declared, that all the obligations which Edward liad come under were already fulfilled, and therefore that be difclarged them all.

Edward now thonght proper to give Baliol fome marks of his favour, the mof remarkable of which was giving him feifin of the Ille of Man ; but it foon appeared that he intended to exercife his rights of fuperiority in the molt provoking manner. The firlt in. fance was in the cafe of Malcolm carl of Fife. This nobleman had two fons, Colban his heir, and another who is contantly mentioned in hiftory by the familyname of Macduff.-It is fuid, that Malcolm put Mac. duff in poffeffion of the lands of Reres and Crey. Mal. colm died in 1266 ; Colban his fon, in 1270 ; Dun. can the fon of Colban, in 1288 . To this latt earl, his fon Duncan, an infant, fucceeded. During the nonage of this Duncan, grand-nephew of Macduff, William bithop of St Andrew's, guardian of the earldom, difpoffefled Macduff. He complained to Edward; who laving ordered his caule to be tried, reftored him again to polfefion. Natters were in this ftate when Baliol held his firf parliament at Scone, roth February 1292. There Macduff was cited to aniwer for laving taken pofieflion of the lands of Reres and Crey, which were in poffeffion of the king fince the death of the laft eatl of Fife. As his defences did not fatisfy the court, he was condemned to imprifonment ; but an ation was referved to him againft Duncan, when he fhould come of age, and againt his heirs. In all this defence, it is furprifing that Macduff flould have omitted his ftrongeft itgument, vi\%, that the regents, by Edward's ituthority, had put him in pofeffion, and that Ealiol had ratified all things under Edward's authority. However, as foon as he was fet at liberty, he petitioned Baliol for a rchearing; but this being refufed, he appealed
\(\underbrace{\text { Scolln! }}\)
91
He lumimons italiol to appear before hith.
to Edward, who ordered Baliol to appear Lefore him in perfon on the 25 th of March 1293 : but as Balliol did not cobey this crder, he fummoned him again to ap. Fear on the 14 th of Odober. In the mean time the Englith parliamont drew up certain flandix:g orders in cales of appeal from the king of Scuts; all of which were harlb and captiou*. One of thefe regulations provided, "that no excufe of abfence thrould ever be ieceived cither from the appellant, or the king of Scutland refpendent; but that the parties might have coun. fel if they demanded it."

Though Baliol had not the courage to withf ind the fecond fummons of Edward, he behaved with conlider. able refolution at the trial. The caufe of Macloft being come on, Edward afked Batiol what he had to offer in his own defence; to which he replied, "I am king of Scotland. To the complaint of Macduff, or to ought elfe refpenting my kingdom, I dare not make anfwer without the advice of ms people." - Edward affected furprife at this refufat, after the fubmiffions which Bahol had already made him ; but the latter neadily replied, "In matters refpecting my kingdon, I neither dare nor can anfwer in this place, without the advice of iny people." Edward then detired him to afk a further adjournment, that he might advife with the nation. But Bolin, percciving that his doing fo would imply an acquiefcence in Edward's right of rcquiring his perfonal attendance on the Englith cousts, made antiver, "That he would neither afk a longer day, ner confent to an adjournment." -It was then iefolved by the parliament of England, that the king of Scotland had offered no defence ; that he had made evafive and difrefpectful anfwers: and that he was guilty of manifelt contempt of the court, and of open dif. obedience. To make recompenfe to Macduff for his imprifonment, he was ordered damages from the king of Scots, to be taxed by the court; and it was alto determined that Edward thould inquire, according to the ufages of the country, whether Macduff recovered the tenements in quellion by the judgment of the king's court, and whether he was difporeifed by the king of Scots. It was alio selolved, that the three principal caltes of Scotland, with the towns whicrein they were fituated, and the royal juriddiction thereof, fhould be taken into the cuflody of the king, and there remain unt. the king of Scots flould make fatisfaction for his contempt and difobedience. But, before this judgment was publicly intimated, Baliol addrelled Edward in the following words: "My lord, I anı your licge man for the kingdon of Scotland; that, whereof you have late. ly treated, refpetis my penple no lefs than nyyelf: I therefore pray you to delay it until I have confiulted my people, lett I be furprifed through want of ad. vice: They "lo are now with me, neither will nor dare advite me in abfince of the reft of my kingdom After I heve advifed with them, I will in jour tirf parlament afier Eatler report the refult, and do to jou what I onght."

In confequence of this addrefs, Edward, with crafent of Macduff, topped all proceedines till the day after the fealt of Trinity : 29+. Dut before this term F.dwand was obliged to fufpend all proccedings againt the Scots, by a war which broke nut with France. In a parliament held this year by Edward, the king of Scotland appeared, and contented to yield up the whole re-
venues of his Englifh efates for three years to a aint
Edward acainat lis cnemw. He was a!!o requalid and credered by Edwatd to extend an cmburgn laid upon the Englith veffels all over Scotland; and this en.b.urgo to candure until the king of England's futher p'eafure thould be kiow: He alfo requelled him to fend frome troops for an expedtion into Gufcony, and required the prefence and tid of feveral of the Scotill baron for the fime purpofe. The Scots, however, elujed the The Seote commands of Edward, by pretending that they could an aldiance not loring any confiderable force into the field; and, with unable to bo:tr his tyramy s.ny longer, they negncia:ed an alliance wihh philip king of France. Having affembled a parliament at Scone, they prevailed upon Baliol to difmifs all the Fengliftmen whom he maintained at his court. They then appoinied a committec of twelve, four binhop;, four earis, and four barons, by whofe advice every thing wals to be regulated; and, if we may credit the Englifh hiforians, they watched the conduet of Patiol himeif, and detairicd him in a kind of honourabic captivity. Howcer, they could not prevent hirn from delivering up the calles of Berwick, Roxburgh, and Jedburgh, to the bifhop of Carlifle ; in whofe cuflody they were to remain during the war between England and France, as a piedge of his allegiance. Notwithfanding this, Baliol concluded the alliance with Philip; hy which it was flipulated, that the latter thould give in marriage the eldeft danghter of the count of Anjous to Baliol's fon; and it was alfo provided, that lialiol fhould not marry again without the confent of Philip. The king of Scotland engaged to aftift Philip in his wais at his own expence, and with lis whole power, efpecially if Edward invaded Fratice; and Philip on his part engaged to affit Scotland, in cafe of an Englifh invafion, cither by making a diverfion, or by fending fuccours.
Puffed up with the hopes of affinance from France, the Scots invaded Cumberland with a mighty army, and lad f.ege to Carlifle. The men abandured the \(p^{\prime}\) 'ace ; but the women mommed the walls, and drove the alfiilants from the attack. Another incurfion into Nortinumberland proved almof as difgraceful. Their whole exploits corfifted in burning a numnery at Lameley, and a monaRery at Curebridge, though dedicated in their patroal St Andrew; but having attempted to Horm the cafle of Harbot:le, they were repulied with lofs. In the mean time Edward, with an army equal in number to that of the Sents, but much fuperior on account of its difcipline, invaded the calf coall of Scotland. Berseick had either not been delivered according to promife, or had been refumed by the Scots, and was nor- defended by a numerons garrifon. Edward alfaulted it by fea and lind. 7 the lhips which began the astack were all either burnt or difabled; but lijward having lad on his army in perfon, took the place hy Ciser thy
norn, and crnelly butclered the inhabsans, to the Edward forn, and crnells butcleered the inhab anms, to the Ledwarh number of 8000 , withent ditimglion of fex or arg. In tais town there was ob building called the R-Vloclit which certain Filemints proferfed by the temure ni def.nding it at all tines againf the king of Encland. Thirty of thete mairtumed their greund fir a whole day againf the Englith army; but at right the building heing fet on fire, all of \(t i\) em perithed in the flames. The fame day the caltle capitulated; the garvifon, cunfiking of 2000 men , mirched out with all the honcurs.

Sintling. of war, after having fworn never to bear arms againft 93
Bahol's re- la the mean time, Baliol, by the advice of his parnunciation liament, folemnly and openly renounced his allegiance of his allce to Edward, fending the following declaration.
"To the magnificent primee, Edward, by the grace of God, king of England; Join, by the fame grace,
king of Scotland.
"Whereas you, and others of your kingdom, you not being ignorant, or having caute of ignorance, by your violent power, have nutorioufly and frequenly done grierous and intolerable injuries, contenipte, grevances, and ftrange damages againt us, the liberties of our kingdom, and againit God and jultice ; citing us, at your pleafure, upon every hight fuggeition, out of our hingde m; unduly vexing us; leizing our caftes, lands, and pollelions, in your kingdom; unjutly, and for no fault of ours, taking the goods of our fubjects, as well by fea as land, and carrying them into your kingdom; killing our merchants, and orhers of our kinguom; carrying away our fubjects and imprioning them: For the reformation of which things, we fent our meffengers to you, which remain not only unredreffed, but there is every day an addition of worfe things to them ; for now you are come with a great arny upon the borders, for the difinheriting us, and the inhabitants of our kingdom; and, proceeding, have inhumanly committed 1 iughter, burnings, and violent invafions, as well by fea as land: We not being able to fuftain the faid injuries, grievances, and damages any longer, for to remain in your fcalty or homage, extorted by your violent oppreflion, we reftore them to you, for ourfelf, and all the inhabitants of our kingdon, as well for the lands we hold of you in your kingdom, as for your pretended government over us."

Edward was prefented with this renunciation by the hands of the intrepid Henry abbot of Aberbrothwick; and as it was favourable to his political views, he received it rather with contempt than anger. "The foolifh traitor," faid he to the abbot, "fince he will not come to us, we will go to him." The abbot had been perfuaded by his enemies, of whom he had many is Scotiand, to prefent this letter, in hopes that Edward would lave put him to death; but he had ad. drefs enough to efcape fafe out of his hands, without receiving any other anfwer.

Though this fcheme of renunciation had been con- Scontand. certed fome time before, the declaration was not fent to Edward till after the taking of Berwick. The fate of Scotland, however, after it, was foon decided. The Earl of March had t.iken part with Edward, but the countefs betrayed his callle of Dunbar into the hands of the Scots. Edward fent a cholen booy of troops to re. cover the place. The whole force of Scotland oppofed them on the heik; above Dunbar; but leaving their aivantageous polt, and pouring down on their enemies in confifion, they were difperfed and defeated.

The callle of Dunbar furrendered at difcretion ; that of Roxburgh followed the fame example; the caftle of Edinburgh furtendered after a thort fiege; and Stirling was abandoned. The Scots, in the mean time, were gnilty of the greatelt extravagances. During the thort interval between the lofs of Berwick and the defeat at חunbar, an order was made for expelling all the Englifin ecclefiatitics who !eld benefices in England; all the purtizans of England, and all neutrals, were declared trators, and their eftates confifided. But the great fuccefles of Edward foon put an end to thefe impotent atts of fury. B.aliol was obliged to implore the mercy of the conqueror. Divefted of his royal ornaments, and bearing a white rod in his hand, he performed a mof humiliating penance; confelling, that by evil and falfe counfel, and through his own timplicity, he had grievoufly offended his liege lord. He recapitulated his various tranfgreffions, in concluding an alii.nce with France whle at enmity with England; in contracting his fon with the niece of the French king ; in renouncing his fealty; in attacking the Englifh territories, and in refifing Edward. He acknowledged the juftnefs of the Englifh invafion and conqueit ; and therefore he, of his own free confent, refigned Scotland, its penple, and their homage, to his liege-lord Edward, 2d July 1296.
The king of England purfued his conquelts, the barons everywhere crowding in to fwear fealty to him, and renounce their allegiance with France. His jour- seotland ney ended at Elgin, from whence he returned fouth. fublued. ward; and, as an evidence of his having made an abiolute conqucit of Scotland, he carried off from Scone the wooden chair in which the kings were wont to be crowned. This chair had for its bottom the fatal Rone regarded as the national palladium (D). Some of the charters
(D) "This fone is thus defcribed by W. Hemingford, T. i. p. 37. "Apud monafterium de Scone pofitus erat lapis pergrandis in ecclefia Dei, juxta magnum altare, concavus quidem ad modum rotundue cathedre confectus, in quo futuri reges loco quafi coronationis ponebantur cx more. Rege itaque novo in lapide pofito, miffarum folemnia incepta peraguntur, et præterquam in elevatione facri dominici corporis, femper lapidatus, manfit." And again, T. i. p. 100. "In redeundo per Scone, precepit tolli et Londoniis cariari, lapilem illum, in quo, ut fipra dictum ef, Reges Scotorum follebant poni loco coronationis fux et boc in fignum reg ni conquefit et refignati." Walfinglam mentions the ufe to which Elward put this fone: "Ad Weftm nafterium trantulit illum, jubens inde fieri celebrantium cathedram facerdotomn." This account of the fatal fone is here tranfcribed, that it may be compared with the appearance of the fone that now bears its name at Weftminfer.

Fordun lias preferved the ancient rhymes concerning it; L. xi. c. 25 .
"Hic rex fic totam Scotiam fecit fibi notam,
Qui fine menfura tulit inde jocalia plura,
Et pariter lapidem, Scotorum quem fore fedem
Regum decrevit fatum; quod fic inolevit,
Ni fallat fatum, Scoti quocunque locatum
Invenient lapidim, rcgnarc tenentur ibiden."

\section*{S C O}
charters bclonging to the abbey were carried off, and the feals torn from others: " which," fays Lord H.tiles, " is the only well-vouched cxample which I have fornd of any outrage on private property commitred by Edward's army. It is mentioned in a charter of Robert 1. and we may be affured that the outrage was not diminilhed in the relation."

On the 28 th of Auguft 1296 , Edward held a parliament at berwick, where he received the fealty" of the clergy and laity of Scotland. It is faid, that while the Englilh monarch was empluyed in the conquef of Scotland, he had promifed the fovereignty to Robert Bruce, lord of Añnandale, in order to fecure his fidelity; but being put in mind of his promife, he anliwered, "Have I no other bufinef's but to conquer kingdoms for you?" Bruce filently retired, and patfed his days in obfcurity: Among thufe who profeffed their allegiance at this parliament was Robert Bruce the younger, earl of Carrick. After this, Edward took the mott effectual methods of fecuring lis new conquell. He ordered the eftates of the clergy to be reflored; and having received the fealty of the widows of many of the Scottifh barons, he put them in poffertion of their jointure-lands, and even made a decent provition for the wives of many of his prifuners. Yet, though in every thing he behaved with great moderdtion towards the Scots, he committed the government of certain diftricts, and of the chief caftes in the fouth of Scotland, to his Englifh fubjects, of whofe fidelity and vigilance he thought himfelf athured. In order to conciliate the affections of the clergy, he grinted to the Scottith bifhops, for ever, the privilege of bequeathing their effeets by will, in the fame manner as that privilege was enjoyed by the archbithops and bifhops of England. In honour of the "glorious Confelfor St Cuthbert," he gave to the monks of Durham an annual penfion of 40 pounds, payable out of the revenucs of Scotland, by the tenure of maintaining, belore the flrine of the faint, two wax-tapers of 20 pounds weight each, and of diffributing twice a-year one penny each to 3000 indigent perfons. At laft, having fettled every thing, as he thought, in tranquillity, he departed for England, with all the pride of a conqueror.

The tranquillity eftablithed by Edward, however, was of fhort duration. The government of Scotland at that time required many qualities which Edward's vicegerents had not. Warrenne, earl of Surry, who had been appointed governor, took up his abode in England, on pretence of recovering his health. Crellingham, the treafurer, was a voluptuous, prond, and fe! fich eccleliaftic; while Ormefby the jufticiary was hated for his feverity. Under thefe officers the adminiftration of Edward became nore and more feeble; bands of robbers infefted the highways, and the Englifh government was univerfally defpifed. At this critical moment arofe Sir
\(\$\)-otlan'.
he was the younger fon of a gentleman (Wallace of s:orlan?. Elleafie) in the neighbourliood of Patley. Having been outlawed lur fome offence (getacrally fuppoied so have been the kilting of an Englithman), he affuciated with a few companions, of fortumes equally defperate with his owtt. Wallace himfelf was endowed "i:h great Itrength and courare, and an actwe and ambitious lpirit ; and by his affobility, eloquence, and wifiom, le maintaned an authosity over the rude and undifciplined multitudes who flocked to his fandard. In May 1297 he began to infett the Englith quarters; and being luc. cefoful in his predatury incurtions, his pariy became more numerous, and he was joined by Sir William Douglas. With their united forces, there two alies attempted to furpritc Ormefoy the jufticiary, while he held his courts at Scone; but he laved himielf by a precipitatc flight. Alter this the Sicots roved over the whole country, allauled caftles, and mallacred the Englifh. 'Ilteir patty was joined by many perfons of rank; among whom were Kobert IVitheart bifhop of Glafgow, the Steward of Scotland and his brother Alexander de Lindray, Sir Richard Lundin, and Sir Andrew Moray of Bothwell. Young Bruce would have been a valt acceffion to the party ; lor he polfelfed all Carrick and Annandale, fo that his territories reached from the frith of Clyde to Solway. But the war. dens of the weftern marches of England fufpected his fidelity, and fummoned him to Carlille. He obeyed, and made oath on the confecrated hoft, and on the fword of Becket, to be faithful and vigilant in the caule of Edward; and to prove his fincerity he invaded with fire and fword the eftate of Sir William Douglas, and carried off his wife and children. However, he inft intIs repented of what he had done: "I truft (faid be), that the pope will abfolve me from an extorted oaill;" on which he abandoned Edward and joined the Scottifh army.

All this time Edward was in France, not in the leall fufpecting an infurrection among pecple whom he ima. gined he had thoroughly fubdued. As foon as he received the intelligerce, he ordered the eatl of Surry to fupprefs the rebcls; but he declining the command ot the army himfelf on account of his healih, religned it to his nephew, Lord Henry lerey. A great army, Ditentions fome fay no fewer than 40,000 men, was now allembled, of the with which Percy marched agsint the Scots. He Scots. found them encamped at Irwin, with a lake in their front, and their flanks fecured by entrenchments, io that they could not be attacled without the utmolt danger. The Scots, however, ruined every thing by their diffenfions. Wallace was envied on account of his accomplithments, which had raifed his reputation above the other officers, whofe birth and circumalances were higher than his. His companions accordingly became jealous, and began to fuggelt, that an oppolition in the Englifh could oniy be produsive of farther national defruction. Sir Richard Lundin, an officer of great rank, formed a party againf Wallace, and went over to Edward with all his fullowers. He attompted to jufty \(513=\)

\footnotetext{

}

Scerland. his treachery, by farying, "I will remain no longer of "a party that is at variance with itfelf ;" without confidering that he himfelf, and his party, were partly the oecation of that varimee. Other leaders entered into a negociation with the Englifh. Bruce, the Steward and his brother Alcxander de Lindefay, and Sir William Douglas, acknowledged their offences, and made fubmillions to Edward for themfelves and their adhe-
the caftle of Dundee, he was informed that the Eng. lifh army approached Stirling. Wallace, having charged the citizens of Dundee, under the pain of death, to continue the block:ade of the caftle, haftened with all his troops to guard the important palfage of the Forth ; and encamped behind a rifing ground in the neighbourhood of the abbey of Cambukenneth. Brian Fitz-A1lan had been appointed governor of Scotland by Edward; but Warenne, whe wated the arrival of his fueceffor, remained with the army. Inagining that Wallace might be induced by fair means to lay down his arms, he difputched two friars to the Scottifh eamp, with terms of capitulation. "Return," faid Wallace, "and tell your malters, that we canme not here to treat but to affert our right, and to fet Scotland free. Let them advance, they will find us prepated." The Eng. lifh, provoked at this aniwer, demanded impatiently to be led on to battle. Sir Richard Lundin remonfrated againt the abfurdity of making a numerous army pals by a long narrow bridge in preience of the enemy. He told them, that the Scots would attack them before they could form on the plain to the north of the bridge, and thus certainly defeat them: at the fame time he offered to fhow them a ford, which having crofled with 500 hore, and a chofen detachment of infantry, he propofed to come round upon the rear of the enemy, and by this diverfion facilitate the operatio:s of the main body. But this propofal being rejected, the Englith army began to pafs over; which was no fooner perceived by Wallace, than he rufhed Jown upun them, and broke them in a moment. Crefinghan the treafurer was killed, and many thoufands were flain on the field, or drowned in their flight. The lofs of the Scots would have been inconfiderable, had it not been for that of Sir Andrew Moray, the intimate friend and companion of Wallace, who was mortally wounded in the engagement. The Scots are faid to have treated the dead body of Creflingham with the utmolt indignity; to have flead him, and cut his ikin into pieces, which they divided among themfelves; while others tell us, they ufed it for making girths, and faddles.

The vittory at Stirling was followed by the furrender of Dundee cafle, and other places of ftength in Scotland; at the fame time the Scots trok poffeflion of Berwich, which the Englifh had evacuated. But as a famine now took place in Scotland by the bad feafons and miferies of war, Wallace marched with his whole army into England, that he might in fome meafure relieve the neceffities of his counirymen by plundering the enemy. This expedition latted three weeks, during which time the whole tract of country from Cockermouth and Carlife to the gates of Newcafte was laid wafte with all the fury of revenge and rapacity ; though Wallace endeavoured as far as pofible, to reprefs the licentiournefs of his foldiers.

In 1298 , Wallace affumed the title of "Governor of Scotland, in name of kine John, and by confent of the Scottif nation;" but in whit manner this office was obtained, is nuw in a great meafure unknown. In a pariament which he convoked at Perih, he was confirmed in his authority : and under this titie he conferred the contabulary of Dundee on Alexander furnamed Skrimgeour and his heirs, on account of his faith.ful aid in bearing the royal ftandard of Scotland. This.
grant

\section*{sco}

Scotland. grant is faid to have been made with the confent and ap103 Jealoufy betwecn Wallace and the barons. probation of the Scnttifh nobrlity, 29th March 1293. From this period, however, we may date the very great jealoufy which took place between Wallace and the nobles who pretended to be of his party. His elevation wounded their pride ; his great fervices reproached their inactivity in the public caufe; and thas the counfels of Scotland were perplexed with diltruft and envy, when almoft its very exiltence depended on unamimity.

In June 1298, Edward, who had all this time been in Flinders, returmed to England, and fummonal the Scottifh barons, under pain of rebellion, to attend him in parliament; and, on their difuesing his fummons, he advanced with his army towards Scotland. His main furce, commanded by hiurilf, alfembled at Derwick; but a body of trucps, un ler the earl of Pem. broke, having landed in the north of Fife, we:e defeated with great lofs by Wallace, on the 12 th of June. The fame month Edward invorded Scotland by the way of the eallern borders. No place refited him except the callie of Dirleton. After a selolute defence, it fur- rendered to Anthony Beck, bithop of Durham.

Me:nwhile the Stors were alfembling ail their Atrengets in the interior part of the coumtry. Few baruns of eminence repaired to the national thandard. They whote names are recorded, were John Comyn of Badenoch, the gounger; Sir Jihn Stewart of Bonkill, brother to The Steward; Sir Joha Graham of Abercorn; and Macduff, the grand-uncle of the young earl of F.fe. Robert Bruce again accedid to the Scottith party; and with his foll. wers guarded the imporiant caltle of Air, which kept the communication open with Galloway, Argylehire, and tle ifles.

The aim of Edward was in penetrate in:o the wett, and there to terminate the war. He appointed a fleet, wich provili ns, :o proceed to the frith of Clyde , and await his arrival in thofe parts. This precaution was abfolutely necelfary for the fubfinence of his numerous army in a country impoveribed and walte.

Waitiag for accounts of the arrival of his fiect, he eftablifhed his head-quarters at Templeliflon, between Edinburgh and Linithgow.

A dangerous infirreftion arnfe in his camp. He had bettowed a donative of wine among his foidiers; they became inonxicated; a national quarrel cufned. In this tumule the Welch New is Englith eceleliallics. The Englifh horiemen rode in aniong the Welch, ans reveriged this outrage with great il ushter. The Weleh in difgult feparated themfelves tom the army. It was reported to Edward, that they had mutinied, and gene over to the Scots: "I care not," faid Edward, difo fembling the danger; "let my enemies go and jow my enemies; I trult that in one day I thall chattife them all."

Edward was now placed in moft critical circumftances. As the fiet with rovifions had been detained by contrary wind, he could not venture to adrance, neither could he fublift any loriger in his preient quarters. T'o re:reat would have fullied the glory of his arms, and expofed him to the obloquy and mumars of a difoontented people. Yet he fubmitied to this hatd neceflity. Abandaning every profpeit of ambition and revenge, he commar ded his army to retirn to the eattern botcers. At that moment intelliger ce arrived that the Scots were advanced to Falkirk.

Edward inftantly marched againf inem. His army
Seotiant: lay that night in the fiedds. While Edward ilept on the ground, his war-horfe fruck him and breke two of his ribs. The alarm arofe, that the king was wounded. 'They who knew not the caufe, repeated the cry, "The king is wounded ; there is treafon in the camp; the enemy is upon us." Edward mounced on horfeback, and by hi- prefence difpelled the panic. With a furtitude of feirit fuperior to pain, he led on his trorpi. At break of diy, the Scottifh army was deferied, forming on a fony field at the fide of a fmall eminsnce in this neighbourlood of Ealkish.
Wallace ranged his infantry in four bolies of a circular form. The archers, commanded by Sir John Stewart, were placed in the intervals. The horfe. amounting to no more than a thouland, we:e at fome dillance in the rear. On the frent of the Sents lay i mordis. Having drawn up his troops in this order, Wall ice pleafintly faid, "Now I have brought you to the ring, dance according to your fisill."
Edward placed his chicf contidence in the numerous and formidable brdy of horfemen whom he had felected for the Sentifh expedition. Thefe the ranged in three lires. The firf was led by Bigot eatl Marthal, and the carls of Hercford and Linceln ; the fecond by the bilhop of Durham, having under him Sir Ralph Baftet of Drayton ; the third, intended for a referve, was led by the king himfeif. No mention is made of the di:polition of his infantry : it is probible that they were drawn up behind, to fupport the cavalty, and to annoy the Scots with their arrows and other mifilie wedpoms.

Bigot, at the head of the firt line, rufled on to the charge He was checked by the morals, which in his imperuofity he had overlooked. This :bliged him to incline to the folid grourd on hi, leit, owards the right flank of the Sootuharmy The bihp of Durham, who led the feennd line, inclined to the ri. ht, turned the morali, nd a franced towards the le. think of the Sc rilh a ms. He propofed to hall till the reforve fhruld idra.ce. "Tomifs, bifhop," cried Daliet, and inla, ity charged. The flock of the Englifh cavaliy on cacl: fide was violent, and gailantly wit. alloud by the Scotifh infantory ; but the Sontilh cavalry, dimayed at the nunber and force of the Enylifh men-at arms, immediately quit:ed the field Sicwart, whle givin: orders th his archers, wis thoown form hiv porie anid nain. His archers crowded round his bredy in ferithed with him. Oten did the Englifh Itrive to ! ice tl e Sentifh circle. "They cruid not penerdes into that wond of fpears," as one of their hillorians fieak: By uleferato repeated chatges, the outermoft :anks wite broughr tu with grat the ground. The Englith iriantey incellimely grallal niughes. the Sents with thowers of Ronus and arrows. Marenff and Sir John Grabam fell. At length the Sonts were broken by the numbers and weight of the Englifly cat valry, and the rout became univerfal.

Tine number of the Socts flain in this battle mart have been very graat. As is commonly the c.fe, it is exay. gerated by the hitorians ol the : Aore, and reduced too fuw by the liforians of the vanquifed.

Oa the fide of the Englifh the lefo was insonfuleralule. The only perfons of mote who fell weac Brian le J.ty, mater of the Englin 'remp'ass, atd the prior of Torprichen

Coullant.
phichen in Scoilnd, a knight of another order of religions foldiery ( E ).

The Scoss in their retreat bumt the town and cafle of Stirling. Edward repairce the calte, and made it a place of arms. Ife then marched to the weft. At his appraach, I3ruce burnt the caftle of Ayr, and retired. Edward would have purfued him intn Carrick; but the want of provifions topped his further progrefs. He turncd into Annandale, took Bruce's catte of Lochmaben, and then deprasted out of Scotland by the weftern borders.

Here may be remarked the fatal precipitancy of the Scots. If they had fludied to procract the campaign, inftead of hazarding a general action at Falkirk, they would have foiled the whole power of Edward, and reduced him to the neceflity of an inglorious retreat.

In 1299 Edward thought proper to releafe John Baliol the unfertunate king of Scotland, whom he had kept clofe priioner ever tince the year 1296. Before this time Baliol hat ufed the mon difgraceful methods to recover his liberty. He had folemnly declared, that " he would never have any intercourfe with the Scots; that he had found them a falle and treacherous people; and that he had reafon to fufpect them of an intention to poifon him." However, notwithftanding all his proteftations, Edward fill detained him in captivity ; but at laft releafed him at the mediation of the pope, though after a fingular form: He ordered the governor of

Dover to convey him to the French coaft, and there to deliver him to the papal nuncio, "with fuil power to the pope to difpole of Baliol and his Englifh eltate." In coniequence of which he was conveyed to Witfand, delivered to the nuncio in prefence of a notary and witneffes, ind a receipt taken for his perfon. Notwith. ftanding this abject fate, however, the Scots continued to own him for their king, and to affert their national independency. Tho' the misfortune at Falkirk had deprived them of a very conliderable extent of territory, they were ftill in poffellion of the whole country beyond the Forth, as well as the county of Galloway. By general confent William Lamberton bifhop of St Andrew's, Robert Bruce earl of Carrick, and John Cum\(\min\) the younger, were chofen guardians of Scotland in name of Baliol. Wallace at this time was reduced to the condition of a private man; nor had he any longer the command of the Scots armies, nor any fhare in their councils. - The new guardians undertook to reduce the caltle of Stirling, and Edward prepared to defend it. The Scots pofted themfelves at the Torwood, and chofe their ground judicioufly, fo that Edward could fearce Edward their ground judicioully, fo that Edward could farce obliged to have raifed the fiege without diflodging them; which retire. finding it impoffible for him to do, he returned home in difguft. Next year he invaded Scotland on the weft fide, wafted Annandale, and reduced Galloway; but the Scots being now taught by experience to avoid a general action, chofe their pofts with fuch kill, that Ed-
( \(\varepsilon\) ) "This account of the action at Falkirk, extracted from Lord Hailes's Annals, is drawn, his Lordfhip informs us, from the teftimony of the Englifh hiftorians. "They have done juftice (he obferves) to the courage and Ateadinefs of their enemies; while our hiftorians reprefented their own countrymen as occupied in frivolous unmeaning contefts, and, from treachery or refentment, abandoning the public caufe in the day of trial.
"It would be tedious and unprofitable to recite all that has been faid on this fubject by our own writers from Fordun to Abercrombie. How Wallace, Stewart, and Comyn, quarrelled on the punctilio of leading the van of an army which ftood on the defenfive: How Stewart compared Wallace to 'an owl with borrowed feathers': How the Scottifh commanders, bufied in this frivalous altercation, had no leifure to form their army: How Comyn traiteroufy withdrew with 10,000 men: How Wallace, from refentment, followed his example: How by fuch difafrous incidents, the Scottifh army was enfeebled, and Stewart and his party abandoned to deftuction. Our hiftories abound in trafh of this kind: There is fcarcely one of our writers who has not produced an invective againt Comyn, or an apology for Wallace, or a lamentation over the deferted Stewart. What difenfions may have prevailed among the Scottifh commanders, it is impoffible to know. It appears not to me that their diffenfions had any influence on their conduat in the day of battle. The truth feems to be this: The Englith cavalry greatly exceeded the Scottifh in numbers, were infinitely better equipped and more adroit : the Scottifh cavalry were intimidated, and fled. Had they remained on the field, they might have preferved their honour ; but they never could have turned the chance of that day. It was natural, however, for fuch of the infantry as furvived the engagement, to impute their difafter to the defection of the cavalry. National pride would afcribe their flight to treachery rather than to pufillanimity. It is not improbable that Comyn commanded the cavalry: lience a report may have been fpread, that Comyn betraged his country; this report las been embellifhed by each fucceffive relator. When men are feized with a panic, their commander muff from necelity, or will from prudence, accompany them in their flight. Earl Warrenne fled with his army from Stirling to Berwick; yet Edward I. did not punifh him as a trator or a coward.
"The tale of Comyn's treachery, and Wallace's ill-timed refentment, may have gained credit, becanfe it is a pretty tale, and not improbable in itfelf: but it amazes me that the ftory of the congrefs of Bruce and Wallace after the battle of Falkirk fhould have gained credit. I lay afide the full evidence which we now poffefs, 'that Bruce was not, at that tine, of the Englifh party, nor prefent at the battle.' For it muft be admitted, that our hiflorians knew nothing of thofe circumftances which demonfrate the impoffibility of the congrefs. But the wonder is, that men of found judgment fhould not have feen the abfurdity of a long converfation between the conmander of a flying army, and one of the leaders of a vitorious army. When Fordun told the fory, he piaced a 'narrow but inacceffible glen' between the fpeakers. Later hiforians have fubftituted the river Carron in the place of the inacceffible glen, and they make Bruce and Wallace talk acrofs the river like two young declaimers from the pulpits in a fchool of rhetoric."
scotland. ward could not penetrate farther; and the fame year a truce was concluded wi ha the Scots, to continue till Whitfurday 1301 .

II4
The crown This year a now competitor appeared for the crown of Scoland of Scotland. Boniface VIII. in a buil directed to Ed. clamed by ward, averred, that Scotland belonged anciently, and Pope Beni- did fill belong, to the holy fee; and fupported his exsace VIII.

155
His jretes: fions allfwered hy Edward and his parliament. travagant claim by fome flrange authorities; fuch as, that Scocthand had been miraciloully converted by the relics of St Andrew : :ffer which he proceeded to thow the fullity ot EJward's pretenfions, and that Scotlind never hadd any feudal dependence on England. He required Edward to fet at liberty all the Scottilh eccletiattics, particularly Willeart bifhop of Glifgow, and to remove his officers from the patimony of the church : " But (added he) flhould you have any pretentions to the whole, or any pat of scutland, fend your pr. Cors to me within fix months; I will hear and deternine according to juffice; I take the caufe under iny own peculiar cugnzanuce."
This intal pofition of the pope had probably been procured by Scontifh eminitries at the court of Rome; but, however ridiculous his pretentions might be, they aftoided matter of very ferious confideration to Edward. After fpending a whole winter in deliberations, Edward and his parliament male feparate anfwers to the pope. The anfiver of the parli.ument was to the following purpofe: All England knows, that ever tince the firft eitablithment of this kingdom, our kings have been liege.Jords of Scotland. At to tine has the king. dom of Scotland belonged to the church. In tem. porals, the kings of Eingland are not amenable to the fee of Rome. We have with one voice relilved, that, as to temporals, the king of Eugland is independent of Rome ; that he thall not luffer his independency to be quellioned; and therefore, that he fhall not fend conmifili ners ti) Rome. Such is, and fuch, we truft in God, ever will be, our opiniton. We do not, we cannot, we mult not, permit our king to follow neafures fubverfive of that government which we have fworn to m.intain, and which we will maintain."

The king entered into a more full refutation of the pope's arguments; and having, as he thought, anfwered them fufficiently, he marched again into Scotland: but, by the mediation of France, another t:uce wds concluded, to latt till St Andrew's day I 302 .

After the expiation of the truce, Edward fent an army into Scotland, under the command of John de Scgrave. This general divided his truops into three bodies; but, heeping them fof far diftant that they could not fupport each other, they were all engaged and defeated in one day by the Scnts, near Rolitin (fee RosLiN). This, however, was the laft fuccefsful exploit of the Scets at this petiod. The pope deferted them; and the king of Frince concluded a peace with England, in wi: \(i: 1\) all mention of the Scots was indultrioully avoided ; fo that they were left alone to bear the whote weight of Edward's refentment, who wow invaded thcir country in perion wi ha mighty army. He met with no refillance in his progrefs, except from the cafte of Brechin, which was conimanded by Thomas Maul, a brave ind experienced fficer. He held out for 20 days againt the whole power of the Englifh army ; but at laft, being mortally wounded, the place capitulated.

Three bodies of the Inglifh defeated in one day.

From thence he proceeded northward, according to fome hillorians, as far as Cilithofs. He then returned towards the fouth, and wistered in Dunfernilene. In that place there was an abbey of the Eicredictive corder, a building fo facious, that, according to an Englith hitterian, three fovereign ptinces with all their retinue might have been lodged conveniently within its precircts. Here the Scottith nobles fomenmes held their allemblies. 'The Englith foldiers uttelly demo. lifhed this magnificent fabric.

The only fortrefs that remained in the puffeffion of the Sicots wats the caftle of Stirling, where Sir WI lliam Oliphant commanded. 'To protef this dinzle place of icfuge, Comyn allimbled all his forces. He polted his arniy on the foutl bank of the river, in the neighbutrhood of Stirling, there to make the lift fland for the national liberty. The Scots fondy imaroned, that Edward would attempt to force the pallage, as the e impetunus Crefliggham had attempted in circumfances not dillimitar. Ibat the pritence of Edvard frulta. ted their expectations. Having difcovered a ford at fome difance, he croffel the river at the head of his whole cavalry. 'The Scots gave way, and difperled themfelves.

All refources but their own crurage had Inng failed them ; that laft re.nurce failed them now, and they liafened to conciliate the favour of the conc|ueror. Previous to this, Bruce had lurrendered himielf to John de St Jchn, the Englifh warden. Comsn and his followers now fubmitted to Edward. They Itipulated for their lives, liberties, and ellates : relerving always to Edward the power of inflicting pocuniary mulats on them as he fhould fee fit.
Frum the general conditions of this capitulation, the following perfons were excepted: Witheart bilhop of Glafgow, the Steward, Sir Juhn Souls, David de Graham, Alcxander de Lindeliay, Simon Frafer, Thomas Bois, and Whallace. Writh ieffert to them, it was provided, that the billhep of Glafgow, the Secward, and Soulis, flould remain in exile for two years, and dhould not pals to the north of Trent; that Gr.ham and Lindefay hould be banifhed from Sonilind for fix months ; that Fiafer and Bois fhould be banifhed fer three years frum all the dominions of Edward, and flould not be permitted, duing that fpace, to repair to the terricories of France. "As for William Wallace, it is agreed, that he thall render himicif up at the will and mercy of our fovereign lord the king, if it fhall feem gool to him." Thefe were all the conditions that the Scotrill mation fipulated for the man who had vanquifhed the Englifl at Stirling, who had expelled them frum Scctand, and who lad once fet his country frce!

Amid this wireck of the rational lilecries, Wallace fcorned fubmiffion. He lived a frec man : a free man he refolved to die. Frafer, who had too oft complied with the times, row caught the fame heroic fintiment But their en leavours to roufe their cnurstry men wise in vain. The feafon of refift nce was patt. Wallace perceived that there remained nor more hepe; and fought out a phace of conce:ilnent, where, clading the vingeance of Edward, he might filently lament cvor his fallen country.
Edward aftembled at St Andrew's what is called a
purlicimen:-
* vila \({ }^{1}\). -sduced, and Sintland fubdrid.
porimaont. Wadlace, Frafer, and the cratrifion of Stirline, were fummonei to appear: They appeared not, and lentence of outlawry was pronounced againft them. Edward now prepared to beliege the cattle of Stirling: and, forefeeing that the reduction of this place wruld be attended with confiderable difficulty, he itrip. ped the abbey of St Andrew's of the lead which covered it, in order to employ the metal in bullets for his battering machines. Oliphani was folemnly fummoned to furrender ; but in vain. Edward drew out all his artillery, and battered the walls with flones of 200 pronds weight. The betieged, however, defended themfilves with obfinacy, and killed a great number of the Englifh: but at lait they were obliged to furrender : and Edward, looking upon the conquelt of Scotland as now complere, fet out for York, and from thence to Lincoln.

Though Edward had thus met with all the fuccefs he could sefite in his expeditions dgainft the Scots, he could, not bur perceive that his dominion over them mult be very precarious, as long as he held them in the fubjeation of a conquered people. He refolved thercfore once more to renew his attempts for an union of the tro kingdoms. He began with taking into favour the bithop of Glafgow, Robert Bruce, and J ha Muwbray, who, next to Bruce and the Cummings, was amongt the greateit of the Scottifh nobility. To them lie recommended the fettling the affairs of their country, but in fuch a manner as to leave it in his power to effeat the propofed union with England. This fcheme, lowever, was by no means agreeable to Bruce; who lad now no other competitor for the crown but Cumming, who was in a great meafure incapable of oppofing his defigns: neither indeed could it ever be made agree.able to the bulk of the nation; and therefore came to nothing at laft. Scotland, however, was fubdued. Its mhabiants had renounced every idea of alferting their liberty, and only frove to make their count to the conqueror. Walace alone remaired an exception. Edward, who had received into favour thofe who had proved traitors over and over again, thowed a mean revenge againft the only man who difcovered a fleady and he- nourable ipirit, and whofe friendthip feemed wor th the courting. Ralph de Haliburten, a priioner, offered tis aflitance for difovering Wallace; and tor this puipofe he was granted a temporary liberty : but what he did in this very difhonourable employment is unknown. Certain it is that Wallace was difcovered, and betrayed into the hands of the Englifh, by Sir John Menteith, as is commonly fuppoied; who is alfo faid to have been rhe intimate friend of Wallace, though without any jult foundation. Be this as it will, however, this celebrated and heroic patriot was arraigned at Wellminfter as a traitor tw Edward, and as having burnt villages, formca caftes, and naughtered many fubjects of Eng'and. Wallace deried his ever having been a tratur, and indeed with truth; for he had always been the avowed enemy of Ellward, and had not at any time owned allegiance to him. But whatever his defences might have been, they were of no avail with a judge who had refolved on his deltruction. Wallace was condemned to die a traitor's death, and the fentence was executed with the utnoft rigur! In his latt moments lie allertcd that independency which a degenerate nation had renouaced. His head was piaced on a pinnacle at Lon-
don, and his mangled limbs were difributed over the
After the death of Wallace, Edwatd thought of nothing but fettling the affairs of Scotland as a conguered country; however, he took care to preferve the ancient for country; however, he took care to preferve the ancient for futhing
forms as far as was confintent with the dependent fate the scots of the mation. It has beenfaid, indeed, that Edward "Fairs. abrogated all the Scottifh laws and cuftoms, and endeavourcd to fubftitute the Englifh in their Itead ; but this is denied by others. Lord Hailes gives us at length the record with reipect to thefe laws, in the following words. "And, with refpeet to the laws and ufages of the government of Scotland, it is ordaineo, that the cufooin of the Scots and the Brets flall for the future be prohibited, and be no longer practifed. It is alfo ordained, that the king's lieutenant fuall forthwith affemble the gond people of Scotland: and that, at fuch affembly, thall be read over the ilatutes made by David king cf Scots, and alfo the additions and amendments which have been made by other kings; and that the lieutenant, with the afiftance which he thall then have, as well of Englifhmen as of Scots, frall amend fuch of thefe ttatutes and ufages as are plainly againft the laws of God and reafon, as they beft may in to fhort a fpace, and in fo far as they can without confulting the king; and as to matters which they cannot undertake to corres? of themfelves, that they be put in writing, and laid before the king by the lieutenant, and any number of commiflioners, with parliamentary powers, whom the Scots thall think fit to choofe. That they fhall meet with commifioners appointed by the king, and finaliy determine as to the premifles."

This is the record by which it is generally fuppofed that the law of Scotland was abrogated. But Lord Hailes is of opinion, that the ufage of the Scots and Brets Did rot here mentioned was fomething different from the com- abrogate mon law of the land. "We know (iays he) from our the aacien: flatute book, that the people of Galloway had certain ufages peculiar to thenuleives; Stut. Alex. II. c. 2. One was, that canles were tried among them without juries [2tor. Attach. c. 72. 73. placed in forme ancient MSS. among LL. David I. c. 15.], and this may probably have been the ufage which Edward abolithed. The people of Galloway were fumetimes diftinguithed by the name of Soots : thus the wild Scot of Gallorvay is an expreflion to be found in ancient inllruments, and is proverbial even in our own days. The ufage of the Brets, I take to be what relates to the judge called britbilh, or breion; in Ireland, Greban; and confequently, that the thing here abolifhed was the commutation of punifinemts by exacting a pecuniary mule."

An indemnity was now granted to the Scots upon Indemnity certain conditions. Various fines were impofed, from granted to one to five years rent of the eltates of the delinquents, the Soots. One year's rent was to be paid by the clergy, cxcluding the bilhop of Glafgow; two by thofe who were more early in their fubmifions than Comyn; three by Comyn and his alfociates, and by the bithop of Glagoow ; fuur jears rent was to be paid by William de Baliol and \(J\) hn Wifheart ; and five by Ingelram de Umiraville, becaufe they had food nut lonser. Thee years rent was alfo paid by the valfals of Baliol, Wifheart, and Umfraville. Thefe fines were to be paid in moieties, The jerton taxed was to pay half his income annally: and thus Unfraville, taxed in five years rent, was al-
scoeland. lowed ten jears to difcharge the fine. This was an exprefs refervation to Edward of all the royal demefnes which Jaliol might have alienated. There was alfo an exception for thofe who were already in cuftody, and thote who had not yei fiumitted.
127 overthrow land wholly reduced under the don:inion of Edwart. othe Eng- - WVithin foar merohs that fyltem was overthrown, 1:11 goverr:ment.
which the incellant hobour of fiftecn yeurs had ellablithca by craft, difimulation, and violence, with a walte of treafure, and the effufion of nuch blood. The caules of this cvent are related as follows. Derverguill of Gatloway had a fon, John 13alich, and a diaghter mamed Mírjory. John Comya was the fon of Marjory, and, fetting Baliol alide, was heir to the pretenfioas of Derverguill. He liad for many ycars maintained the conteft againft Edward : but at lan laid down his arms, and fivore fealty to the conqueror ; and as Batiol had repatedly renounced ail pretenfions to the crown of Scotland, Comyn might now be confidered as the rightful hicir. His rival in power and pretentions was Bruce earl of Carrick. This young nebleman's grandfather, the c:mpp-tilor, had patiently acquiefced in the award of Edward. His father, yielding to the times, had ferved under the Englifh b.annets. But young Bruce had more ambition, and a more reflefs fipirit. In his carlier years he acted upon no regular plan. Dy turns the partifan of Edward and the vicegerent of Baliol, he ieems to lave forgetten or fifed lis pretenfions to the crown. But his charater developed i:felf by degrees, and in maturer age became firm and confitent. According to the traditionary report, Bruce made the following propolal to Comyn : "Support my title to the crown and I will give you my eltate; or give me your eftate, and I will fupport your's." The conditions were properly drawn out and figned by both parties; but Comyn, cither through fear or treachery, revealed the whole to Edward. On this the king flowed Bruce the letters of his accufer, and queftioned him very hard; but the latter found means to pacify him by mild and judicious anfivers. Notwithft.nding this, however, Ed. ward hill furpected him, though the dififembled his fentiments, until he thould get the brothers of Bruce into his poiver, and then deffroy all the family at once. The king having drank freely one evening, informed fome of his lords that he had refolved to put Bruce to death next day. The earl of Gloucellicr, hearing this refolution, fent a melfienger to isuce, with twelve pouce and a pair of lipurs, as if lic had neant to reftore what he had borrowed. Bruce undertinod the meaning of his mefliage, and prepared for fight. The ground was covered with faor, which would have difco vered his fight; uiut; :- is faid, that liruce ordered his farrier to invert the thoes of his horfis, and immediasely fet out for Scotland in company with his fecretary and groom. In his way he obierved a foot-pallinger whofe b-haviour feemed to be fuipicious, and whom he fonn difcoverad to be the bearer of letters from Comyn to the Englifh minnarch, urging the death or immediate imprifonment of Bruce. The haticr, filled with refentment, immediately becheaded the meffienger, and fet forward to his c.nfle of Lochmaben, whe:e he arived the feventh day after his depurture frem London. Soon after th:s h:e repaired to Dumfries, where Comyn happencd : that time to refide. Brace :equefted an inse:v:sw with him Vol. XYI.
in the convent of the Minorites, where he reproached him with his treachery. Comun gave him the hie, and \(\underbrace{-1}\) Bruce inftanty flabbed him; wfer which he hatened nut of the convent, and called "T"n horfe." His at- And kill, tendants, Lindiay and lirkpatrick, perceiving him John Eapale, and in extreme agitation, inquired how it was witl myo. him? \& III (replied Bruce); 1 duubt I huve Ilain Comyu." " You doubt!" cricd Kirkpatrick; on faying which, le ruthed into the place where Comyalay, and infantiy difpatched him. Sir Robert Cumyn, a rciation, attempted to defend his kinfman, and thared his fate. Bruce had now gone fo fer, that it was in vain to think of retracting ; and thetefore fet himfelf in rppofition to Fdward in good carnef. The juftici ries were than holding their court at Dumfries; who hearing what had happened, imagined their own lives to be in dan. ger, and barricaded the docrs. Bruce ordered the liourto be fet onfire: upon wilich they fursendered; and Eruce grayted them leave to depart ou: of Sco:land without moleflation.

The above account of this catiftrophe is taken from 0 , inion of the Scots hiftorians; thofe of England differ in mony loodH icis particulars. Lord Hailes fuppofes both to be wrong enaeconin and that the true circumftances of the quarsel ate \(1: n\). Inown. "IIy opinion (fays he) is, that Bruce, wlecr: lie met Comyn at Dumfries, had no intention of embruing his hands in his blood, nor any immediate purpofe of afterting his right to the crown of Scotland; What the flatighter of Comyn was occaforied by a hatty quarrel between two proud-fpirited :iva!s; and that Bruce, from necelity and depair, did then alfer: his pretentims to the crown."

The death of Comyn atrected the Scots varioully, according to their different views and intcrells. The relations of the deceafed viewed it as a cruel affalination, and joined with Ledward in fchemes of revenge. Some who wilhed well to the peace of their country, thought that it was better to libbmit quietly to the government of the Englifh, thatn to attempt a repolution, which could not be eficeted withont much danger and bloodthed: but, on the other hand, the friends of l3ruce now f.u the necelity they were under of proceeding to the cornastion of the new bing without lofs of time. The Robers ceremony was thetefore perfurmed at Scone on the \(=5\) h crowned of IrIareh 1306 , in preferse of two earls, the bifhops of king of St Andrew's and Glaignw, the abbot of Scone, John Scoilandly de Athol, and Johin de Menscith. It had been cuibo. mary, fince the days of Macbeth, for ore of the farmily of loine to put the crown o:1 the king's liead; and Bruce found tise prepolelition of the Scots it favoure of this citcumbtance io throng, that he was obliged to recis for an expedient to Sisisfy them. MaEduff the casl of Fif: was at tha: time in England, where he had mar. ried a near relation of Edward. His fifter was wite is the eatl of Bechan, cue of the heads of the family of Comyn, and condquently the ditermined enemy of Robert. Ly an uncommon citori of female patriotifm, the poll poned all private quarrels in the good of her country, and in her huband"s abfence repaired, with all his Warlike acenta:ements, to Bruce, to whom the delivered them up, and placel tle cromn upon his hedd. This crown is fivd to hiwe been made bi one Conyers an Englifman, who na:rowly c.carcubcing punilhed for it by Edwa:d.

The king of Enginad received inocid gence of all thele 5 C rro.

Proceedings with athonifhmont; and without delay font :a body of troops under the command of Aymer de Vialance eat of Pembroke, to fupprefs the rebellion. Bruce emitted nothing for his defence. He hat always been co:ficeredby his countrymen as a promilingaccomplithci young nobleman, but firmly attached to Edward's peron and government ; for which reafon he trad not ten trusted by thole independent patriots who joined Wallace. But their confidence was now gained by his rendering himelf fo obnoxious to Edward, that no poo-

Actives.
fibility of a reconciliation was left; and he foo fat himself at this head of a fall army. With there, who confined of raw and unexperienced folders, bruce form. ed a camp at Metheen near Perth, which Bat was the head-quaters of the enemy; but knowing the deadvantage under which he laboured frons the inexperience of his men, he refulved to act upon the defenfive. The IEnglifl general at half font Bruce a challenge to fight him, which was accepted; but the day before the battle was to have been fought by agreement, the Scots were attacked by furprife, and totally defeated. Bruce belaved with the greatelt valour, and had three horfes killed under him. Being known by the flughter which he made, John Mowbray, a man of great courage and refolution, ruffed upon him, and catching hold of his here's bridle, cried out, "I have hold of the newmade king!" but he vas delivered by Chriftopher Seaton. Sone Scottifh hiforians have afferted that on this occafion all the prifoners of note were put to death; but others inform us, that though Edward did fend ordoers to that purpofe, the Englifh general pardoned all thole who were willing to fear fealty to his matter: however, it is certain, that after the battle of Methven, many prisoners were hanged and quartered.
This difalter almolt gave the finilling ftroke to the affairs of Bruce. He now found himself deferted by a great part of his army. The Englith had taken prifoners great numbers of women whole hut bands followed Bruce ; and all thofe were now ordered, on pain of death, to accompany their husbands. Thus was Bruce burdened with a number of ufelefs mouths, and found it hard to fubfitt. The confequence was, that moll of his men departed with their families, fo that in a few days his army dwindled down to 500 . With there he retreated to Aberdeen, where he was met by his brother Sir Neil, his wife, and a number of other ladies, all of whom offered to follow his fortune through every diffcults. But, however heroic this behaviour might be, it put Bruce to forme inconvenience, as he could farce procure fubliftence; and therefore he perfuaded the ladies to retire to his cafte of Kildrommey, under the protection of Sir Neil Bruce and the Earl of Athol. In the mean time the defertion among Bruce's troops continued, fo that now he had with him no more than 200 men; and as winter was coming on, he refolved to go into Argylethire, where Sir Neil Campbell's efface lay, who had gone before to prepare for his reception. In his way thither le encountered incredible difficulties; and rome of his followers being cut off at a place called Dally, the reft were fo difheartencd, that they all forfook him, excepting Sir Gilbert LIly, Sir James (formetimes called Lord) Douglas, and a few domellics.
crolled Lnchlomond in a fall crazy boat, he was diffcovered by his truly friend the Earl of Lemon, who had been proferibed in England, and now lived in a Lind of exile on his win eftate. The meeting between the te friends was vary affecting, and drew tears from the eyes of all prifent. Lenox, who had heard nothing of linuce's misfortunes, furnithed him and his half -famined attendants wihplerty of provifions : but being fou made fenfible that it was imponible for them to live in a place where they were well known, and furrounded by enemies, Bruce refolved in feet out fume more fate habitation. For this purpose Sir Neil Campbell lad already provided thipping ; but our adventurevs bad fearccly let fail, when they were purfued by a large fquadron of the enemy's feet. The bark which carried the earl of Lenox efcaped with the utmoft dirficulty to Cantire, where Bruce was already landed: and, at their meeting, both agreed that their perfons fhould never afterwards be feparated while they remain ed alive.

In the mean time Edward having compromised forme differences with his Englith fubjects, refumed his old project of entirely lubduing Scotland; and his interton now appears to have been to divide the lands of fuck as he furpected of diliffection among his Englifh followers line ordered a proclamation to be made, that all who had any title to the honour of knighthood, cithen by heritage or eftate, Could repair to Weftminitter to receive all military ornaments, their horfes excepted, from his royal wardrobe. As the prince of Wales came
under this denomination, he was the firft who underwent the ceremony; which gave him a right to confer the like honour on the fons of above 300 of the chief nobility and gentry of England. The prince then repared at the head of this gallant train, to Edward; who received them, furrounded by his nobility, in the moot iolemn manner. The king then made a fpeech on the treachery of the Scots, whole entire deftruction he vowed. He declared his refolution of once more heading his army in perron; and he defined, in cafe of his death, that his body might be carried to Scotland, and not buried till tignal vengeance was taken on the perfidious nation. Having then ordered all prefent to join him within fifteen days, with their attendants and military equipages, he prepared for his journey into Scotland. He entered the country food after Bruce's defeat at Methven. The army was divided into two bodies; one commanded by the king himfelf, the other by the prince of Thales, and, under him, by the earls of Lancafter and Hereford, with orders to proceed northwards, and penetrate into the countries where the intereft of Bruce was ftrongeft. As he puffed along, Edward caused all that fell into his hands, whom he fulpested of favouring Bruce's party, to be immediately. executed. The Bilhop of Glatgow was the only excepion to this barbarity; he was taken, but had his life fared on account of his function.

In the mean time, as the prince of Wales continued his march northwards, Bruce's queen began to be alarmed for her own fafety. She was advifed to t. ike franctuary at the florine of St Duthac in Rofsthire; but there the was made prifoner by William carl of Ross, who was of the Enylifh pirty. By Edward's order fie was fent to London; her daughter, who was taken at the fame time, being tout up in a religious house. The

142 Adventure
of Ruber:

Scotland. directions for the entertainment of the quesn are Aill
preferved \(\ddagger\). She was th be conveyed to the manor of Brufewick ; to have a waiting woman and a maid.fervant, alvanced in life, fedate, and of good converiation: a butler, two mei.-fervants and a fout. boy fon her ch...mber, fober, nut rivtous, to make her bed : thates greyhounds when the inclines to burst; verifun, fill, and thic faireft hutfe in the mator. In \(150^{\circ}\), the was remered to another primen; in 1312, the was remaval in thind. for catte, 20 fhillings per weel: being allowed ther her mainteranice. In 1314 , fhe was cominitted to Ruociefter cafte, and was mot fet at liberty till the clufe of that ycar.
The only forters which Fruce pofferied in Scotiand was the callle of Lilldronmey; and it was foom befieged by the earls of Lancafter and Hereford. One Oiburn treacherouffy burat the magazine ; by which means the garriion, deltitute of provilions, was obiged to tirrender at difcreti a. The common foldiers were langed; Sir, Neil Lruce and thic earl of Athol ware fent pritioners to Edward, who caufed hem to be hanjed on a gallows 50 feet high, and ther beheaded and burnt. The countefg of Buchan, who had coovied King Robert, was taken prifoncr ; as was Lady Mary Bruce, the king's fifter. Some hiiforians ldy, that Edward ordered thefe two l.sies to be that up in wooden cages, one to be hung over the walls of the cathe of Rexburgh, and the oflher over thofe of Berwick as fublic fpectacles: but Lord Hailes only tells us that the counters of Buchan was put into ciofe confinemont in the cafle of Berwick ( F ).
About this time alfo many others of Bruce's party
were put is death; among whon were 'larma and Alexaader bruce, two of ther liners brothers, and J hn Watace, bicilur to the celebrated Sir William. Fuce hinglelf, is the mean time, was in fich a dafie c able fituation, that it w:ts thought he nevar could give wore dillurbance; and it was even reportad that he was dald. All his mi-furtunes, lowerer, could nt in in imidate lam, or prevent lis meditating a mof fercee resens: lipon the dellerogers of his family. He firit renaned to the cafle of Dumbarton, whele he was hofpitably riesived snal catert ires by Angus Inrd a
 l:e failed in th.ree days to Rachrim, a linall illado on the lith coall, where te fecured himfelf effectually from the purfuit of has chencie. It was duting his they ia this illand, thett the repert of his death was generally pripagatis. Notwithat maling this, his party incriafed cortiderally ; and, even when he landed on this ifland, he was attendej by 300 men. However, atter havins lived for fime time in this retreat, being apprehenfive that the report of his death might be generally eredited among his friends in Scotiand, it was refolved to attempt the furprife of a fort held by the Eaglith under Sir John Hattings, on the ille of Arran. 'This was performed with fuecel's by his two friends Douglits and Sir Robert Boyd, who pu: the greatelt palt of the garrifon to the fword. The king, hearing of thcir iuceefs, palied over into Arran; but, not knowing, where his people refiled, is faid to have found them out by blowing a horb. He then fent a trufty fervant, one Cuthbert, into lis own country of Carrick; with orders, in cafe he found it we?l a afened 5 C 2
(f) M. Weftminfor, p. 455 . fays, "Capitur etiam ẹt illa impiillima conjur.trix de Buchan, de qua confultus rex, ait, Quia ghadio non percufli, gladio non perioit ; verum, propter illicitam conjurationem quam iecit, in domicilio lapideo et ferreo, in modum coronx tab-icato, firmifime ob?ruatur, et apud Bervicum fub dio forinfecus fufpendarur, ut lit \(\mathrm{d} t \mathrm{a}\), in vita et poll mortem, fpeculum viatoribus, et opprobrum fempiternum." Other Englith hiftria 2s, copying MI. Wefminter, have faid the fime thing. We cannot, therefore, blame Abererombic for faying, "She was put in a wooden cage llaped like a crown, and in that tormenting polture hung out from high walls or turrets to be gazed upon and reproathed by the meanef of the multitude :" Vol. I. 1. 5\%9. Hemingford, Vol. I. p. 221. relates the Atery in a manner fomewhat different. IIe fays, that the earl of Bucianh her hufond fought to hill her fortreaton; wut that Edwa:d re!lamed him, and ordered her to be cenfincui in a vooslen caze.

T".e intentions of Edward I. touching the clurance of the cunters of Buchan, will be mere certainly learnad from is own orders, than from the report of M. Wefminfler. His orders run thus: "By letecrs under the prive- eal, be it comnanded, that the chamberlaia of Scotlind, or his deputy at Burwick upou Tweed, do, in
 ftrongly latticed with wood (d-fuifl, i. e. beams of timier or palifides), crols-barsed, and fecurcd with iron, i: which he fhall put the countefs of Buchant. And hat lie tatie come th at the he fo weil and frely guardad there, in, that in no fort fhe may :Tue theretrom. And that be appoint one or more women of Berwick, of Eagiti

 that the nay not fpesk with any one, nan or woman, of tha Sootith nation, or with any one che, favins with the women who thall be appointed to atend her, or with the guard who fhall have the cutody of her foreas
 de chambre comrioife) ; noterthelefs, that all things be fo well and fircty (rdered, tiat nu peril arife touch ins the right cufosy ot the faid countefs. And that he to whom the charge of her is coanaited thall be refponible, body for body ; and that he be allowed his charges." Falera, T.ii. p. 1014.

Such were the orders of Edward I. and ha lircly was not:a man who would finf.r hi: orders to b: citubered. Here, irdeed, there is a detail concerning the cutody of a fanal: prifoncr, which may io \(m\) ridizul wily no ruse, hat which is ivoonflemt with the fury related ly M. Wellminter and otiect hiturim. "I thate wh have ne
 date intelligible.

! C arr.ik. at on the ofenfive. Ifis firlt exploit was to furpife his own caftle of ' funberty, which hat been given, along with Bruce's eftate, to lord linry l'eıcy. Him he drove out, along with the Encrlith garriton; but, in the ne:u time, he met with his fervant Cuthbert, whs gave lim difareeable intelligence. This man lat? met with very little encouragement on his landing in Scotland; in confequence of which he had not lighted the fire agrecd upon as a lignal of his fuccels, that whids Brace lad obderved having been lindled by accident. Te alfo told him, that the Englith were in full polfotion of the country; and advifed his matler to be apon his guard. Soon alter this the king was joined by a lady of frotune, who brought along with her +0 warviors. By lier he was firft particulanly intorme! of the miferable date of his family and relations; which, inftead of difleartening, aninmated him the more with a delire of revenge. However, he did not immediately attempt any thing himfelf, but allowed Douglas to attempt the recovery of his effate of Donglas-dale, as Bruce himfelf had recovered his in Carrick. In this expedition Douglas was joined by one "Thomas Dickion, a man of contiderable fortunc, and who gave him intelligence concerning the fate of the commtry. By lis advice he kept himfelf privatc till Palm Sunday; when he and his followers with covered armour \(1 e\) paired to St Bridt's church, where the Englifh were performing divine fervice. The latter were furpifed, but madic a brave defence; though, being overpowered 1.) numbers, they were at laft obliged to yield. Donglas, without farther refiftance, took pofilion of his uwn calic, which he found well fumifhed with aums, provifions, and money. He deftreyed all that he could not carry with him, and alfo the catlle itfelf, where he knew that he mult have been belieged if he had kept it.

While Bruce and his friends were thus fignalizing themfives, and fruggling with the Englifh under fo enany difadvantages, it is natural to think that they muft have met with many dangerous and difficult adventures. Many of thefe, indeed, are relatcd by the Scots hiforians; but molt of them lave the appearance of fables, and it is now imponible to diftinguith the true from the falle ; for which reafon we flatl pafs them all over in flence, confining ourfelves only to thofe fiets which are at once important and well authenticated.

In 1307, the earl of Pembroke advanced into the ":elt of Scotland to encounter Bruce. 'The latter did

J4

\section*{The Lng-} lun tw:ce defeated ly kubert. anet decline the combat ; and Pembroke was defeated. 1 rree days after this, Bruce clefeated with great naughter arother Englith general named Ralph de Monthermer, and obliged him to fly to the caftle of Air. The king laid fiege to the caltle for fome time, but retireci at the approach of linccours from England. 'Ihis year the Englifh performed nothing, cxcept burning the monafery at Pailley. Edward, however, refolved thill to cxecute his utmoft vengeance on the Scots, though he had long been searded in his operations by a tedious and dangerous indifpotition. But now, fup.
pofing that his malady was decreafed fo fire that he scot'ant could fifely proceed on his march, he effered up the sar -horle-liter, in which he had hithento been carried, in the cathedral chureh of Carline; and, mounting himjelf on horfehack, proceeded on the way towarids Solway. He was fo weak, however, that he could advance no farther than fix miles in four days; after which he expired in fight of Scotland, which he had fo ofen devoted to deftiusion. With his dying breath 159 lie frave crders that his body foould accompany lis Deathe of army into Scotland, and remain unburied butil the country was totally fabdued; but his fon difregarding this order, caufed it to be depofited in Weftmi:lfler abbey.

The death of fueh an irveterate enemy to the Scottifh mome, could not fail of raifing the fpirits of Bruce and his party ; and the inactive and timid behaviour of his fon Edward II. contributed not a little to give them fieth courage. After having granted the graat dianfhip of Scotlan: to his favourite liens de Gavelton earl of Pembroke, whom his father had lately binilhed, he advanced to Cumnock, on the frontiers of Airfire, and then retreated into England; conferring the office of guardian of Scotland upon John de Bietigne earl of Richmond, a fortnight after be had beltowed it on Gavellon. He was no fooner gone than Bruce invaded Galloway. The inhabitants refufing to follow his ris \(\$\) ftandard, he laid wafte the country; but was defeated, feated in and obliged to retire northwards by the guardian. In Galloway. the north he over-ran the country without oppofition; and foon began to move fouthwards again in order to repair his late difgrace. He was encountered by Co= nyn earl of Buchan with an undifciplined body of Englifh, whom he entirely defeated and difporfed. But about this time he was feized with a gricvous diftemper, which weakened him fo much, that no hopes were left of his recovery. In this enieebled fituation, he was attacked by the carl of Buchan and John Mowbray an He deteats Englith commander, who had affembled a body of the F.nglifh troops in order to efface their late difhonour. The in his turn, armies met at Inverury in Aberdeenfhire. Bruce was too weak to fupport himielf, and theretore was held upon horfeback by two attendants: but he had the pleafure of feeing his enemies totally defeated, and purfined with great laughter for many miles ; and it is reported that the agitation of his Spirits on that day provel the means of curing him of his difeafe. This battle was fought on the 22 d of May 1308.
The king of Scotlind now took revenge of his enemies, after the manner of that barbarous age, by waAting the country of Buchan with fire and fword. I lis fuccefles had fo rated his charader, that many of the Scots who had hitherto adhered to the Englifh caufe, now came over to that of Robert. Edward, thic king's brother invaded Galloway, and defeated the inhabitants of that country. John de St John, an Englifh commander, with 1500 horfemen, attempted to furprife himes, Ed fadward him; but Edward having received timely information bruce. of his defygns, ordered the infantry and meaner part of his arny to eatrench themelves Ptrongly, while he himfelf, with no more than 50 horfemen, well arnacd, under cover of a thick mift, attacked his enemies, and put them to tlight. After this he rechuced all the forticfies in the commery, and totally cexpelled the E:gglifh from it. About this time alfo, Douglas, when roving about the mountainous and recovers froma dangerous difeafe.

suaccifs. fectled and flactuating in their counfels, that their party knew not low to ate. Edward flill imagined that the:e was a pollibility of reconciling the Scots to his government : and for this purporic he employed William de Lambyrion, bithop of St Andrew's, who, aficr having been taken prifoner, and carried from one place of corifinement to another, had at laft made fuech fubmif. fions, as procured firt his liberty, and then the corfidence of Edward. This ecclefiafic having taken a moit fulemn oith of fi:c'ity in Edward, now refolved to ingratinte himecil, by publifling again Ruber: and his atherents a deatence of excommunication, which had been refotved on long before. This, however, produced no effect ; and the event was, that in 1309 , through the mediation of the king of France, Fidward confented to a trace with the Scots. This pacilic difpofition, however, lafted not long. The truce was fiarcely concluded, when Edward clarged the Scots with violating it, and fummoned his barons to meet him in arms at Ncwcinle ; yet, probatly being doubtfull of the event of the war, he empowered Rubert de Umifraville, and three others, to conclude a new truce; declating, however, that he did this at the requef of Prilif ling of France, as his dearen f:uher and friend, but who was in no fort to be confidered as the ally of Scotland.
The rew nefociations were foon interrupted. Thacy were ag.in renewed; and in the beginning of the year 1310 the truce was concluded, but extircly difregarded by the Scots. The progrefs of Bruce now became very alarming. Thee town of Perth, a place at that time of great importance, was threatened; and to re. lieve it, Edward irdered :a fleet to fril up the river Tay : he alfo comm.nded the earl of Uller to afremble a body of tronps at Dublin, and from thence to invad: Scotland; his own burons were ordered to mect him in arms at Berwick. About the cad of September, he entered Sertiand; puffed from Roxburgh, through the foref of Selkirk, to Biggar : from thence he penctrated into Renfiew; and turning back by the way of

The épirit of enterpric had now communicated \(i\) i- Linlais (mo felf to all tanks of people in Scctland. In 1311 , the wis \(1.8=\) cathle of Linlithgow was furprifed by a pour peatant prif d by named IV'ilium Binmat. The Englifh ganmifun we:c fecure, and kept but a flight grard; if which Ennock being informed, concealed eight refolute men in a load of his, which he hai been employed to u'vive into the canle. With thefe, is foon as the gate wer; opened, he fe!l upon the fechle gitard, and becarre ma icr of the place : which was difmantled by Robert, as well as all the ether caltles taken in the cunrle of the was.

Edvard now refolved to invade Scotiand again; and for this purpofe ordered his army to affemble at kaxburgh. Dut Robert, net contented with defending Robert in:his nwn country, refolved in his iurn to invade Lines- vades England. He accordingly entered that country, and crucl. land, and ly ravaged the bifhopric of Durham. He returned takes I'cr:? loaded with 〔poil, and had fiege to Perth. Nfeer re turu. maining lix weeks before that place, he r.tifed the ficre, but returned in a few days; and having provide.l f.dling ladders, approached the works with a chofen budy of infan: 5 . In a dark night he mule the attack: and having waded through the ditch though the wates foned to his throat, he was the fecond man wlo reacled the tup of the walls. The tuwn was then foon takien; atter which it was plundered and burnt, and the furtincations levelled with the ground. This happenel on the Sth of J.menary 1312.

Edward was now become averfe to the war, and ir. newed his negociations for:a truce; but they lill catia Ifh to noching. Robest asain invaded Emyland; buas: Invate
great part of the city of Durlam; and even threater..d Lnghat to beliege Bernick, where the king of Linglual ind, for the cime, fixed his refidence. He next reluced the caftics of Butel, Dumfries, and Dallisin un, witl many other furtrefles. 'I'he cattle of Rosburgh, a jhate of the utmoit importance, next fell into his hands. 'Il.e walls were fealed white the garrifon was revelling cos the eve of lent. "lhey retreated into the inner twer; but their rovernor, a Frenchman, having icceived at mortal wound, they capitulated. R.andolph, the king's nophew, who haj been imprifoned, as we have already obfersed, was wow rea i. ved into livour, and began to diflinguith hinfelt in the canfe of his country: He blockaded the casice ct Th the cante of his country: Fe blockaded the cantec (ith Lata neighbouring country was cu: off. The place was ise \({ }^{1 / 1 / 2-}\) commanded by one Leland, a kni phe ni Gafcony; but Reach the garrifon lupefing his fidetity, imprifoned lim i,s a dunteon, and chofe another commander in his ttead. One William Frank pretented hishlif to Randoifin, and informed him how the walls migh: be fented. Tlies man in bis youth hotd refided in the caltere and has is:

\(\qquad\)
 O2: at: intrigue with a woman in the neighbounhood, had heen accultomed to defeend the wall, during the night, by means of a ladder of ropes; whence, by a theep and dificult path, he arrived at the foot of the rock. Randalph hinifelf, with 30 men , undertook to fale the caltle walls at midnight. Frank was their guide, who 111] :ctained a perfect memory of the path, and who Intl atiended the wall. But before the whole party could reach the fummit, an alarm was giver, the garriion ran to arms, and a defperate combat cufued. The Englith fought valiantly till their commander was kilied; alter which they threw down their arms. Leland, the tormer governor, was releafed from his confinement, and entered into the Sectifh fervicc.

In \(1 \hat{S}_{13}\), king Robert found the number of his friends increafing with his fuccefles. He was now joined by the earl of Athol, who had lately obtained a grant of lands from Edward. This year, through the media-
tion of France, the conferences for a truce were renewed. Thefe, however, did not retard the military operations of the Scots. Cumberland was invaded and laid watte : the miferable inhabitants befought Edward's proteation; who commended their fidelity, and defired them to defend themfelves. In the mean time, Robert, leaving Cumberland, pafied over into the ifle of Alan, which he totally reduced. Edward found great difficulties in raifing the fupplies neceffary for carrying on the war; but at laft overcame all thefe, and, by the beginning of the year 1314 , was prepared to invade Scotland with a mighty army. In March he ordered his thips to be affembled for the invalion ; invited to his affitance Eth O'Connor, chief of the Irifl of Connaught, and 26 other Irifh chiefs; fummoned them and his fubjeats in Ireland to attend his Pandard, and gave the command of thefe auxiliaries to the earl of Uifter. His barons were fummoned to meet himat Berwick on the 1 th of June; and 22,000 foot-foldiers, from the different counties of England and Wales, were required by proclamation to affemble at Wark.

In the mean time, the fucceffes of the Scots continued. Edward Bruce had reduced the caitles of Rutherglen and Dundee, and laid fiege to the cafle of Stirling. The governo: of the place agreed to furrender, if he was not relieved before the 2 qth \(^{\text {th }}\) of June 1314 ; and to this Edward agrece, without confulting his beother. The king was highly difpleafed with this rafh treat \(\%\), which interrupted his own operations, allowed the Englifh time to affemble their utmoft farce, and at laft obliged him either to taife the hege or to pu: all on the event of a tingle battle. However, he refolved to abide by the agreement, and to meet the Englin by the appointed day. Having appointed a lingson general rendervous of his forces between Falkirk and
iacduifive Stirling, he found their number to amount to fome-nagascmentus Banno:kiurib.
what more than 30,000 , befides upwards of 15,000 of an undiciplined rable that followed the camp. He deternined to wait the Englifh in a field which had the binok or lurn of Dannock on the right, and Stirling on the lift. His chisef dread was the frength and namber of the Englifn civalry, and the fe he took every method to oppoife. The bunis of the brook were feep in miny places, ard the ground between it and Stiling was partly covered with wood. The king commanded many pits, of about a foot in breadth and two or three feet dees, to be dug in all places where ca-
valry could have accefs. From the defcription given of them by the hiforians of thofe times, there feem to have been many rows of them, wigh narrow intervals. They were carefnlly covered with brufhwood and fod, fo that they would eatily be overiooked by a rath and impetuous enemy. It is faid by fome authors, that he alfo made ufe of caltrops, to annoy the horfes in the molt effictual manner.

On the 23 d of June, the Scots received intelligence Difpofition \({ }^{16 \mathrm{r}}\) of the approach of Edward, ard prepared to decide of the the fate of their country: The front of their army ex. Scots, tended from the brook called Lianrockuip, to the neighbourhood of St Ninians, pretty nearly upon the line of the prefent turnpike-road from Stirling to Kilfyth; and the tone in which the king is faid to have fixed his ftandard is Aill to be feen. Robert commanded all his foldiers to fight on foot. He gave the command of the centre to Douglas, and Walter the young Reward of Scotland ; his brother Edward had the command of the right wing, and Randolph of the left; the king himfelf taking charge of the referve, which confited of the men of Argyle, Carrick, and the iflanders. In a valley to the rear, faid to be to the weftward of a rifing ground now called Gilles-bill, he piaced the baggage, and all the urelefs attendants on his army.

Raindolph was comnanded to be vigilant in preventing the Englifh from throwing fuccours into the cafte of Stirling; but Soo horfenien, commanded by Sir Robert Clifford, made a circuit by the low grounds to the ealt, and approached the cattle. The king, perceiving their motions, chid Randolph for his inadvertency, on which the later haftened to eneounter that body. As he advanced, the E.glifh wheeled to attack him. Randolph drew up his men in a circular form, holding out their fpears on every fide. At the firtt onfet Sir William Daynccourt, an Englifh commander of dittinguithed valour, was killed; but Randolph, who had only a fmall party with hinn, was furrounded on all fides, and in the utmoft danger. Douglas perceived his danger, and requefted the king to let him go to his alfiltance. Robert at firft refufed, but afterwards confented with reluftance. Douglas fet out without delay; but as he approached he faw the Englifl falling into diforder, upon which he called to his men to fop, and not diminifl the glory of Randolph and his men by tharing their victory.

Robert was in the front of the line when the van- \(\mathrm{An}{ }_{\mathrm{Eng}}^{\mathrm{En}}\) guard of the Englith appeared. He was meanly dref- lifh knight fed, with a crown above his helmet, and a battle-as in his hand. Henry de Bohun, an Englifh knight, armèd cap-a pee, rode forward to encounter him. Robert did not decline the combat, and fruck his antagonift fo violently with his battle-ax, that he is faid to have cleft him down to the chin; after which the Englih vanguard retreated in confution. The Scottifh generals are faid to have blamod their king for his ralmefs in thus encountering Bohun; and he himfelf, confcious of the juftice of their charge, only replied, "I have broke my good battle-ax."

On Monday the z4th of June, the whole Englifh army moved on to the attack. The van, confilting of archers and lancemen, was commanded by Gilbert de Clare carl of Gloncefler, nephew to the Englifa king, and Humphry de Dohun contabie of England ; but the ground was fo narrew, that the ref of the amy had not

Sootland. fufficient room to expand itrelf; fo that it arpeared to the Scots as confifting of one great cempand body. The main body w.as brouglit up by Edward in perion, 3:tundeu by Aymer de Valence ear! of Pumbrose, atd Sir Giles d'Argentine, two experienced comnanice:s. Maturice abbot of Inclaffray, plicing limielfon an emirence, celebrated mafs in the lighe of the Scu:tihh arriy. Iie chen pallid alo:ng the tront, burelorted, with a critcitis: in his hands, and in few wo.ds exthoted the Secis t) fight for their rights and iiberty. The Scots fell down on thair lines; whi h being perceived by Edward, he cried out, "They yield! See, they implore mercy." "They do," a fiered Unffaville, one of his commanders, "they do implore merey, bet mot from us. On that field they will be vidiorious or die."
If 5
The Eng- As both parties were vislently exafperated againit lifh cutirely each other, the engagement began with great fury. defeted. The king of Scotland, perceiving that his troops were grievoutly anoyed by the Englifh archers, orderad Sir Robert keith the matifchal, with a few ammed l:orfenen, to rake a circui: and attack the archers in flank. This was inltantly accomplithed; and as the weapons of the archers were ulelefs in a clofe encounter, they could make very little refiltance, at the fame time that their flight fpread difo:der through the whole army.
Robert now advancul with the referve: the whole Englift army was in the utmoft contufion; for the dzfeat of the archers had decided the viftory in favour of the Scots. The young and gallant carl of Gloucetter attempted to rally the fugitive,, but was thruwn from his horfe, and cut in picces, which increafed the general coulufion. At this critical moment, the numerons attendants on the Sec : in camp, prompted by carionity or the defire of pluasicr, fithed from their retirement. The Englith miftook then for a body of freth truops coming to the affinance of their enemies, and fled with precipitation on all lides. Many fought relinge among the rocks in the nei hburhood of Stilling caff!e, and many were dromned in the rivers. Pubroke and Sir Giles d'Argentine had never quitted EJward during the attion; but now, feeing the bat tle irretricvably loft, Pembroke conttrainad the king to quit the licld. D'Argentine refufed to fy. Hc was a man of great valour, and had a high repuation in Scotiand. According to the vulgar opirion, the three moll eminent worthies in that age were the emperor Henry of Luxemburg, Robert Brace, and Gales d'Argentine. If is faid to have thrice encountered two Siracen warriors in Paleftine, and to have killed tiacm both each time. His valour now availed him but lithe; for ralhing into the midt of the Scots army, he was imfantiy cut in piece. Douglas, with 60 horfemen, purfued Fidward clofe. At the Torwood he met Sir Laurence Abernethy, who was hattening to the Englith rendezwous with twenty horfemen. The latte: foon abandoned the caufe of the vanquifled, and joined Douglas in the purfuit of Edvard, who tled to Linlithges. He had farccly arrived there, when he was alurnied by the approach of the Scots, and again obliged to Aly. D uglas and Abermethy folluwed him with fuch alfiduity, that (as lord Hailes choofes to Latini:e tie exprelfion of an ancient hiforian) ne vel m:irger.di locus concederctur; but notwithltanding their utin oft efforts, Edward got fafe to Dunbar, where he was received by the earl of March, who protceted him till he could te corvered by fea to England.

Such was the decifive ba:ste of B a cehourn, the E.at greateft defeat the Enghth ever fulained from the Sicois. On the fide of the latter no ferfens of note were fin, eacopting Sir William Vipent, and Sir Wiolor I?o's the favcurite of Eduard Biuce; and fo gricion:ly was Ledward afflianed hy the Jeath of this man, that l.e car clamed, "O that the dy's wrok were undene, fo Reli 1:ad mon dicd!" On !he Eng \({ }^{2}\) ith lite were !lin 27 b.1. 167 rons and bannerets, atid 22 tdien prifoners; al kniphis Lmbsot the there were killed \(\mathrm{f}=\), and 60 taken pritorers ; of ef quites Luth in there fell ;co; but the munber of the conman men wh.o were killed or tahen was never known with any certionty. The Welfh who had ferved in the Englifh army wate fatcered over the country, and crnelly burch_red by the Scotrifl peafante. The Englifh, whinhad taken refuge among the rocks in the neightrtherd of Stirling, furrendered at diferetion: the cafte was furrendered, and the prive-ieal of England !cll into the hamt, of the hing of Sents. The fpoils of the Englith can p were immerie, and enriched the conquerers, along witi the ranfom of many noble prifonces who fell in:o their hands. Robert thowed much generofity in his treatmont of the frifoners who fell to his fare. He fet at liberty Ralph de Monthermer, and Sir Marmaduke Twerye, two officers of high rank, without ranfom; and by humane and generous effices allevated the mististure of the reft. The dead hodies of the ear! nf Girucefter ar. I the lord Clifford were feni to England, that they mishte be interred with the ufual folemnity. There was one Ballon, a Carmelite friar and poet, whom Edward is faid to have brought with him in his train to be ipetaitr of his atchievements, and to record lis riumphs. Banton was made pribrer, and ob'iged to ceic'ra:c the vitory of Robert over the Englith. Tlis he dia in wrecthed Latin Rhynies; whech, however, frocurad h.s liberty. After th: battle of Bumnckburn, the earl of Hereford retreated to the cafle of Bothwell, where he was belicged by Edward Bruce, and fonn cliiged to finrunder. IHe was excianged tor the wite, filler, and Tick knes daughter of the king, the young earl of Mart, and the fumay fic bifhop of Glafgow.
The terror of the Englifh after tice defeat at L.annockburn is almoft incredibie. Wallingham allerts, tl: it many of them revolied to the Scots, and alifited tiom in plundering their own courtry: "The Englith," fays he, "were fo bercaved of thicir wonted intrepidity, Conttirnathat an hundied of that nation would have ficul fiom tin of the two or three Scotfmen." Edward Bruce and Donglas Eng'ik. entered England on the eaftern fide, ravaged Northumberland, and laid the bithopri: of Dutham under contribution. From thence they proceeded to Richmonj, hid Appleby and fome other towns in afhes, and retumed home loaded with plunder. Edward fumnoned a parlianent at York, in order to concert means \(\Gamma\) ir the pubic fecurity; and apprinted the carl of \(l^{\prime}\) 'mbroke, formerly the guardinm of Scotland, to te guardian of the country between the Trent and tl.e 'Twes. Rcbert, however, fent ambalfadors to treat of a peace; but the Scuts were 100 much dated with their good fortune to make conceltions, and the Englifh were not yet fulficiently humbled to yi.ld to all their demand. The ravages of war were again renewed : the Scots cuntinued their incurfions into England, and levicd contributions in different places.
In : 3 : 5 , the Englifh iffairs feemed a little to ruise.

The Scots, indeed, plundered Durham and Hartlepool; but they were repulfed from Carlifle, and failed in an attempt on Berwick. The Irifh of Uliter, oppreffed by the Englifh government, implored the allittance of RoLart, and offered to acknowledge his brother Edward as their fovereign; who accordingly landed at Carrickfergus on the \(25^{\text {th }}\) of May 1315 , with 6000 men.'1his was an enterprize evidently beyond the power of Scotlind to accomplith, and which could ro: but be perceived by Robert. However, there were motives which induced him to confent. The offer of a crown, though ever fo vilionary, inflamed the ambition of Edward Bruce, whofe impetuous valour inade no account of dificulties, however groat. It might have been deemed ungenerous, and perhap; would not have been p litic or fafe, to have rejected the propofals of the Irifh for the advancement of his brother, to whom the king owed more than he could repay. Befides, the invafion

1; 1

\section*{He is de-} feated and killeu'. of Ireland feemed a proper expedient for dividing the Englith forces. The event proved unfortunate. Edwidl, after performing and fuffering more than could almoll have been expected fom humin nature, was at lait defeated and killed by the Englith, as is related un. der the article Ireland, \(n^{\circ} 42\).

The king himfelf had gone over into Ireland, in order to afith his brother in attempting the fubjection of that country; and during his abfence the Englifi had made feveral attempts to difturb the tranquillity of ScotEdmund de Cailaud, a knight of Gafcony and goverr.or of Berwick, invaded and wafted Teviotdale; but whilie he was rcturning home loaded with fooil, he was altacked, defeated, and killed by Douglas. Soon after this, intelligence was conveyed to Douglas that one Robert Neville had boanted that he would encounter him whenever he faw liis banner difplayed. Douglas did not long delay to give him an opportunity. He advanced to the reghbourhood of Berwick, difplayed his banner, and burnt fome villages. Nerille, provoked at thefe ravages, took the field, encountered Douglas, and was defeated and killed. By fea the Englifh invaded Scotland, and anchored off Inverkeithing in the frith of Forth, where they foon alter landed. Five hundred men, under the command of the earl of Fife ard the fheriff of that country, attempted to oppore their landing, but were intimidated by the number of their enemies. William Sinclair bithop of Dunkeld larpened to meet the fugitives; and having by his repr: aches obliged them to rally, he lec them on again to the charge, and drove the Englifl to their hhips with confider.ble lofs. For this exploit Robert confet red the title of the king's lijhop on Sinclair; and he was long remembered by his countrymen on this account.

In 1317, atter king Robert lad returned from his Irifh expedition, a buill was iffued by the pope (John XXII.) cor:minding a two years truce hetween Engluad and Scotland, under pain of exeommunication. Two cardinals were difpatcled into Britain to make hinown his conmands; and they were privately enpowwa.l to inflit the highenf fipiritual cenfires on Robert Bruce, or whomioever elfe they thought proper. About il:e begirining of Septermber : 131 , two melliengers were 1.nt to Robert by the cardimals. The king gave them
a gracious reception ; and after confulting with his barons returned for aniwer, that he very much defired a good and perpetual peace, cither by the mediation of the cardinats, or by ary other means. He allowed the ofen letters from the pope, whicl, recommended peace, to be read in his prefence, and liftened to them with alue refpect. But lic would not receive the fald letters addreffed to Ro'crt Biacc governor of Scolland, alleging, that there nigit be many of his barons whofe names were Robert lire e, and that thefe barons might probably have fome thare in the government. Unlefs, therefore, the letters were adurelled to lim as king of Scotland, he conld not receive them without advice of his parliament, which he promiled immediately to affemble on the occafion. The ineffengers attempted to apologife for the omiffion of the title of King. "The holy church was not wont," they faid, "during the dependence of a controverfy, to write or fay any thing which might be interpreted as prejudicial to the claims of either of the contending parties." "Since then," anfwered the king, "my ppiritual father and my holy mother would not prejudice the caufe of my adverfary by beftowing on me the appellation of king during the dependence of the controverfy, they cught not to have prejudicel my caufe by withdrawing that appellation from me. I am in polfetfion of the kingdom of Scotland; all my people call me king ; and foreign princes addrefs me under that titic; but it feems that my parents are partial to their Englifh fon. Had you prefumed to prefent letters with fuch an addrefs to any other fovereign prince, you might perhaps lave been anfwered in a harther fyle; but I reverenice you as the meffengers of the holy fee."

The meflengers, quite abafhed with this reply, changed the difcourfe, and requefted the king that he would confent to a temporary ceffation of hoftilities; but to this he declured, that he never would confent, while the Englifh daily invaded and plundered his people. His counfellors, however, informed the meffengers, that if the letters had been addreffed to the king of Scots, the negociations would inftantly have been opened. This difrefpectful omifion they imputed to the intrigues of the Englifh at the court of Rome, hinting at the fame time that they liad received this intelligence from Avignon.

A papal thefe proceedingengers had informed the cardinals of truce prothe papal truce in Scotland; in which hazardous of Scotland. fice they cmployed Adam Newton, guardian of the monaftery of Minorites at Berwich, who was charged with letters to the clergy of Scotland, particularly to the bifhop of St Andrew's. The monk found the king ercamped with his army in a wood near oid Cambus, making preparations for affanlting Berwick. Perfonal accefs was denied to the king; but the monk, in obedience to his mafters, proclamed the twnee by the authority of the pope. The king fent him for antwer, that he would litten to no bull-, till he was treated as king of Scotland, and had made himfelf mater of Berwick.

The poor monk, terrified at this anfwet, requefted which is cither a fafe condnd to Berwick, or permiffion to pals difregarded into Scutland, and deliver his letters to the Seottill by thekirg, clergy. lioth were refufed; and he was commanded to leave the country without lofs of time. He fet nut for Derwict; but in his way thithor was attacked by

Sineland. robbers, or fume who pretended to \(b c\) fo. By them lie \(\underbrace{\text { sin }}\) was Aripped and robbed of all his parchments, together with his letters and inftrugions; the robbers alfo, it is faid, tore the P'pe's bull, without any regard to its fancity.

In 1318 , king Robert proceeded in his enterprize againt Berwick, but refulved to employ artifice as well as force in the redugion of it. A citizen of Berwick, by name Spulitas, having been ill ufed by the governor, refolved to revenge himfelf; and therefore wrote a letter to a certain Scottilh lurd, whofe relation he had married, offering on a certain night to betray the pof where he kept guard. The nohlenan communicated this important intelligence to the king. "You di.l well," faid Robert, "in making me your confident; for if you had told this either to Randolph or Douglas, you would have offended the one whom you did not truft : Both of them, however, fhall aid you in the execution of the enterprizc." 'The king then commanded him to repair to a certain place with a body of troops; to which place he alfo gave feparate orders to Douglas and Randolph to repair at the fame hour, each with a body of troops under his command. The forces thus cautioully affembled marched to Berwick, and, affitted by Spalding, faled the walls, making themfelves mafters of the town in a few hours. The garrifon of the caftle perceiving that the number of Scots was but fmall, made a defperate fally with the men who had fled into the cafle from the town ; but, after an obflinate consict, they were defeated and driven back, chiefly by the extraordinary valour of a young knight named Sir William Keith of Galfon. - This happened on the 2 Sth of March

King Robert no fooner heard of the fuccelis of his forces againf the town, than he haftened to lay fiege to the calle of Berwick. This was foon obliged to capitulate; after which the Scots entcred Northumberland, and took the caftes of Wark, Harbottle, and Mitford. In May, they again invaded England, and penetrated into Yo:kthire. In their progrefs they burnt the towns of Northallerton, Boroughbridge, Scarborough, and Skipton in Craven, forcing the inlabitants of Kippon to redecin themfelves by paying 1000 merks: after which they returned to Scotland with much booty; and, as an Englifh hiforian expreffes it, "driving their prifoners before them like flocks of thece."

This year the interpofition of the pope was obtained againt Robert, with a view to intimidnte the Scottith nation; and the two cardinals refiding in England were commanded to excommunicate Robert Bruce and bis adherents, on account of his treatment of the meffengers of the holy fee, and his alfault of Berwick, after a truce had been proclaimed by the papal authority. This fentence was accordingly put in execution, though Robert had certainly been excommunicated one, if not oftener, before. Mcffengers were fent from Scotland to Rome, in order to procure a reverfal of the fentence; but Edward difpatched the bifhop of Hereford, and Hugh d'Efpencer the Elder, to counteract this negocialion, informing his holineis at the fame time of certain intercepted letters which had been written from Avig. non to Scotland; upon which the pope ordered all the Scois refiding at Avignon, and all of that place who had correfponded with Scothand, to be taken into cuftody.

Vo_. Svi.

The mof remarkable tranfastion of this year, how. Sentiand. ever, was the defent and death of Edward Bruce is Ireland; of which an account is given under the article Ireland, \(n^{\circ} 4^{2}\). His body was quartered, and ditaibuted for a public fpectacic over Ireland: and his head was profented to Ejward by J, hn Jurd Bermingham the commandsr of the Enghlh a:my, in return for which fervice, he was rewarded with the titie of Liurl of Lozeth.

In the mean time Fdward, who had fummoned a parliament to mect at Lincoln, wats whlieed (1) prorogue it on account of the Scottifh insation, and to aftemble an army at York for the defence of his country. At Michaclmas it was determined, in a parlidment held at Inndon, that every city and town in England Gould furnifha certain proportion of rach completely armed. Thus a confiderable body of troops was foon raifed; but, when they aff.m' ad :at York, their party-animofitics and mutual di.truf rofe to fich an? height, that it was found necefiary to fend them back to their habitations.

In 1319, Eiward, hwing fucceded in well in his negociations with the court of \(R\) me, icinlved to mal:e fimilar attempts with other puwe:s to the prejudice of the Scotith nation. Accoidingly he requetted the count of Flanders to prohibit the Scots from entering lis country: but to this requed he reecivod the following remarhable reply: "Flanders is the common country of all men; I cannot prohibit any merch.nn:s from traflicking thither, for fuch prohibiticn w..11 prove the rain of \(m y\) penple." Finding limitle baf piluar fled in this attempt, the Englifh monaich nuce more again irdetermined to have recourfe to war; and wi:h this wades sevtview commanded his army to afiemble at Nicwcafle up. on Tyne, on thic 24 th of July 1319 : but before he procceded, he requelted the prayers of the clergy fur the fuccefs of his expedition; and to render their prayers the more effectual, he at the fime time domanded from them a great fum of money by way of loan.
'Every thing being now in readiuefs, the Engith army approached Berwick, which was commanded by Walter the Stexard of Scotlind. '1'his noblem.tn had long apprehended an attack frum the Englifh, and had taken cvery means of defence in his power. The enemy, however, confiding in their numbers, niade a general alfult; but ware repulfed on the 7 th of \(\mathrm{Sc}_{\mathrm{c}}\);tember, after a long and obftinate conten. Their teat attempt was on the fide towards the river. At duit time the walls of Derwick were of a: inconfiderable height; and it was propofed to bring a veffelclofe to then, from whence the trnops might enter by a drawbridge let down from the maft. But the Siuts anar yed the altailants fo mach, that ther could no: brir, this velTel witbin the proper difance; and at the ebb of the tide i : grounded, and was burnt by tle befieged. -The Englifh had then recourfe to a new-invented ergine which they called a foow, but fir wh it reafina is unknown. In many particulars it relen:bled the tef fubt. arieturia of the ancients. It appears to have heen. large labric compofed of timber, and well-roufed, having! A.ages within it, and in height furpalling t.: wall of the town. It was moved upon whech, and ferved for the double purpore of conduaing the miacrs to the foot of the wall, and arm.d men th the form. This machine vas countentied by one contanted by Jo?n

Dellewyed ty the S.1.s.

Crits, I innifh cngincer in the Soots fervice. This was a lind of moveable crane, whereby geat dones miglat be raifed on high, and then let fall upon the crem:. 'The Englifh made a general atfault on the gianter towardstlefea, as well as on the land fide; fo 1hat the gavrifor, cahaufted by continual fatigue, could f:arce maintain ticir polts. The great enginc mored can to the walls; and, though fones were iaceffantly difelarged againf it from the crane, their effect was f) fmall that all hope of preleminy lerwick was luft. At length a kuge fone flruck it with fuch foree, that the teams gave way, and the Scots pouring down comUuttibles upon \(i\), it was raduced to athes. The Englith, however Itill continued the attack. The Steward, With a icfrec of 100 men , went from poit to pot, relieving thofe w! were wounded or unfit for combat. One fuldier of the referse only remained with him whea :an alarm was given that the Englith had burnt a bar1 :er at the port callad St Mary's, pr flifled themfelves of i.e draw bridgc, and fired the gate. The Stctrard 1 aftened thither, called down the guard from the rampari, ordered the gate to be let open, and ruhhed out upun the enemy. A defperate combat enfued, and continued till the clofe of the day, when the Englifh commanders with 3rew their troops.

No:withotanding this brave defence, it was evident that the town could not hold out long without a fpeedy relief; and Robert could not, wi:h any probability of fuccefs attack the furtified camp of the Englifh. He therefore determined to make a powerful diverfion in England, in order to oblige Edward to abandon the undertaking. By order of the king, 15,000 men entered England by the weftern marches. They had concerted a plan for carrying off the queen of England from ber relidence near lork; but bcing difappointed in this attempt they ldid wafte Yorkihire. The archlifoop of loak hatily collected a numerous body of ommons and ecclefialtics, with whom he encountered
lhe Scots at Mitcon, near Borough-bridge, in the northiding of Iolkfhire. The Englifh were inftantly rout. cd; 5000 were left dead on the field, and great part of thole whofled perifhed in the river Swale. In this attion 300 eecleftafies lof their lives. The news of this fucce\{sful in oad alarmed the beliegers of Berwick. 'lhe barons whofe eftates lay to the fouthward remote from the Scotith depredations were eager for continuing the fiege. But they were oppofed by thoie of the ninth; who were no lats eager to abandon the entermife, and return to the detence of their own country. With them the eatl of Lancafter concurred in opinion; Who, underfanding that his favourite manor of Ponteiraft was expofed to the ravages of the Scots, departed with a!ll his adherents. Edward, upon this, drew off the renmander of his arnyy, and attempted to intercept Randolph and Douglas; but they eluded him, and deturned in fafety to Scotland.
'the unfuccefsful event of this lat attempt induced lidward eerinully to think of peace; and accordingly a tuce between the two nutions was concluded on the 2 If of Decenber 1319; which interval of tranquillity the Scots made ufe of in addrelling a manifelto to the Ifipe in juftification of their rable. This was drawn ip in a dpirited manner, and maje a very confiderable alteration in the councils of Rome. The pope, foredecing that Robert would not be ternified into fubmif-
fions, ordered Edurard to make peace with him in the Scotakd. left manner he could. A negociation was accordingly fet on foot, which foon terminated incerecually; the truce was not renewed, and in 1322 a mutual invafion took place. The Scots penetrated into Lancathire by England the waftern marches ; and, after plundering the country, ayain invareturned homé with an excraordinary booty ; while Edward made great pleparations for an expedition int? Scotland, which took place in Auguft the fame year. In this, however, he wis not attended with fucceli. Robert had cauted all the cattle to be driven off, and all the effects of any value to be rem ved from Lothian and the Merfe; fixing his camp at Culrofs, on the north fide of the frith of Furth. His orders for removing the cattle were fo punctually obeyed, that, according to common tradition, the only prey which tell into the hands of the Englifh was a lame bull at Tranemt in Eaft Lothian. Edward, however, ftill proceeded, and penetrated as far as Edinburgh, but without any hopes of fubduing the kingdom. His provifions being confumed, many of his foldiers perifhed for want ; and he was obliged at laft to retire without having feen an enemy. On their return, his foldiers burnt the abbers of Holyruod, Melrofs, Dryburgh, \&c. killed many of the monls, and committed other facrileges: but when they returned to their own country, and began again to enjoy a plentiful living, they indulged themelves in fuch excelfes as wereproductive of mortal difeafes; irfomuch that, according to an Engl!fh hiftorian, almoft one half of the great army which Edward had brought from England with him were deftroyed either by hunger or gluttony.

No fooner were the Englifh retired than they were purfired by the Scots, who laid fiege to the cafle of Norham. Edward lay at the abbey of Biland in Yorkfhire, with a body of troops advantageoully polted in the neighbourhood. The Scots, invited, as is faid, by fome traitors about the king's perfon, aitempted to furprife him; and it was with the utmof difficulty that he made his efcape to York, abandoning all his baggage and treafure to the enemy. The Englith camp was fuppofed to be acceflible only by a narrow pafs, but Douglas undertook to force it, and Randolph prefented himfelf as a volunteer in this dangerous fervice under his friend Douglas. The Highlanders and men of the Iftcs climbed the precipice on which the Erglith camp Atond, and the enemy were driven out with great lofs. The Scots purfued them to the very gates of York, walted the country without controul, and returned home unmolefted.

Edward, difheartened by repeated loffes, agreed to a ceflation of arms " with the men of Scotland who were engaged in war with him," But the king of Scotland would not ecnfent to it in that form ; however, he gave his confent, on the proper form being employed, to which Edward now made no objection. This treaty was concluded on the 30 th of March \(13^{23}\), and was to endure until the 12 th of June 1336 . It was agreed, that, during the continuance of it, no new fortrelfes fhould be erected in Cumberland, to the north of the 'I'yne, or in the counties of Berwick, Roxburgh, or Dumfries; and by a very lingular article it was provied, that "Bruce and the people of Scotland might procure abfolution from the pope; but in cafe thete. was no peace concluded before the expiration of the truce,

\section*{187} G-eat part of Edward's army defiroyed.

\section*{138}

The Englith defeated and driven out of theircamp,

Seolland. truce, that the fentence of excommuniention fhould te-
vive." The tectiy was ratified by Robert, under the Atyle of the king of Scotand, 7 th of June 1323 .

The next care of Rnbe:t was to reconcile himielf to the church, and to obtain from the pope the title of king, which had been fo long denied him; which at haft, though not without great difficu'ty, was obtained. This year a fon was horn to the hing of Scotland at Dunfermline, and named David. The court-pocts of the time forctold, that this infant would one daj rival h's father's fime, and prove vitorions over the Englith. But farce had this future hero come into the world, when a rival began to make his appearance. John Baliol, the unfortunate king of Scotland, had long been dead; but left a fon named Edward, heir to his pretenfions to the crown. The young prince bad refided on his paternal eftate in Normandy, neglected and forgotten; but in \(132+\) was called to the count of England, for the purpofe, undoubtedly, of fetting him up as a sival to young David Bruce, in cafe his father, now broken with fatigues, thould die in a fhort time. The negociations for peace, however, fill went on ; but the commiflicners appointed for this purpofe made little progrefs, by reafon of demands for feudal tovereignty ftill made by the Englith. The reconciliation with the church was alfo broken off, by reafon of the Scots liecping poffetion of Berwick. This had been taken during the papil truce; and Robert thought proper fill to lie under the fentence of excommunication rather than to part with fech an important fortrefs.

In the beginning of the year 1327, Edward II. was depofed, and fucceeded by his fon Edward III. then in his 1 th year. He renewed the negoc:ations for peace, and ratified the truce which his father had made; but hearing that the Scots had refolved to invade England if a peace was not immediately corcluded, he fummoned his barons to meet himat armsat Newcafle, and fortificd York. - We are not certainly informed of the reafons which induced the Scots at this time to difregard the truce; hovever, it is certan, that on the 15 th of June 1327 , Douglas and Randolph invaded England by the weftern marches, with an army of 20,eco horferen. Againt them Edward III. led an
diers now began to murmur: and it was refo'ved again to proceed fouhtwards. The kiag proclaimed a seward

30 otial 1 oflunds, to the value of 1001 yearly for lies to 124 perans, to the valite of 1001 . yearly for life, to the ts ohaget perfon who thoulal firft dilcuver the enemy "r,n dry to off. \(r a\) ground, where they might be attactice;" and many reward for knights and efquires fuam actofs the river on this whorerin. frange errand. 'Ihe army continued it; march for wherethey three days withont any ners of the Scots; bat on the fourth day, certain acecunts of them were brongh: by an efquire, 'Thomas Rokelby: whoreporter', that " Lh: Scots had made him ptifoner; but that the \(r\) leaders, underftanding his butine?s, had fet lim at liecrity ; fiy". ing, that they had remained for eight d.iss on the fam: ground, as ignorant of the motions of the Enerlith as the Englith were of theirs, and that they were delirous and reddy to combat." With this man for their guids, the Englifl foen came in view of the Scots. They were advantageonlly pottel on a rifing ground, having the river Were in front, and their Hartiks fecured bs rocks and precipices. The Englith difmeunied an. 1 advanced, heping to allure the Siots from their ftren: poft ; but in vain. Edward then fent a herald to Rath. dolph and Douglas, with a meffige in the file of chivalry: "Either," liys he "fuffer me to pals the river, and leare me room for ranging my forces; or do you pafs the tiver, and I will lcave youroom to range yours; and thus thall we fight on equal terms." To this the Seottith commanders anfwered, "WTe uill do neither. On our road hither we have buint and fpoiled tho country; and here we are fixed while to us it feems good; and if the king of England is cffended let him come cver and chantife us."

The armies continued in figlit of each other for two days; after which the Englifh, undertlanding that their enemies were dittrelfed for provilions refolved to maintain a clofe blockade, and to reduce them by famiric. Next day, however, they were furprifed to find that the Scots had fecretly decamped, and taken poft two miles up the river in ground til! !?ronger, and of m re dillicult
army, contilling, at the lowelt calculation, of 30,000 men, who affembles at Durham on the 1 ih of July. The Scots proceeded with the atmoft cruelty, burning and deftroying every thing as they went along; and on the 1 Sth of the fame month, the Englith difcovered them by the fmoke and flames which marked their accels, amidt a great wood. 'I'he Linglith encamped oppofte to them near Simhope park." At midnight Douglas undertook a molt deperate erterprife, fornewhit refembling thofe of the ancient heroes. With 200 horfemen l.e apprasched the Einglifh camp, and entered it under the guite of a chief commander calling the rounds. Having thus eluded the certinels, lie parfed on to the royal quarters, nerthrew every thing that oppofed lim, and furiouny athaulted the king's sont. The domeltics of Edward defperatcly defended their maller ; and his chaplitn, with many others of his houfehold, were 拄ia. However, the king himfelf cicaped; and Dunglas, ditappointed of his prey rufhed through the enemy, and effected a retreat with inconladerable lofs. - The foilowing day, the Englith learned from a prifoner, that otders had been iffued in the Scotti?! camp for all mea t hold thendelves in radinets that evening to \(f\) llow the banner of Doujlas: on which, apprehending an attack in the niphe, they prepared Sor batte, lighting great fires, and keeping a llrit watch; Lut in the mornine, they were informed by two trumpeters whom they had taken prifoners, that the Scots had decamped batore milnight, and were returning to
 dited, and the army remsined for fome hours in order riwis come ofba tle; but at length fire fouts having cooffed li= 1 . \(\%\). progrefs. They marched forward in order of battle towards the quarter where the limoke was perceived; but, meeting with no enemy for two days, they concluded that the Scots had retired. Difencumbering themfelves then of their heavy baggage, they refolved by a forced march to reach the river 'Tyne, and, ty porting themelves on the north bank of that river, to intercept the Scots on th-ir return. On the zoth of July, the cavalry having left the infantry belind, croffed the river at llaidon: Lut before the relt of the arniy could come ur, the siver was fo fwelled hy fudden rains, that it could no longer be forded; and thus the troops remailed divided tor feveral days, without anyaccommodation for quatters, and in the greateft want of provitions and fordere. Tlie fol-

\section*{S C O} \(\underbrace{\text { Sccrlund. }}\) rixer, returned with certain intelligence that the Scottith camp was totally deferted: which when the young hing of Ingland was certainly informed of, he hurf into tears; for the enterprife, which thus terminated in difappointment and difhonour, had coft an immenfe fum. Evely preparation had been made for oppofing an enemy, and auxiliaries had even been procured at a moft enormons expence from Hainaul. Thefe auxilarics confitled of heavy-armed cavalry; and they were now fo much worn rut, that they could farcely move. Their horfes were all dead, or liad become unferviceable, in a campaign of three wecks; fo that they were ohliged to procure brafes to convey themfelves to the futio of Englind. Edward having refted at Durham for fome days, marched to York, where he difbanded lhis arm:- Burtour a Scots hiftorian, relates, that there was a morals in the rear of the Scottifh camp, which he catls the two.mile morafs; that the Scots made a way over it with bruflwood, removing it as they went along, that the Englif might not purfue them by the lime way. The Englifn hiftorians are filled with deforiptions of the frange appearance of the deferted camp of the Scots. They found there a number of thins flretclied between take:, which ferved for kettles to boil thicir meat ; and for bread, each foldier carried along with him a bag of oatmeal, of which he made calec, toafting them upon thin iron plates, which appear to have been part of their armour.

On the return of Douglas and Randolph, the king led his army againft the eaftern horders, and befieged the cattle of Norham. However, in 1323 , Edward, wearied out with continual loffes and difapointments,
confented to a perpetual peace between the two kingdoms on the following conditions. 1. The ftone on which the kings of Scotland were wont to fit at the time of their cironation, thall be reftored to the Scots. 2. The king of England engages to employ his good offices at the papal court for obtaining a revocation of all fpiritual proceffes depending before the holy fee againf the king of Scots, or againt his kingdom or fibjects. 3. For thefe caufes, and in order to make reparation for the ravages committed in England by the Scots, the king of Scots thall pay 30,000 merks to the king of England. 4. Reflitution fhall be made of the poffeffions belonging to ecclefiaftics in either kingdum, whereof they may have been deprived during the war. 5. But ibere fhall not be any reftitution made of inheritances which have fallen into the hands of the king of England or of the king of Scots, by reafon of the war between the two nations, or through the forfciture of former poffeffors. 6. Johanna, fifter of the king of England, thall be given in marriage to David, the fon and heir to the king of Scots. 7. The king of Scots fhall provide the princefs Johanna in a jointure of 20001 . yearly, fecured on lands and rents, according to a reafonable eftimation. 8. If cither of the parties thall fail in performing thefe conditions, he fhall pay 2000 pounds of filver to the papal treafury.

This peace, ratified at Northampton, is fyled ignominious by the Englifh hiftorians, and the marriage of the Scots prince to the king of England's tifter, denominated tbat bafe marriaze; becaufe at this time all pretenfions to fovereignty over Scotland were given up, though they had in vain attempted to eftablifh them
by a ruinons war of 20 yearc. The marriage of the in- Scotland. fant prince was celebrated on the 12 th of July 1328 .

On the 7 th of June 1329 died Robert Bruce, unqueftionably the greateft of all the Scottith monarchs.
His death feems to have been occafioned by the exceffive fatigues of military fervice; and his difeafe, called by the hiftorians of thofe times a leprofy, was probahly an inveterate fcurvy, occafioned by his way of living. He died at the age of 55 . He was married to Ifabella, daughter of Donald the tenth earl of Marr; by whom he had a daughter named Marjory. married to Waiter the fleward of Scotland ; whofe hufband died in 1326 . The fecond wife of Rubert was Elifabeth, the daughter of Aymer de Burgh earl of Ulfter. By her he had a fon, David II.; a daughter named Margaret, married to William earl ot Sutherland; another, named Matilda, married to an e§quire named Thomas Ifaac; and Elizabeth, married to Sir Walter Oliphant of Gafk. He liad alfo a natural ion named Robert.

That king Robert I. was a man of unqueftionable vistue and humanity, as well as unequalled in the knowledge of the military art, muft be evident from many particulars already related. The only queftionable part of his character is his fevere punifhment of a confpiracy formed againt him in the year 1320; a relation of which, to avoid interrupting our detail of more im- him.
portant matters, we have deferred till now.-The chief of the confpirators were William de Soulis, whofe anceftor had been a candidate for the crown of Scotland; the countefs of Strathern, and fome other perfons of high rank. The countefs difcovered the plot; after which Soulis confeffed the whole, and was punifhed with perpetual imprifonment; as well as the countefs, notwithflanding her having made the difcovery. Gilbert de Malyerb and John de Logie, both knights, ard Richard Brown an efquire, were put to death as traitors hut the perfon molt lamented was Sir David de Brechin, for his bravery ftyled the flower of chivalry. He was nephew to the king, and ferved with great reputation againft the Saracens. To him the confpirators, after having exacted an oath of fecrecy, revealed their defigns. He condemned their undertaking, and refufed to thare in it; but did not difcover it on account of the oath he had taken. Yet for this conceal. ment he was tried as a traitor, condemned and executed, without regard to his perfonal merit or his relation to the king. The confpirators were tried before the parliament at Scone in 1320 ; and this feffion, in which fo much blood was thed, was long remembered by the vulgar under the name of the black parliament. Whether there was any thing real in this confpiracy, or whether the king only made ofe of this pretence to rid himfelf of fuch as were obnoxious to him, cannot now be known with certainty.

After the death of Robert, the adminiftration was affumed by R andolph, in conferce of an paft aflumed by Randolph, in confequence of an act paffed Randolph in 1318, by which he was appointed regent in cafe of appointed the king's death. In his new charafter he behaved himfelf in a moft exemplary manner; and by impartially difcharging the daties of his ftation, and rigidly adminiftering jultice, he fecured the public tranquillity in the moft perfect manner. A fevere exercife of juitice was now rendered not only neceflary ,but indifpenfable.

Douglas fetsout for the Holy Land with King Rnhert's heart

During a long courfe of war, the common people liad been accuftomed in plunder and bloodthed ; ind having now no Englith enemies to employ them, they robbe 3 and murciered one another. The methods by which Randolph repreffed thefe cimes were much the fame with thofe which have been adopted in latter times; for he made the counties liable for the feveral robberies committed within their bounds. He even ordered the farmers and labourers not to houfe the tools employed by them in agriculture during the nighr-time, that the fhentl's officers might be the mose vigilant in fecuring them. He gave uders for feverely punilling all vagitbonds, and obliged them to work for their livelihand; making prochmation, that no man flould be admitted into a town or bornugh who conld not earn his bread by his labour. Thele regulations were attended witl the mott lalutary effects. A fellow who had fecreted his oun plough-itons, pretending that they were itolen, being deteited by the therift's officers, was intantly hanged. A certain man having killed a prieft, went to Rome, and obtained abolution from the pope; after which be boldly returned to Scotland. Kandolph ordered him to be tried, and, on his conviction, to be executed: " Becaufe," faid he, "althongh the pope may grant ablolution from the firitual confequences of fin, he cannot fereen offenders from civil punilhment."

King Robert, jutl before his death, had defired that his leart might be depofited in our S.oviour's fepulchre at Jerufalem ; and on this errand the great commander Douglas was employed, who fet fill in June 1330 with a numerons and fplendid retinuc. He anchored off Sluys in Iflanders, the great emporium of the low countries, where he expected 10 find companions in his pilgrimage; but learning that Alphonfus XI. the young king of Leon and Callile, was engaged in a war with Ofmyn the Moor, he could not refift the temptation of fighting againft the enemies of Chriftanity. He met with an honourable reception at the court of Spain, and readily obtained leave to enter into what was thought the common caufe of Chriftanity. The Spaniards firt came in fight of their enemy near Thebet, a caftle on the frontiers of Andalulia, towards the kingdom of Granad ı. The Moors were defeated; but Douglas giving way to his impetuons valour purfued
the enemy too eagerly, and throwing among them the cafket which contained the heart of his fovereign, cried out, "Nows pars thou onwar! as thou wert won!; Durlas will follow thee or die" The fugitive ral 203 lied and furrounded Douglas ; who, with fugitives ral- 1 s killed by follower, was killed in ter St Clair of Rollin. His body was brought back to
Scotlanc, and intorrd in the church of Douglas. His countrymen perpetulted his memary by leftowing up. on hin the epithet ot the gand Sir James Douglas. He was one of the gicatell commanders of the age; and is livid to lave beon engaged in 70 batles, 57 of which he gained, and was deferted in 13 .-Of him it is re. ported, that meeting with an nfticer at the court ot Alplonntis, who had his face quate disfigured with icars, the hitter faid to him, "It altonithes me, that you, who are laid to have feen fo much fervice, fhould have no marks of wounds on your fice." "Thank heaven," anfwered Douglats, "I had dway's an arm to protect my face."

In 1331, Edward Baliol began to renew his preten. Edward fions to the crown of Scotland, about the fame time Baliol that David II. and his confort Johanna were crowned at Scone; which ceremony was performed on the 2 fth of Noember. Some hiftorians relate, that he was excited to this attempt by one Twynham Lnwrifon, a perfon who had been excommunicated for refufing to do penance for adultery, and afterwards was obliged to fly on account of his having. way-laid the official, beat lim, and extorted a fum of money from him. But however this may be, it is certain, that in this year differences began to arife with England, on the following account It had been provided by an article of the treaty of Northampton, that "Thomas lord Wake of Ledel, Henry de Beaumont, called earl of Buchan, and Henry de Peicy, fhould be reflored to their eltates, of which the king of Scots, by realon of the war between the two nations, had taken poffeffion." This article had been executed with refpect to Percy, but not to the other two; and though Edward had repeatedly complained of this megledt, he could not obtain any fat tisfaction (0).

The difinherited barnns now refulved to invade Scotland, though their force confifted of no more than 3000 infantry,
(c) As this is an important period of hifory, we thall here tranferibe the opinion of lord Hailes conrerning the caufes of this flrange delay of executing an article feemingly of little importance where a nation was concerned. "By the treaty of Northampton," lays he, "all the claims of the linglifh barons to inheritances in Scotland were difregarded, excepting thofe of Henry de Percy, Thomas lord Wate of Ledel, and Henry de Leaumont. Percy procured fatislaction: but the others did not.
"Henry de Beaumont, in the reign of Edward II. had alfociated himfelf with the nobility againft the D'Efpenfers, and on that aceount had fuffered imprifonment and exile. He aided queen liabelta in the invafion which proved the caufe of the depofition, captivity and death of her hulband. Although, under the adminiftration of Mortimer, le had obtained a thare in the partition of the (poils of the D'Efpenfers, he perfifted in oppofing the meafures of the new favounte; and alhough his own interefts were fecured by the treaty of Northampton, he boldly exclaimed againit the injuttice done 10 the other barons by that tieaty. He joined the princes of the blood royal in their attempt to refcue the young king from the hands of Ifabella and her minion, and place him in their own ; and, on the faiture of that ill-advifed confpiracy, he again took refuge in foreign parts. It afto pears that lord Wake, having followed the pelitical opinions of Henry de Beanmont, was involved in like calanities and difgrace. While the queen-dowager and AIortmer retained their influence, the claims of thofe wo barons were altogether overlooked: But within forty-eight hours after the execution of Mortimer, a peremptory demand was made by Edward IIJ. to have their inheritance refored.
"The demand was unexpeted and alaming. Made at the very moment of the fall of Ifabella and Montimer,

Randolph the regent dics.
infuntry, and 400 mcn at arms. Fidward would not permit them to enter Scotland by the ufual way, as he himfelf did not jet choofe openly to take part in their quarrel. For this reafon they were obliged to take hlipping, and landed at a place called Raven/bare, Raven/sur, or Raverfourgh, at the mouth of the Humber (H). Randolph, having intelligence of the Englifh preparations, had marched an army to the frontiers of Eaf Lothian; but, being afterwarls informed of the naval armament, he marched northwards; but died at Muffelburgh, fix miles eait of Edinburgh, on the 20th of July \({ }^{1} 33^{2}\). With him die 1 the glory of Scitland. The earl of Marr, a man whofe only metit confifted in his being related to the royal family, was chofen to fucceed him in the regency.-Edward, in the mean time, fell upon a molt curious expedient to fhow the juftice of his caufe. In March 1332, he had publifhed a prohibition for any perfon to infringe the treaty of Northampton. The difinhcrited lords had been fuffered to embark, exprefsly for the purpofe of invading Scotland, after this prohibition was publifhed. After thry wevere gone, Henry de Percy was empowered to punifh thofe who thould prefume to array themfelves in contempt of his prohibition; and becaufe he underfood that the Scots were arming in order to repel thofe invaders whom Edward had indirectly fent againft them, he empowered Henry de Percy to arm againft them.

On the 3 tf of July, Edward Baliol and his affeciates landed in the neighbourhood of Kinghorn, on the Forth ; routed the Earl of Fife, who oppofed them; and marched next day to Dunfermline. Having then ordered his fleet to wait for him at the mouth of the Tay, he proceeded northwards, and encamped on the Miller's acre at Forteviot, with the river Earn in front. Nothing, however, could be more dangerous than his fituation at prefent, and his deflruction would have been inevitable. The earl of Mart was encamped with a nit-
merous army on the oppofite bank of the river Earn, in the neighbourhood of Duplin; and another, wearly as numerous had adranced from the fouth, through the Lothians and Stirlingfhire, and fixed its quarters at Anchterarder, eight miles to the weft of Forteviot. Hiftorians differ as to the number of the two armies. Fordun fays, that the regent had with him 30,000 men, and the earl of March as many ; and that Balinl had between 500 and 600 men at arms, that is, horfemen completcly armed. Hemingford rectons each of the Scots armies at 40, coc, and Baliol's at 500 armed men. Kinyghton fiys, that Baliol, when he landed in Fife, had 300 armed men, and 3000 more of different forts; but that he had in all only 25.00 men in his camp at Earn. In this defperate fituation, the Englifh general formed a delign of attacking the Scots in their camp. They were directed to a ford by Andrew Murray of Tullibardine. The Scots kept no watch, but abandoned themfelves to intemperance and riotous mirth; while their enemies, led by Alexander Moubray, croffed the river at midnight. They afcended a rifing ground, came unperceived on the right flank of the Scottifh army, and made a dreadful flaughter. At the firf attack, young Randolph hafted with 300 men at arms to oppofe the enemy ; and being feconded by Murdoch earl of Menteith, Alexander Frsfer, and Robert Bruce natural fon to the late king, he gave a check to the Englifh, and maintained the combat on equal terms. But now the regent himfelf, along with the whole multitude rufhed forward to battle without the leaft order: fo that while the hindmoft preffed on, the foremoft were thrown down, trodden upon, and fuffocated. The flaughter lafted many hours, and the remains of this vaftarmy were utterly difperfed. Many men of eminence were killed; among whom were Donald earl of Marr, author of the whole catallrophe; Thomas earl of Moray, Murdoch eall of Menteith, Robert earl oi Carrick, Alex.
and in behalf of men who had lcudly protefted againtt the treaty of Northampton, it indicated a total and perilous change in the fyttem of the Englifh.
" Randilph, of late years, had beheld extraordinary vicifitudes in England. The D'Efpenfers alternately perfecuted and triumphant, and at length abafed in the dult. The fugitive Mortimer elevated to fupreme authority, victorious over the princes of the bloody-royal, and then dragged to a gibbet. Hence it was natural for Randolph to wilh, and even to look, for fome new revolution, which might prove more favourable to the Scottith interefts. Meanwhile, with great reafon and good policy, he delayed the reflitution of the inheritances claimed under the treaty of Northampton, in behalf of the avowed oppofers of that treaty.
"Befides, it was necelfiary for Randolph to be alfured that the Englifh, while they urged the performance of one article of that treaty, did, on their part, fincerely purpofe to perform its more important articles, by continuing to acknowledge the fucceflion in the houle of Bruce, and the independency of the Scottith nation.
"Of this, however, there was much reafon to doubt. For the Englifh king had taken Baliol under his protection, and had granted him a paffort to come into England, wihh permiffion to refide there during a whole year ( 101 h Oftober 1330). Thefe things liad no friendly or pacific appearance.
"Be this as it will, the event tno fatally julified the apprehenfions of Randolph; for, while Edward III. was demanding reflitution of the eftates referved by the treaty of Northampton, his fubjects were arming in violation of that treaty.
" It is remarkable, that, on the \(24^{\text {th }}\) March \(133^{1-2}\), Edward appears to have known of the hoilile allociation of the difinherited barons. His words are, 'Quia ex rel itt accepimus plurimorum, quod diverfi homines de regno nofro, et ali (meaning Baliol and his attendarts), pacem inter nos, er Robertun de Brus, nuper Regem Scotorum, initarm et confirmatam infringere machirantes, diverfas congregationes hominum ad armo indics faciunt, et,
 T. iv. p. 5: A. And yer, on the 22 d A pril followirg he demanded reftitution of the mheritance of lerd Wake, one of the larons in arms;" Federa, T. iv. p. 518.
(н) This place does not now exift having been overwhelmed by the fea many centmies ago.

\section*{Jarther} furcefs of Laliul.

Alcxander Frafer, and Robert Bruce. The n.ughter
of the infmery and of the men at arms was very great; the noil probable accounts mate it 2000 men at atms, and upwards of 13,000 common fulliers. The lofe of the Englifh was incuntiderable.

The dey atter this vionory, Bualiol tnok poifefion of Perth; and, apprel.ending an attack from the carl of March, caufed the ditch to be cleared, and the town to be furtified with pal ifaloes. Whe hiof information which the earl reccivad of this dreadiul defeat was from a comenon foldier, whon fled from the place morthl'y wounded. When this poror wrethla came up, he had time to \(d\), no more than on the his wounds ; after which he fell down and expired. On lis antival at the field of battle, lie found a dreatful confirmition of the intelligence given by the iuldier; but ianead ct tuking his mathes with any prodence, he and his men hurried on headong to Perth, anuated caly by a b'ind impulte to revenge. At firt they dedigned to affault the place; but their hearts filing them, they next cetermined to reduce it by famine. This, however, could not be cone unlefs the Scots were malters at fe:l. Oie John Ciab, a Flemith engineer (whu had ditinguithed himfelf by deftroying th: fumou, engine called the fitu at the fiege of Bervick), had continued for many years to annoy the Englith on the eaftern coafts. After the hlockde of Peith was formed, he came with ten veilels to the mouth of the 'las, where the Englifh feet was, and took the thip belonging to Henry de Be.umont; but foon after all his ten velfels were buint by the Englifh in a general engagement. Af. ter this the Llockade of Perth was zaifed, the earl of March dibanded his arm̈̈, and Edward Balliol was crowned king of Scotland at Scone, on the 2 th of September 1332.
The new monarch was no fooner put in poffeflion of the kingd.m, than he left Perth in the hands of the earl of Fite, while he himelf repaired to the fouthern parts of the kingdom. But the party of king David was far from being extinguilhed. B.liol was farce gone, when the town of Per:h was furprifed, and its fortifications razed, by James Frafer, Simon Frafer, and Robert Keith. The earl of Vife was made prifomer, with his fimily and valfals. Andrew Murray of Tullibardire, who had dirested the Englifh to a ford on the river Eirn, was put to death as a traitor. Such of the Sicots as fill adhered to the interef of their infint prince, chole Sir Andrew Murray of Bothwell reent. He was a brave and antuc man, but had not as jet filticient force to attempt any thing confider-

\section*{\(\mathrm{He}_{\mathrm{c}}\) is} cruwnad king of scotland.
her jointure; and this under the penalty of \(10,000!\). to be appropriated as a portion to the young lady, or otherwitic dipofed of for her behoo?. He further eng.gyed to provid: for the maintenance of David Bruce as the kiag of England thould advife; and, lafty, he became bound to derve Edward in all his wars, excepting in England, Wales, and Ireland, for the fpace of a ye.rr to re:her, with 200 men at arms, and all at his own charges; and he bound his fucceffins to perform the like fervice with 100 men at arms. But afterwards Thard laving eng ged to mantain him on the throne of Scotland, B hool bound himfelf to forve him in all his wars whttever.

Though the greatef part of the nation fubmitted to this thani.fil treaty, it roufed the ind gnation of thofe who withed well to the liberties of their country. John, the fecondion of Randslat, now earl of Moray by the dath of his brother: Arctibald, the younget brother of the remowed Doughas; together with Simon liraler, affembled a bidy of horfemen at Moffit in Annaadale; and, fuddenly traverfing the country, aflauled Batiol unexpetedly at Aunan. His brother Henry made a grallint refiftance for fome time; but prifd, and was at hall overpowered with numbers, and killed, to- driven out gether with feveral other perfons of diftinction. Baliol himfelf cfcaped almoft naked, with fcarce a fingle attendant, and fled to lingl.nd. After his departure, the Sco:s began to make depredations on the Englifh frontiers. Edward iffued a proclumation, in which he folemnly averred, that the Scots, by their honile depredations, had violated the peace of Northampton. Baliol, in the mean time, being joined by fome Euglif, barons, returied to Scolland; took and burnt a cafle where R.bert de Colville commanded; and, eftablifh. ing his quarters in the neighbourhood of Roxburgh, began to make preparations for befieging Berwick. Juft after his arrival, Archibald Douglas, with 3000 men, iavaded England by the weftern marches, plundeted the country, and carried off much booty; in revenge for which, Sir Anchony de Lucy made an inroad into Scothand, defeated and took prifoner Sir William Douglas, celebrated in hifory by the appellation of the knight of Lidadeflile, whom Edward caufed to be put in irons. About the fame time, Sir Andrew Murray the regent attacked Baliol, with a view to difcomft him hefore the reinforcements which be expected out of England could arrive. A fharp conflict enfued at Rox-
burgh, in which the regent, attempting to refue a foldier, was taken prifoner: and thus Scotland was at once deprived of its two ableft commanders.
Archibaid Douglas was now decl.red regent; and Edward prepared to invade Scothand, in order to tale vengeance on its imhabitants, as he faid, for the wrongs they had done, and to feek fuch redrefs as might fee mı good to himfelf. Ile ordered pofiefin to be taken if the inte of \(M \mathrm{~m}\) ia his own na:ne; and foon after made it over to Sir William de Montague, whon hid fome claim of inheritance in it. The chief detign of Edward in this expedition, however, was to ojtain poffifion of the town of berwick, which had been ready ceded to li.n by Buliol. This arpeared to Beryis afs Berwak the Sents a place of \(n n\) lefs importanee than it did to beficges be Lidsard; and therefise they took all the pricantions the endin their power to prevent the lufs of it. The earl of March was anpointed to comm mad the caftic, and Sir

\section*{\(S C O\)}
satland. William Keith the town. The Scots made an obfti-nate defence; \(y\) et it was evident that they muft foon have yielded if they had not been relieved. At length the regent, with a numercus army, appeared in the neighbourhond. He endenvoured to convey fuccours into the town, or to provoke the enemies to quit the adrantage of the ground, and engage in bitule. But all his efforts were in vain ; the Englith obftructed every palfage, and toond on the defenfive.
The rege:at then entered Northumberland, walted the country, and even affaulted Bamborough calle, where Philippa the young queen of England had her relidence. He fondly imagined that Edward III, would have abandoned the liege of Berwick, after the example of his father, in circumftances not diflimilar. Edward neverthelefs perfevered in his enterprife.

During a general affault, the town was fet on fire, and in a great mealure confumed. The inhabitants having experienced the evils of a fiege, and dreading the worfe evils of a florm, implored the earl of March and Sir William Keith to feek terms of capitulation. A truee was obtained ; and it was agreed, that the town and cafle fhould be delivered up on terms fair and honourable, unlefs fuccours arrived before the hour of vefpers on the 1gth July.

It was fpecially provided, "that Berwick floould be held as relieved, in cafe 200 men at arms, in a body, thould force their paffage into the town."

By the treaty, Sir William Keith was permitted to have an interview with the regent. He found him

13,500 of \(t\)
to 14,655 :
With him Knyghton appears to concur, when his narrative is cleared from the erions of ignomat or carelefs tranfcibers.

It is probable, however, that the fervants who tended the hories of perions of diltinction, and of the men at alms, and the ufelefs followers of the canp, were more numerous than the actual combatants.

The Erglifh were advantagenully pofted on a rifing ground at Halydon, with a marthy hollow in their front. Of their particular difpuftion we are not informed, further than that Baliol had the command of one of the wings.

It had been provided by the treaty of capitulation, "That Berwick flould be confidered as relieved, in cafe 200 men at arms forced their paflage into the town." This the scottifh men at arms attempted; but Edward, aware of their purpofe, oppofed them in perfon, and repulfed them with great flaughter. The Scottilh army uulhed on to a general attack; but they had to defcend into the marlhy hollow before mounting the eminences of Halydun. After having ftruggled with the difficulties of the ground, and atter having been incelfantly galled by the Englifh archers, they reached the enemy. Although fatigued and difordered in their ranks, they fought as it became men who had conquered under the banners of Robert Biuce. The Englifh, with equal valour, had great advantages of fituation, and were better difciplined than their antagonifts. The earl of Rofs led the referve to attack in flank that wing where Baliol commanded; but he was repulfed and 1lain. There fell with him Kemneth earl of Sutherland, and Murdoch earl of Menteith.

In the other parts of the field, the events were equal- The \({ }^{217}\) ly difafterous. The regent received a mortal wound, The Scote and the Scots everywhere gave way. In the field, and and the during a purfuit for many miles, the number of flain regent and prifoners was fo great, that few of the Scottilh billed. army efcaped.

Befides the earls of Rofs, Sutherland, and Menteith, there were among the flain Malcolm earl of Lenox, an aged baron; he had been one of the foremolt to repair to the ftandard of Robert Bruce, and his laft exertions were for his country; Alexander Bruce earl of Carrick, who atoned for the fhort defection from the family of his benefactor ; John Campbell earl of Athole, nephew of the late king ; James Frafer, and Sinon Frafer ; John de Graham, Alexander de Lindefay, Alan Stewart, and many other perfons of eminent rank.

The fleward had two uneles, John and James. John was killed, and James mortally wounded and made prifoner (1).

The regent, mortally wounded, and abandoned on the field of battle, only lived to fee his army difcomfited and himfelf a prifoner.

This vifory was obtained with very inconfiderable lofs
(I) Forlun, 1. xiii. c. 28, relates, that Sir James Stewart was flain; the Englifh hiftorians, that he was mortally wounded and mave prifoner. It may be renarked, that at Halydon, two Stewarts fought under the banner of their chiefs; the one Alan of Dreghorn, the paternal anceftor of Charles I. and the other James of Rofyth, the paternal anceftor of Oliver Cionwell.

Scotlanil. lofs. It is related by the Englifh bitorians, that, on the fide of their countrymen, there were killed one knight, one efquire, and 12 foot-fildiers. Nor will this appear altugether incredible, when we remember, that the Englith ranks remained unbroken, and that their archers, it a fecure dillance, inceniantly annoyed the Scuttifh infantry.

Thus was the whole of Scolland reduced under the fuljection of Baliol, excepting a few fortreffefs; fo that it became necellary to provide for the fafety of the young king and queen. Accordingly, they were conveyed to France, where they were honourably entertained. Meanwhile, Bahol employed himelf in making new concellions to his liege-lord Edward; and in \(133+\) the work of fubmiffion was completed ly a folema infrument drawn up by Baliol, in which he furrendered gieat part of the Scotifh dominions, to be furever annexed to the crown of England. In this inftru-

Batiol fail, that "he had formerly becone bound to make a grant to Edward of lands on the marches, to the amount of trvo thoufand-pound lands; that the Scottifh parliament had ratified his obligation; and that he had accordingly furrendered Berwick and its territory; and now, for completely difcharging his obligation, he made an abfolute furrender to the Englifh crown of the forelts of Jedburgh, Selkirk, and Ettrick; of the counties of Roxburgh, Peebles, and Dumfries; together with the county of Edinburgh, and the confiabularies of Linhtithgow and Haddington." This extroodinary furrender was made with fo much precipitation, that Baliol forgot to except his own private eltate ont (f) it. This, however, was generonfly reftored to him by Edward; who proclaimed, that, "having already received fatisfaction in full, he had too much reverence for God, juftice, and good faith to man, to allow the ceffion to be prejudicial to the private rights of the king of Scots.". At the fame time Baliol prefented limfelf before his liege-lord; did homage, and fwore fealty, "for the whule kingdom of Scotland and the itles adjacent."
220

A quarrel now arofe among the difinherited lords, to whont this revolution had been owing, which produced the worit confequences to the intereff of Baliol. 'I'he brother of Alexander de Moubray died, leaving daughters, but no iffue-male. Moulray having claimed a preference to the daughters of his brother, Baliol countenanced his fuit, and, as it appears, put him in poffetion of the itheritance. Henry de Beaumont earl of Buchan, and Divid de Strathbolgie or Haltings, eatl of Athol, efpouted the caufe of the heirs-general ; but perceiving that their folicitations were not heard, they left the court in difgult, and retired to their cafties about the end of Augult 1334. Waliol foon perceived his error in ofiending thele two powerful lords; and in order to regain their favour, dimififed Moubray, and conferted on David de Strathbolgie the whole ellates of the young fleward of Scotland. Thus he alienated the affections of Noubray, and added to the puwer af the earl of Aithel, who was by far ton powertul before.
frbut th:s time Sir Andew Murray of Bothwill, Vul. XYI.
laving regained his freedom, legan in aficmble the friet.ds of libetty, and was unanimesully joised by Mull.

Scotan: boy. In a monoent every thing was in confulion, Bation's Gefliay de Mubray, governer of Rosburgh, revoled; party every Henry de Beaunont was befieged in his cafte of Dundarg by Murray and Moubray, and forced of furcn. whele deder, but obtained liberty to depart into Englard. Richard Talbot, cndeavouring to pais into lingland with a body of troops, was defeated and taken prifoner by Sir William lieth of Gallton. T\%e Reward of Scotland, who had lain concealed in the ille of Bute ever fince the battle of Halidon, now paffed over to the caftle of Dunbarton, which was one of the few forts remaining to king David. With the affifance of Dougal Camplell of Lochow, he made bimfelf maker of the caftle of Dunoon in Cowal. His tenants of the ifte of Bute attacked and flew Alda de Lile the governor, and prefented his head to their mafter. John the fon of Gilbert, governor of the cattle of Bute, was made prifuncr in the action. He ordered the garrifon to furrender, and attached bimfelf to the Scottifh interef. Encouraged by thefe fuccefies, the fteward entered his ancient inheritance of Renfrew, and compelled the in. habitants to acknowledge the fovereignty of David. Godfrey de Rofs, the governor of Aymhire, fubmitted to the Steward. The earl of Moray returned from France, whither he had fled after the battle of Halidon, and was acknowledged reyent along with th: fteward. The earl, having raifed a body of tronss, marched againt the earl of Athol, compelled him to retire into Lochaber, and at laft to fu:render; after which he enbraced the party of the conquerors. 13aliol was now obliged to retire again into England, in order to folicit alfiftance from Ldward; and this was readily granted. Edward bimfelf took the field at a very unfavourable feafon for military enterpifes. His army was divided into two parts. With the one Ed ward walted Lothian, while Baliol did the like in Anandale with the other ; and, in the mean time, Patrick earl of March, notwithftanding the unfarourable pofture of affairs, renounced the allegiance he had farom \(n\) England. His motive for this was, that though the kings of England had maintainsd him in an independency dangerous to Scotland, he was alfured that they wonld never permit him to beconie fermidable in a country which they themfelves polleffed.

The year 13.5 is remarkable for the fiege of Lochleven caftle by the Englifn, under Juhn de Strivelin. This fort was built on a imall illand, and very dificu! ot accef: The Englifh commander ereited a fort in the cemetcry of Kinrofs; and at the lower end of the lake, from whence runs the fream called the liater of Lev, h, lee raifed a Arong and lofty bulwari, by means of which he hoped to lay the inland under water, and oblige the garmfin to furrerder. But four of the Scotch foldiers, having found means to approach the bulwark undifiovered, pierced it io dexterounty, that the waters, rulhing out with a prodigions force, over. flowed part of the Englith camp; and the garrion, fallying out during the confurion occafioned by this unexpeeted inundation, formed an 1 plindered the fort at Kinrofs. At this time the Lnollh corrm.inder, with many of his folders, happencd to be alsent at 1)unfermline, celebrating the fettival of St. Lirgaret. On his re:ars, he fivere that he would never deffit till 51

\section*{SCO}

Scotlons. he had taken the place, and put the garrifon to the fword; however, his utmof efforts were at laft baffled, and he was obliged, notwithtanding his oath, to defift.

In the mean time, the regents affembled a parliament a: Dair!y, near Cupar in Fife; but no plan of defence could be fallen upon, by reafon of the animofities and factions which prevailed among the barons. Through the mediation of the French, fume terms of peace were propofed; but being rejected by the Englith, Edward again invaded Scotland, cruelly ravaging the country with one army, while Baliol and the earl Count Guy this invafion, count Guy of Namur landed at Berwick of Namur with a confiderable number of men-at-arms in the ferdefeat:d \(\begin{aligned} & \text { and } \\ & \text { ance of the Englifh. He advanced to the neighbour- }\end{aligned}\) and raken houd of Edinburgh; but was defeated and taken priprifoncr.

225 foner by the carls of March and Moray, and Sir Alexander Ramfay. In this engagement, one Richard Shi: w, a Scottith efquire, was fingled out by a combatant in the army of count Guy, and both pierced each other with their fpears; the flranger being flripped, was difcovered to be a woman. The earl of Moray treated Guy with the greateft refpect, not only allowing him and the remainder of his troops to depart from Scotland without moleltation, but even attending him to the borders, accompanied by William Douglas and his brother James. On his return, William de Preffer, warden of the caftle and forelt of Jedburgh, attacked and defeated his party; James Douglas was killed, the earl himfelf taken prifoner, and carricd into England.

Thus was the Scottifh nation once more reduced to the brink of ruin. Alexander de Mowbray, Geffrey de Mowbray, and fome others, pretending powers from "the earl of Athol and Robert the Steward of Scotland," concluded a treaty with Edward at Perth; the fubfance of which was, that all the Scots thould receive pardon, and have their fees, lands, and offices re- ftored, excepting thofe who by common affent in parliament fhould be excluded. The liberties of the church and the ancient laws and ufages of Scotland were to icmain in full force. All offices were to be filled with Scotfmen, excepting that the king fhould appoint whom
226 he pleafed within his regalities.
The carl of The earl of Athol now began to perfecute with the Athol de- netmoft fury thofe who wifhed well to the caufe of Scot-
land. With 3000 men he befieged the caltle of Kildrommey, which had hitherto been the great refuge of king David's party. Sir Andrew Murray of Bothweli refolved at all events to attempt the refcuc of his wife and family, who were fhut up in this cafle. With 1100 men he furprifed Athol in the foreft of Kilblain. 'The earl's men, feized with a panic, fled and difperfed themfelves; on which their commander, refufing to accept of quarter, was killed. Sir Andrew Murray then aftembled a parliament at Dunfermline, where he was 227 immediately appointed regent.

In 1336, the king of England perceiving that the Scots were taken under the patronage of France, refulved to invade their country, and crufh them at once before they could have any alliftance from their new allies. In this expedition he penetrated as far as Invernefs; but the Scots, commanded by Sir Andrew Murray, avoided coming to a gencral action; fo that Edward could not effect any thing of confequence.

The inhabitants of Aberdeen attacked one Thomas Rofheme, who had landed at Dunottar. They were defeated; but Rofheme fell in the action. Edward chaftifed the vanquifhed feverely for their temerity, and laid the town in afhes. He then began to repair the cafles whofe fortifications had been demolifhed by king Robert. He put in a ftate of defence the caftles of Dunottar, Kinclevin, Lawriefon, Stirling, Bothwell, Edinburgh, and Roxburgh ; greatly augmented the fortifications of Perth, and left a confiderable body of troops in the place. The Scots began to reduce thefe caftles as foon as Edward was departed; and in 1337, under Sir Andrew Murray, invaded Cumberland. No great exploits, however, were now performed on either fide. Edward being employed in preparations for invading France, had little leifure to attend to the affairs of Scotland; and the Scots, divided among themfelves, and deftitute of thofe leaders under whom they liad acquired fo much glory, could not now annoy their enemies as formerly. The moft remarkable tranfaction was the fiege of the caftle of Dunbar, belonging to the cafle earl of March. The Englifh commander was the earl of Salifbury. The earl of March was abfent; but his wife, the daughter of Randolph, from her complexion commonly called Black Agnes, undertook to defend it in her hufand's abfence. The Englifh again employed that huge machine called a forw, formerly mentioned in our account of the fiege of Berwick: it met with the fame fate now as at that time; an huge flone, let fall upon it from the top of the walls, crufhed it to pieces. The Englifh, bafled in every attack, turned the fiege into a blockade; but Sir Alexander Ramay having found means to enter it with 40 refolute men, the garrifon made a fally, and cut in pieces the advanced guard of the enemy. The Englifh, difheartened by fo many misfortunes, abandoned the enterprife.

In 1338, Sir Andrew Murray the regent died, and was fucceeded in his office by Robert the Steward of Scotland. In 1339 he reduced the town of Perth and the cafle of Stirling; and gained over to the Scottifh intereft William Bullock, governor of the cafte of Coupar : after which, having expelled the enemy from every poft to the northward of the Forth, he employed himfelf in fettling the affairs of the nation as well as he could.

In 1341, the caftle of Edinburgh was furprifed by a device of Sir William Bullock. According to his ap. pointment, one Walter Currie of Dundee privately received into his fhip the knight of Liddefdale, with William Frafer, Joachim of Kinbuck, and 250 refolute men. Currie caft anchor in Leith road, pretending to be an Englifh Chipmafter, who had a cargo of wine and provifions, with which he propofed to furnifh the commander of the cafle. His barrels and hampers were brought to the caftle gate, and fuddenly thrown down in fuch a manner as to obfruct the fhutting of it. Currie and his men then flew the centinels; and the knight of Liddefdale, with a party who lurked in the neighbourhood, rufhed in, overpowered the garrifon, and made themfelves mafters of the place.-On the 4 th of March this year, the king and queen arrived from France, and landed at Inverbervie in Kincardinefhire.

In 1342, Sir Alexander Ramfay took the Arong fortrefs of Roxburgh ; for which important fervice the king beftowed on him the charge of theriff of Teviotdale, it

Miferable cod of
Alexander Ramfay and Sir William Buliock.
that time held by William Douglas kright of Liddefdale. The king's liberality proved fatal to Ramfay: for from that time Douglas became his implacable and inveterate enemy; and having, after a pretended reconcilation, unexpectedly furprifed him with three of his friends, he put them inltantly to death, carrying off Ramfay himfelf to his cafle of the Hermitage, where he cauled him to be ftarved to death in a molt barba. rous manner. The unhappy man was confined in a room, over which was an heap of wheat; a few grains of which were let fall every day through a hole, not as many as would fupport life, but as wuuld protract it for a time, and make him longer fenfible of the agonies of hunger; and in this miferable fituation he fiurvived 17 days. About the fame time Sir William Bullock was put to death by Douglas in a fimilar manner ; nor was King David at that time in a capacity to punifh fuch atrocious cruelties committed by fo powerful a fubject.

In the mean time, David having raifed a powerful David invades England, and behaves with the utmoll sruelty. army, prepared to take a fevere revenge of the Englifh, from whom he had fuffered fo much. Edward was at that time in France, but commanded Baliol to raife all the militia beyond the Trent: which order, however, produced but little effect ; fo much was this mean- fpirited prince defpifed by the Englifh. David invaded Northumberland without opporition, and ravaged the country ; but was obliged to raif the fiege of Newcaftle, which was commanded by Sir Juhn Nevil, an ex. cellent officer. David, exalperated at this repulfe, entered the bithopric of Durham, which he ravaged in the moft cruel manner. However, on the approach of Edward with a powerful army, the Scots thought proper to retire ; and a two years truce was agreed upon.

234 Other invalions.

This pacification was but Chort-lived. In 1345 the Scots again prepared to invade England, while Edward took all neceffary meafures fur oppofing them : however, this year the Scots were fucceffful, ravaging Weftmoreland, and burning feveral towns. The year ended with a new truce between the two nations; and hoftilities were not renewed till 1346 , when David entered England with an army of 50,000 men. His firft exploit was the taking of the fortrefs of Liddel, and maflacring all whom he found in it. The commander, Sir Walter Selby, capitulated with a Scots knight for his life; but the bargain being difapproved of by David, he ordered two of Selby's fons to be frangled in his prefence, and then the father's head to be cut off. From therce the Scots marched to Lancroft, which they plundered; then paffing into Northumberland, they pillaged the priory of Hexham, but fpared the town, that it might ferve as a magazine. Three other towns, Corbridge, Durham, and Darlington, were fpared for the fame reafon. In his march to Durham, it is faid that he would have made the county a defert, had not fome of the monks paid him a contribution of a thoufand pounds to fpare their eftates: however, according to Knyghton, every Englihman who fell into David's hands was put to death, unlefs he could redeem bis life by paying three pence.

To put a ftop to the cruelties of this barbarous invader, the queen of England, in her hußbind's abfence, affenbled a powerful army, which was divided into four bodies; the firlt commanded by Lord Henry Percy; the fecond by the archbifhop of York; the
third by the bilhop of Linculn, the lord Moubray, and Scuthond. Sir Thomas Rokeby ; and the fourth and principal divifion was headed by Edward Baliol. - The king of Scotland headed a cliofen battalion, compofed of the flower of his nobility, and the auxiliaries with which he had been fupplicd by lirance. The high feward of Scotland headed the fecond line; and the third w.is commanded by the earls of Moray and Douglac. While the Englifa were approaching, Lord Douglas and S'r David Graham fkirmifhed with them, but wcre defeated with the lofs of 500 of their men; which feemed an omen of the difafter that was about to enfue. The general engagement began between the archers on both fides; but the Englifh being much fuperior in the ufe of the bour, the fteward of Scotland advanced to the relief of his countrymen. The Englifh archers, unable to bear his attack, fell back upon Lord Henry Percy's divifion, which was thus put in confufion, and would have been totally defeated, had not Baliol advanced to their relief with a body of 4000 horfe. The fteward was then obliged to retire; by which means the flan's of that divifion commanded by David, and which was then engaged with another line of the Englih, was left expofed to an attack. Baliol perceived the advantage; and, without puriuing the feward, attacked the king's divifion, which was immediately cut in pieces or difperfed. David was left with about 80 noblemen and gentlemen, but fill maintained the fight with obftinacy; nor would he yield even when wounded in the head and their with an arrow, expecting every moment to be relieved kiag takea by the Iteward and that line of his army which was fill prifunce. entire under the Lords Moray and Douglas. At la a finding himfelf totally overpowered, he attempted to retreat, but was overtaken by a party under one John Copeland. This captain, endeavouring to feize the king, had two of his teeth ftruck out by a blow of his gauntlet; but at laft, finding it in vain to refift, the king was obliged to give up his fford and furrender himfelf a prifoner. - After he was taken, Baliol attacked and totally routed that divifion of the Scottilh army which had hitherto remained entire under the Lords Moray and Douglas. In this battle the Scots loft a great number of their nobility, and 15,000 commons foldiers. Many perfons of the firf diftinction were alfo taken along with the king; and had it not been that the efcape of the Scots was favoured by the avarice of the Englifh foldiers, who neglected the purfuit in order to plunder, fearce a fingle Scotinan would have returned.

King David, after this unfortunate battle, was carried to the caftle of Bamborough, where he was kept with fo much privacy, that for fome time it was nut known where he was, or that he had been taken prifoner. As foon as the truth was known, the queen of England demanded the royal prifoner from Copeland; but the latter politively refufed to part with him even to the queca, unlefs the could prod.:cc an order to tbat purpofe under Edward's hand and feal. This refolute belhaviour was refented by the queen, and a complaint made to the king ; in confequence of which Copeland w.as fummoned to appear beiore Edward, aiter having refigned Duvid to the cultody of Lord Neril. The Englith monarch, at that time in Franee, approved of all that he had done, rewarded him with 500 1. a year, and icnt him back to England with the honour of \(5 \mathrm{E}_{2}\) knight-

Rn'ghthocu. Divid was then efeorted by Copeland, a:tended, it is fal\}, by 20,000 men, from the caltle of Ogle in Nerthumberland, till the Lord Nevil, by indenture, delivered him into the hands of Sir Thomas Rokeby, fleriff of Yorkfhire. In the fame pompous manner lie was conducted all the way to I ondon, which he entered on a black courfer. He was received in the capital with the greatelt folemnity by the lord mayor and other magiftrates, the city-companies under arms lining all the freets through which he pafied, the loufes loaded with fpectotors, who expreffed a generous roncern for his riptivity. Being arrived at the Tower, he was delivered, by indenture likewife, to the cuftody of the conftable, the Lord John Darcy, on the 2 d of ther attempton the crown of Scotland. January 1347.
Baliol now, encouraged by the misfortune of his rival, made an effort once more to eftablifh himfelf on the throne of Scotland; and before the end of the year reduced the cafles of Hermitage and Roxburgh, the forelt of Ettric, the Merfe, with the counties of Annandale, Teviondale, and Tweeddale. The Scots continued faithtul to the caufe of their king, notwithftanding his misfortune, and chofe the Steward for the guardian of the kingdom. He behaved with a prudence equal to the high fation he filled: neverthelefs the progrefs of Ealiol was fo rapid, that it is fcarcely probable he could have maintained his ground, had not Edward again confented to a truce; which, however, feems to have been ill obferved on the part of the Scots. In faat, though

241 both Scots and Englifh hitorians are filent as to particulars, we find, that about the end of the year \(134^{8}\), all Scotland was recovered out of the harids of the Englith ; excepting Berwick, Roxburgh, Hermitage, and Lanric, which was part of Baliol's hereditary eftate, and defended by him with an army. The Scots hiftorians infornu us, that the Englifh, in revenge for the damages done to their country by the breach of the peace, proclaimed a tournament and other military exercifes at Berwick, to which they invited the Scots; but in their waly thither the latter fell into an ambufcade, and were all cut in pieces.

The years 1349 and 1350 were remarkable only for a dieadtul plague which invaded Scotland, after having ravaged the continent of Europe. According to Fordun, one-hird of the people of Scotland perifhed at this time. The patient's flefh fwelled exceedingly, and he died in two days illnefs; but the mortality chiefly affeted the middling and lower ranks of people. The fame dreadful calamity continued throughout the years 1351 and 1352; occalioning a ceflation of arms not only in Scotland, but throughout all Europe.

All this time king David remained a prifoner in England; for though feveral treaties had been propofed, they bad hitherto come to nothing, becaufe the Englith monarch infifted upon being indemnified for the ravages the Scots had committed in his territories. At latt it was agreed, that the king of Scotland fhould be immediately fet at liberts, on paying 90,000 merks for his ranfom, by equal proportions, within the fpace of nine years: That ic,000 merks, bcing the firft proportion, fhould be paid at the feall of Candlemas next to come, the fecond at Candlemas 1357, and fo on till complete payment fhould be made of the whole: That, during the faid fpace of nine years, there thould be a truce between the two kingdoms: That 20 Scots gentlemen,
of the bef families in the kingdom, frould remain in England as hoftages and fureties for the faid fum ; and that, if any fart thereof was not paid at the precife time appointed, then David Thould remain a prifoner in England till it was paid; or, if he was detained by any jult caufe, that the lord high lleward, the lord Donglas, John of the Ifles, and others of the higheft rank, fhould come and fupply his place.

Thefe terms were rejected by the Scots nobility, and,
in 1355, war was recommenced with England, at the inftigation of France, who fent 40,000 crowns to Scotland as a fupply for defraying the expences.

With this fum the guardian, having raifed an army, once more took the field; but not before the Englifh had deftroyed the Lothians and Douglafdale. A battle was fought on Nefbit-moor: in which the Englith being drawn into an ambufcade, were totally defeated. The next attempt of the Scots was againt the town of Berwick, which they defigned to furprife by an efea- Berwick lade. They met, however, with fuch a vigorous refift- taken by ance, that many perfons of diftinction were killed. the Scots. However, the attack proved fuccefsful; but the acquifition was of no great importance as the caftle ftill held out. Edward, in the mean time, hearing of the lofs of the town, hurried back from France to London. Here he ftaid but three days, and marched northward to raife the fiege. He reached Durham on the 23 d of December 1355, where he appointed all his military tenants to meet him on the ift of January 1356. On the 14th Retaken of the fame month he arrived before Berwick, which hyedward. was inftantly retaken ; but the Scots were allowed to depart for their own country. The reduction of this place produced an extraordinary effect : for Baliol now perceiving that Edward meant not to eftablifh him on the throne of Scotland, but to retain in his own polfecfion as many places of that country as he could, came at lalt to, the refolution of giving up to the king of England the whole of Scotland. This indeed was no more than a form, becaufe at that time he was not poffeffed of the kingdom. However, the ceremony was performed at Roxburgh; and Baliol prefented his crown \(f\) and fome earth and fones by way of inveftiture. Bdliol in return was to have a revenue of 2000 pounds ayear ; and as Edward was at the head of an excellent army, he had little doubt of being able to force the Scots to fubmit.

The affairs of Scotland were now in a very critical fituation; and it was neceffary to gain time. For this reafon Edward was amufed with a negociation; and to this he the more willingly liftened, as he was at that time waiting for his fleet, from which he had great expectations. A little time, however, difcovered the deceit. The Sots plainly told Edward, that they would die rather than fubmit to his demands; and lie, in return threatened a moft dreadful revenge. His fleet in the mean time arrived in the Frith of Forth; the mariners deftroyed and pillaged all that was trithin their reach, without faring even the facred edifices, carrying off the ftatues of the bleffed virgin, loading the monks with chains, and committing every thing in thofe days called impiety and facrilege. Edward had ly this time marched as far as Haddington, but was obliged to receive provifions all the way from his fleet; for the Scots had defolated the country through which he paffed. During his march his army was haraffed, and

246

\section*{But is obli.} ged to return with. cout accomplifhingany thing.
and at lalt his fleet being tot tlly deftroyed by a llorm, he uas obliged to return to England without accomplithing any thing.

In the mean time the prince of Walec, who had been left by his father to carry on the war in Fratace, defeated and tork prifoner John king of France, at the batt'e of Poictiers. In this battic were \(30-0\) Scots, who had geusenver as auxiliaries to the French monatch, and who fuffered extremely. However, the fuccefs of Edward, intlead of rendering him hangh:y, fomed to have a contrary effect ; and, by the mediation of Pope Innocent, a rruce for two years was conchuded with France, in which the Sents were comprehended. During this interval the ranfom of the king of Scots was fettled at 100,000 merks, to be paid in ten years; for which 20 holtages were to be given as iormerly. In confequence of this treaty, Divid at laft obtained his liberty in 1358 ; and Edward laid afide all bupes of ever fubduing Scotland. As fur Baliol, he was now funk in oblivion; and it is not known what became of him, or when he died.

Ddvid, though now reftored to liberty, found himfelf greatly embarraffed with the payment of fuch a large fum as had been tipulated for his ranfom; the kingdom of Scotland being then in a moft miferable and exhauft. ed fituation. After fending his queen, and going into Englınd himfe'f, he could obtain no greater favour than a refpite of a few months for the payment ot the fecond moiety ; fo that he was a lalt conilrained to afk alliftance from France. This could fcarcely be expected it. the dillrelfed fituation of that kingdom; however, it

773 ]
S C. O
was it laft agreed, that 50,000 marks fiould be paid Scotland. to sicctland, in cafe the scots would confent to renew the war the folluwing year. Neither party, however, kept thair word; and David, being ftill greatly diltrelfcd about the remainder of his ranfom, at latt entered into a vesy extraorumary negociation with Edward, by which he confented that the king of England hould be his fuccetfor to the throne of Scotland. But this nerociation was defeated through the invincible hatred wheh the Scots bore to an Englith governor. David then, being entireiy unable to difcharge the remainder of his raniom, was noliged to enter into at new treaty ; by which the hingdom of Scotland became indebted to Edward the furn if 100,000 founds Aterling, to be paid by cquall proportions within the face of 25 years, during which theic thould be a truce between the two nations.

From this time we meet with little more of any moment in the reign of king David. After the death of his queen Johamna, the fifter of Edward, he married a Scots woman, of man birth, named Margarer Logie; but by neither of his wives had be any children. Queen Margaret he divorced, on what pretence is not known; however, fhe left the kingdom, and complained perfinally to the P ,pe, who treated her as Divid's lawful wife, and enjoined her huthand to receive her as fuch under the moft fevere penalties. What effect thefe threats bad on the king is not known; but it is certain that Margaret never returned to Scotland; and, on the 22 d of February 1371, David himfelf died, lea ving the kingdom to his nephew Robert Stewart, the firf of that \(f_{d}\) mily who fit on the throne of Scotland (k)
(к) Concerning the origin of tha Stewart family, we bave the following account by the Scots hiftorians. Fleance, the fon rif the celebrated Banquo, after his father's murder by Macbeth, fled intn Wales, where he had a fon named Waler, by a pincefs of that country. After the reftoration of Malcolm Canmore, this Walter returned to Scoland, where he was promoted to the high flewardflip, a dignity held by fervice, and which intitled the poffelfor to all the privileges of a barnn. Walter was now diftinguihed, from this office, by the title of H'a'ter the Stewart, which difeended to his polterity; and Steward, afterwards Stewart, or Stuart, became their furname.

On this fubjeft Lord Hailes has the following remark: "Our hiforians have recorded the achievements of Walter the Steward of Scotland in the reign of Malcolm III. He is faid to have been the father of Alan, and the grandfather of that Walter who was indeed Stewart of Scotland in the reign of David I. and Malcolm IV. It may perhaps be afcribed to frange prejudices, or to a fpirit of feepticifm, when I declare, that hitherto I have feen no evidence that fuch a perfon as Walter Stewart of Scotland, in the reign of Malcolm III. did ever exitt.
"We are gravely told, "That Walter the fon of Fleance, the fon of Dinqun, Thane of Lochaber, having killed a man at the court of Grifith, prince of Wales, fought refuge with Edward the Confeffor ; and having killed another man at Edward's court, fought refuge with Alan the Red, earl of Brittany: That, on the Norman invation, hecame to England with the earl of Brittany, and figualized himfelf at the battle of Hatings in 1066 : 'That the earl of Brttany, by his firt wife Emma, daughter of Siward earl of Northumberland, had an only child Chritinat ; and thit he be:towed her in marriage on the young hero." This is the ftory which, after various improvements fince the days of \(B o s c e\), has had the gond fortune 10 obtain credit.
"That Walter, before he had well dttained to the age of manhood, thould have flain two men in private quarrels, is a circumftance improbable, yet polible; and therefore I object nut to it. But his alliance with the earl of \(B\)-ittany cannot be fo cafily admiued.
"Alan, furnamed l: Roux, a younger fin of Eisdn earl of Brittany, was one of the allant adventurers who came over with Willium the Conqueror; he bad neither territuries nor court. The hiforians of Brittany politively affert that he had no cliiklren. Betides, it is hard to iay by what accident Alan le Roux: fhould have become acquaintel with Enima the daughter of Siward earl of Northumberland! I fuppofe that our hiftorians invented this alliance, in order to flrengthen the connetion between Walter the Stewart and Malcolm III.

Scotland. Some authors tell us, that at the acceffion of Robert I1. his title was difputed by William earl of Douglas. If any fuch claim was preferred, an aifembly of the States fet it afide, and it was relolved that Robert flould be crowned at Scone; and to take away for the future all difputes concerning the fucceffion, a particular act was framed, by which the kingdom was fecured to Robest and his heirs.

The new king being thus eftablifhed on the throne, endeavoured to renew the war with the Englith, in order to recover from them the town of Berwick, and fome other places on the borders. In this, however,
fore, was entered into, by which it was provided, Scotland. that neither Scotlard nor France fhould be obliged to make war with England; and by another clauie, that the difpenfation or authority even of the pope himfelf thould never free the kings or kingdoms of France and Scotland from the obligations they lay under to affitt one anothcr, as often as required, in oppofition to the kingdom of England. In cafe of a competition for the crown of Sc tland, the king of France and his heirs were to take care that no Englifh influence was ufed; but that the matter being by the greatef and beft part of the nation decided conformably to the laws and eftablifhments of Scotland, he thould with all his power defend and affift the perfin fo eftablifhed. Laft. ly, it was agreed that no Frenchman fhould ever hencetorth ferve for wages, or otherwife, againft Scotland, nor any Scotiman-againt France.

This laft article nccafloned a recal of all the Scots War befrom the Englifh armies, which Edward Icoked upon twixt the to be a prelude to an invafion. He accordingly iffued Scots and writs for affembling all the militia in the north of Eng. Englifh land. At this time an invincible hatred fubfifted be- borderers. tween the neighbouring people of both nations, which extended
"According to one account, the genealogies of their families fand thus: Siward earl of Northumberland *.

1
$\frac{\text { Emma=Alan earl of Brittany. }}{\text { Chriftina }=\text { Walter the Stewart. }} \frac{\text { Another daughter = Duncan king of Scots. }}{\text { Malcolm III. }}$
"Thus Walter the Stewart and Malcolm III. were coufins-german.
"According to ancther account, the genealogy of their families ftands thus:
$\frac{\text { Siward Earl of Nurthumberland. }}{\text { Emma=Alan Earl of Brittany. }}$

Chrutina=Walter the Stewart.
"Thus the mother of Walter the ittewart and Malcolm III. were coufins-german.
"It is faid that, "Walter the Stewart had a fon, Alan, alfo Stewart of Scotland.' The evidence of this is to be found in a charter granted by Earl Gofpatrick, and in another charter granted by his fon Waldeve Earl of March, at Dunbar. In them Alden, or Aldan Dapifer, is mentioned as a witnefs; that is, fay our antiquaries, Allan, the Stewart of Scotland.
"This is the fundamental propofition on which the genealogy of the houfe of Stuart, as it is commonly undertood, may be faid to reft. It will be remarked, that this hypothefis takes it for granted, that Alden or Aldan, and Alan, are the fame; upon what authority I know not. The Alden mentioned in the two charters feems to have been the flewart of Earl Gofpatrick, and of Earl Waldeve, not the flewart of Scotland.

To the charter by Earl Gofpatrick, there are eight witneffes: ' Andrew the arch-deacon, ; Adam his brother; Nigel the chaplain; Ketel the fon of Dolphin; Ernald; Alden the Sterwart (Dapifer) ; Adam the fon of Alden ; Adam the fon (f Gofpatrick.' Is it poffible tor credulity itfelf to believe, that the Alden placed fo low in fuch company, was the bigh jlezuart of Scotiand, a man at leaft as honourable as Gofpatrick himielf? I can have no doubt, that the witnelles to this charter were the dependents or honfehold-fervants of Earl Gofpatrick; and that if we interpret Nigellus Capellanus to be Nigel the earl's chaplain, we mult interpret Aldenus Dapifer to be Alden the carl's fiewart.
" To the charter granted by Earl Waldeve, there are nine witneffes. Alden Dapifer is the feventh in order. There are only three among them who feem to have been landed men: 'Elias de Hadeftandena (probably Haffenden),

## Scotland. <br> $\underbrace{8}$

extended not only through the lower ranks, but had pervaded the higher claffes alfo. The inhabitants of the borders, indeed, paid very little regard to the orders of their refpective fovereigns; fo that daily hoftilities were committed by them upon each other when there was peace between the fovereigns. The inhabitants of thefe countries had eftablifhed with one another certain conventions, which have fince been collected, and go by the name of the Border-laws. The families of Doug. las and Piercy, whofe eftates lay contiguous to one another, were at perpetual variance. It had been com. mon for the borderers of both kingdoms, during a truce, to frequent each others tairs; and a fervant of the earl of March laad been killed in a fray at that of Roxburgh, which was Rill in the hands of the Englifh. Juftice for this murder was demanded from lord Percy; but he flighted the complaint. On this the earl of March, with his brother the earl of Moray, affembling their followers, entered the next fair that was held in Roxburgh, plundered and burnt the town, and killed all the Englifh who fell into their hands. The Englith borderers were ordered to lay watte the lands of the earl of March; but, in their way thither, defroyed the
cftate of Sir John Gordon, a man of great property in Scneland, the fouth of Scotland. Sir John in his turn invaded England, from whence lie drove off a large booty in catte, and a number of prifoners. In his retreat he was attacked by a body of frefh troops under Sir John Lifburn, at a place called Caran. An obttinate encounter followed. The Scots were five times repulfed ; but at laft they tenewed the cl:arge with fuch fury, that they made Lifburn, his brother, and feveral other perfons of diftinction, prifoners, together with all their furviving foldiers. On this Lord Percy with 7000 men encamped at Duns, in the fouth of Scotland; but was obliged to resire, probably for want of fubfiftence for his army. In the mean time, Mufgrave, the governor of Berwick, who had heen ordered to join Percy with a detachment from the garrifon, was on his march in. tercepted, defeated, and taken prifoner by Sir John Gordon; after which the berder war became general on both fides. The iflue of thefe difurbances is but little known; however, in 1377, we find them raging with more violence than ever. The fair of Roxburgh was once more the frene of action, and the town was again burnt down by the Scots. Lord Percy, who was now

Haffenden), William de Copland, and William de Hellebat (q. Elbottle) ; all the three are placed before Alden Dapifer.
"It has been remarked, 'That in thofe days the title of Alewart or dapifer was too high a title to be given to the retainer of an earl.' I anfwer, that the Saxon Chronicle, anno 1093, fays, 'Morael of Boebbahurh was thaes eorles firvard,' i. e. M rel of Bamborough was this earl's flewart, or the Atewart of Robert earl of Northumberland. Befides, to a charter granted by Earl Gofpatrick the Elder, Lambertus Dapifer is a witnefs. If Lambertus Dipifer, in a charter of Goipatrick the Lilder, implies Lambert the Rewart of the family of March, why fhuuld Aldenus Dasifer, in the charters of the fon and grandion of Gofpatrick, imply the flewart of Scot'and?
" 1 believe that no defender of the common hypothefis will anfwer this objection, by pretending that Lamberfus Dapifer was indeed flezuart of Scothand. Such an anfwer would leave no room for Walter ftewart of Scotland, who is held to have been a dititinguifhed perfonage in the reign of Malcolm III.
"It is curious to fee upon what flight grounds our antiquaries have eftablihed the connection between Aldenus Dapifer and the houfe of Stewart. Walterus flius Alani appears to have flourifhed in the reign of David I. In the reign of Malcolm IV. he is termed Dapifer. Hence it has been rafhly concluded, that Walterus Dapifer filius Aluni was the fon of that Allenus Dapifer who is a witnefs to the charters of Gofpatrick and Waldeve.
"I perfuade myfelf, that Alden Dapifer, and Alen the fasher of Walter newart of Scotland, in the reign of Malcolm IV. were different perfons; and that they had nothing in common but the chriftian name, if indeed they had that in common.
"Some of my readers may demand, "Who then was Alen the father of Walter, Aewart of Scotland in the reign of Malcolm IV.?
"I can only anfwer this queftion by demanding,' Who was the father of Martach Earl of Marre in the reign of Malcolnı I1I.; of Gilchrift Earl of Angus in the reign of Alexander I.; of Fergus Lord of Galloway in the reign of Malcolm IV.; or of Frikinus de Moravia, anceftor of the family of Sutherland, in the reign of Wiiliam the Lion? Or, to keep in the fuppofed line of the royal family of Stewart, 'Who was the father of Banquho Thane of Lochaber :'
"Many anfwers may no duubt be made to this laft queftion. Kennedy fays, that the father of Banquho was one of the feven fons of Core king of Munter; Sir George M•Kenzie, Of Ferquhard, the fon of Kienneth III. ; and Simpfon, The fon of Ferquhard Thune of Lochabar, the fon of Kenneth, the fon of Nurdoch, the fon of Doir, the fon of Eth king of Scotland.
"It is remarkable, that Abercrombie relates all thone contradifory fories, without cver fufpecting the natural inference arifing from them, "That if noble perfons are not latisfied with a long pedigree, proved by authentic inftruments, they muft belicve in flattering and igmorant fictions; and that if they foorn to wait for the dawn of record to enlighten their defcent, they mult bewilder themfelves in dark and fabulous genealogies.'
"In the reign of David 1. before the middle of the t2th century, the family of the Stewarts was opulent and powerful. It may therefore have fabfited for many ages previous to that time; but when, and what was its cunmencerment, we cannot determinc."

Scorland.

255 Berwick taken and rctaken.
earl of Nerthumberland, refolved to take fignal vengeance. He ravaged the Scots borders, particularly the earl of March's eftate, for three day's, at the head of 10,000 men. Some time after this, the Scots infurgents became powerful enough to furprife Berwick; which, however, was quickly retaken by the Englith, who foon atter invaded Scolland. In this expedition, however, they fucceeded fo ill, that Percy thought proper to defift from his expedition. The Scots in the mean time began hoftilities by fea, ander one Mercer, an experienced failor; but he had the misfortune to be taken prifoner by the Englifh, with all his flect. In 1379, England was aflicted with a dreadful plague, of which the Scots took advantage to invade the country. The Englifh hittorians tell us that they behaved with the utmoit barbarity, killing and plundering the defencelefs inhabitants without mercy.
'Ihis predatory war continued, generally to the difadvantage of the Englifh, till the begiming of November 1380 , when a truce was concluded, to continue for a year ; which, however, related only to the borders. This truce, like the others, was but very indifferently obferved; fo that, in 1383 , new negociations were fet on toot : but, in 1384 , the war was renewed with greater fury than ever. In the fring, the earls of March and Douglas took the caftle of Lorhmaben, and intercepted a rich convoy which the Englifh were fending to Rosburgh ; burnt to the ground the cattle of Wark, and committed fuch devaltations in the noth of England, that feveral gentlemen offered to refign their eftates to king Richard, becaufe they were not able to defend them againit the Scots. The duke of Lancalter entered Scotland at the bead of an army; but the inhabitants had removed every thing valuable, fo that he marched on to Edinburgh without accomplifhing any thing of confequence. On his return he was haralled by flying parties of Scots, who defroyed a confiderable number of his men. This jear alfo the French fent a body of auxiliaries into Scotland. The earls of Northumberland and Nottingham entered Scotland with an army of 10,000 horfe and 6000 archers; but retired, after having committed fome devaftations in the fouthern counties. The Scots revenged themfelves by laying walte all the northern part of England to the gates of Newcaftle. Berwick was taken by the Scots, and foon after furrendered for the fum of 2000 marks. A truce was then, as ufinal, concluded ; but in the mean time hing Robert was meditating a molt fevere blow againlt the Englith.
ders, claimed the fovereignty of the town of Ghent ; but they refufed to fubnit to him, and in this refufal were protected by king Richard II. of England. On this the duke of Burgundy propofed to the Fiench court to invade England in concert with the Scots.This being agreed to, a fleet was fitted out at Sluya: on board of which J hu de Vienne, the French admiral, embarked, carrying along with him 50,000 pounds in gold, which the duke of Burgundy advanced in order to be difributed in Scotland, where the admiral anived fafe with a confiderable reinforcement, together with fupplies of all kinds of military flures. Two thoufand auxiliaries, of whom 500 wale menat-arms, arrived with this fleet; and 400 fuits of complete ar-
mour were brought along with theni, in older to be Sentand. diltributed among the bravelt of the Scots.

The Scots were tor a thort time elated with the great But comes attention which had been paid them by the French to nothing. king; but, in the mean time, the Flemings laving revolted, the Frencl abandoned the Scots to fuftain the whole weight of the Englifh refentment, that they themfelves might employ their arms in Flanders. IKing Richard took the field with a more numerous army than had ever been muftered in England before. Hoftilities were begun by the Scots, whi, according to cutom, invaded the northern parts of England, and carried of a confiderable booty: however, in their retreat, they were in the utmult danger of being cut off by the duke of Lancafter, who had been fent with an anmy to intercept them. The Englifh army proceeded northwards; but could accomplifh nothing, on account of the country being defolated, till they came in Edinburgh, which they laid in afhes. Being, however, incefliantly harafsed by parties of the enerny, they were obliged to retheat.

Nothing remarkable happened till the year 1387, when, after a fhort truce, the war was renewed with frefh fury. Northumberland and Weftmoreland were ravaged by the earls of Fife and Douglas, and Lord Nithidale deteated a body ot 3000 Englifh; after which he tormed the plan of invading Ireland, the inhabitants of which had of late betn very actuve againft the Scots. In 1388, Douglas obtained permiffinn to raife a body of forces fur this invalion; and having landed in fafety, defeated the Irifh, plundered the town of Carlingford, and loaded fitteen thips with the booty. From thence the Scots failed to the ille of Man, which in like manner was plundered and laid wafte; after which they returned with their booty to Loch Rian in Scotland.

Encouraged by this fuccels, Robert determined to England proceed on a more enlarged plan. Having affembled a invaded by parliament at Aberdeen, a double invation of England two Scots was refolved upon. T'wo armies were raifed; the one, confifting of 25,000 men, commanded by the earls of Mentieth and Fite, Douglas lord of Galloway, and Alexander Lindfay; the other army, confiling of the like nuinber, was commanded by the earls of Douglas, March, Crawtord, Moray, the Iord high Conitable of Scotland, and other perfons of diftinction. The former enteted Cumberland, and the latter Northumberland, both which countries they laid watte, and both armies were to meet within ten miles of Newcaltle. The Englift were thrown into the greatelt conflernation. Newcaltle was defended by the eanl of Northumbenland, whote age and infirmities rendered him incapable of taking the field; but his place was abundantly fupplied by his two lons Henry and Ralph, the fommer of whom is known in Englifh hiftory by the name of Hotfpur. The town was yarrifined by the fower of the Englifh nobility and gentry, as well as the inhabitants of the adjacent counties, who had fled thither for refuge. Douglas felected 2000 foot and 300 horfemen out of the two armies, and encamped on the north fide of the town, wi ha view, according to the Scots hillorians, of Atorming it next day. In the mean time, he was challenged by Hotfiur to fight him hand to hand, with Singlc con:thanp ground ipears, in fight of both an mies. Douglas bat beaccepted the challenge, and Percy was unhorfed the tween earl firf encounter, and obliged to tale refuge within the and Henry port- l'ercy.

S.at:su'. With d:titulty they prewted, and peace betwen Fingfand and Scatlans was mice $m$ re retlons. Scarce, however, was this unce finithed, when the fuce of the nation was mot fcardaloully volated by Robert's hird fon the eatl of Buchan. Iltis prince having a quarrel with the billwp of Murray, burnt down the fine es. thedral of E1 gin, wh ch has heen called by hiftorians the lanthorn and ornament of the north of Sco:l.nd. The king fur this crime caufed his fon to be imprifoned: and a cisil w.r would have been tare confequence, hard it not been for the veneation which the Sents retanied for their old king. However, they did not long enjoy Robers 17 . their beloved monarch; for he dicd on the $19 \%$ of dice, and April 1390 , in the $i 5 t /$ jear of his age, and the $19 h^{\prime}$ is fisceedol lis reign.

On the death of Rebett II. the crown devolved upon his eldation John; bat the name being thought unlucky in Scotland, he chans: 1 it for that of Robert, thongh he was thill called by the commonalty Robert . Fobn fornzier. He had been married is Ar.nabelia, the daghter if Sit Jolin Drummo id, ancelter to the roble family of Perth; and was crowned along with his confort at Sconc, on the $13^{\text {th }}$ if Augut 1320. He contirmed the truce which had been entered into with Eigland, and renewed the league with France; but the beginning of his reign was difurbed by the wars of the perty claictains with each cther. Duncan Stew-Rebell.un art, fon to Alexander earl of Buchan, who had died in of:he carl prifon for burning the cathedral of Elgin, atrembling of Eu,han, hii followers under preterce of revenging his father's death, laid walle the county of Angus. Walter Ogily ${ }^{\text {, }}$, the therifl of Angus, attempting to repel the invaders, wis killed, with his brother and 60 of their followers. The king then gave at commifion to the carl of Crawford to dupprefs them; which he foon did, and moll of then wese cither killed a executed. The followins of the earl of Bachan were compofed of the wildelt Highlinders, diftinmuilied by the title of Cas i.renis, which $=G_{4}$ anfuers to that of banditti. That fuch a race of peo- the Cattcple exifed is certain from the recresds of Scotland; but renc:. it is not caly to detemine how they obtained their fublitence, being vois of the knowledge of agriculture and of every civil art. There is fume reafon to believe that many of them came from the Weftern Illes; and that they of their ancelors had emigrated from the ealtern parts of Ielmd. The lands they inhabiced were aever cultiva:ed till towards the nidule cf alte lat cen ury; :ind, according to the moit authertic accrunts, they lived entirely upno amimal hod.

The carl of Crawtord's ficcefs againit the f. liowers of Buchan encouraged Robert to intrult him with a commation for fubdung other infurgent. by whom the peace of the country wis diturbed. s.othind. with the royal favour. This propofal was readily accepted by both parties, and the north inch of Perth was to be the fcene of ation. liut, upon muftering the combatants, it was found that one of them, belonging to the clan Clattan, had abfented himfelf. It was propofed to balance this difference by withdrawing one of the combatants from the clan Kay; but not one of then could be prevailed on to refign his place. At laft one Henry Wind, a faddler, though no way connected with either party, offered to fupply the place of lim that was abfent, on condition of his receiving a French crown of gold (about $7 \mathrm{s}$.6 d . Sterling) which was immediately paid him. The comoat then began with incredible fury; but at latt, through the fuperior valour and fill of Henry Wind, viatory declared in farour of the chan Chattan. Only ten of the conquerors, befides Wynd, were left alive; and all of them defperately wounded. Of the clan Kay only one remained; and he having received no hurt efcaped by fwimming acrofs the Tay.

While thefe internal broils were going on, the truce which had lately been concluded with England was fo ill obferved, that it became neceflary to enter into frefh negociations. Thefe, like others which had taken place before, had very little effect. The buiderers on both fides had been fo accuftomed to ravage and plunder, that they could not live in quiet. King Robert alio
apparent of the crown, was now grown up to man's eftate, and it was thought proper to provide a fuitable confort for him. The king is faid to have fcandoloufly 206 put up his fon's marriage at auction, and offered him bchaviour to the lady whofe father could give him the higheit price. The earl of March was the higheft bidder ; and advanced a confiderable fum in ready money, on condition that his dangliter fhould become the royal bride. -This furdid match was oppofed by Douglas, who propofed his own daughter the lady Margery. So degenerate was the court of Scotiand at this time, that neither the king nor the duke of Rothefay oppofed this propofal of a new match, becaufe it was to be purchafed with a frefh fum; and they even refuled to indemnify the earl of March for the money he had already advanced.

As the duke of Aibany fided with Douglas, a council of the nobility was privately affembled, which annulled the contract of the lady Elizabeth Dunbar, the earl of March's daughter, in favour of the lady Margery, daughter to the earl of Douglas; but without taking any meafures for repaying the money to the earl of March. The continuator of Fordun informs us, that the eanl of Douglas paid a larger fum for his daughter's fortune than tnat which had been advanced by the earl of March, and that the earl of Douglas's daughter was married to the duke of Rothefay: that, before the marriage was celebrated, March demanded that the money he had advanced thould be reimburfed; but receiving an unfatisfactory anfwer, he declared, that as the king had not fulfilted his bargain, he would bring unexpected calamities upon the country. Accordingly he fled into England, leaving his caffle of Dunbar to the cuftody of his nephew Robert Maitland, who foon after put it into the hands of the earl of Douglas, called in hitory Archibald the Grim, from the fernnefo of his vifage.

As foon as Robert lieard of the revolt of the earl of March, he fent ambaffadors demanding back his fubject; but the requell was difregarded. On the other hand, the earl of March demanded repoffeflion of the caftle of Dunbar, pleading, that he had committed no act of treation, but had come to England under a fafe conduct frons king Henry, on purpofe to negociate his private affairs: but this requeft was difregarded; upon which he fent for all bis family and followers to England, where they joined him in great numbers. This produced a war between the two king. doms. The earl of March with Henry Percy fur. named Hot $/$ pur, invaded Scotland, penetrating as far as Haddington, and carrying off great numbers of the inhabitants into captivity. From thence they went to Peebles, and then to Linton, ravaging the country all the way as they pafied along. They next befieged the caftle of Hales, and took feveral of the neighbouring forts; but Archibald the Grim, or rather his fon, having ra fed an army againt them, they were fruck with terror, and fled to Berwick, to the gates of which they were purfued by the Scots. At this time the Scottifh admiral, Sir Robert Logan, was at fea with a fquadron; but mifcarried in an attempt be rrode upon fome Englifh thips of war that protected their fleet when fifting upon the coaft of Sooland. After this the Englitin plundered the Orkney inimds; which, though belong-

in Scotland, than they refolved to avail themfelves of it ; and invading the north, parts of England, demolifhed the and invading the north parts of England, demolifhed the
caitle of Wiak, and laid the neighbouring country under contribution. The fituation of Heary's affurs did not contribution. The fituation of Heary's affars did not
adnui of his refenting this infult. He contented himfelf with neminating his brother the earl of Weftmoretelf with neminating his brother the earl of Weftmore-
land, to treat with the Scots about a iruce or peace; or, if that could rot be cbtained, to make a mutual
agrement, that the towns of Dumfries in Scotland, or, if that could rot be cbtained, to make a mutual and Penrith in England, thould be free from holtilities during the wat. T'o this propofal the Scots paid no regard; and being encouraged by the court of Frunce,
who refented the depofition of lichard, they renewed regard; and being encouraged by the court of France,
who refented the depofition of Kichard, they renewed their ravages in England. In 1400 , the king of Enghand cailed a parliament, in order to conifult on the moot proper means of repelling the Scottifh invafions; anci in this he was greatly affited by the divifions of the Scots among themfelves. Th.e duhe of Rotbefay, the heirEngland. He had introduced the new title of duke, which he beltowed firtt on the prince royal ; but making an offer of that honour to one of the heads of the Douglas family, it was rejected with difdain. That powerful family had never loft fight of an ancient claim they had upon the cafte of Roxburgh, which was fill in the poffeffion of the Englifh; and this year the fon of the earl of Douglas, Sir William Stewart, and others, broke down the bridge of Roxburgh, plundered the town, and deftroyed the forage and corn there and in the neighbouring country. The Englifh applied for fatisfastion; but obtained none, as the confulion which involved the kingdom by the depofition of Richard II. and the acceflion of Henry IV. prevented them from having recourfe to arms, the only argument to which the scots patriots in thofe days would liften.

No fooner was the cataftrophe of Richard known

S:otland. ing to the crosm of Norway, were at that time go: verned, or rather farmed, by sinclair the Scots earl of Orkney and Caithnels.

All this time the earl of March continued under the protection of the king of England. He had rectived repeated invitations to return to his allegiazace : but all of them beng rejested, ha was proclaimed a trator; and the Scotifi governer made a formal demand of lim from king Henry. With this the later net orly refufed to con.ply, but renewed his league with the lord of the Illes. He pretended alfo, that at this time he had intercepted fome letters from the Scotilh regency, which called him "a talitor in the highelt degree ;" and he atileged this as a reafon why he protested not only the earl of March but the lord of the Illes.

On the 25 th of July 1400 , the carl of March renounced his homage, fealty, and fervice, to the king of Scotland, and transferred them to Henry by a formal indenture. For this the earl was rewarded with a pen- conquert of and even to meditate the conquelt of the kingdom. scotland. He had indeed many reafons to hope for fuccets; the principal of which were, the weaknefs of the Scottilh government, the divided ftate of the royal family, and the diffenfions among the chief nobility. For this purpofe the made great preparations both by fea and land; but before he fet out on his journey, he received a letter from the duke of Rothefay, lull of reproaches on acconar of the prefumptunus letters which Henry had addreffed to Robert and his nobility. 'The letter was addreffed by the duke to his :Adverfary of England, as the Scots had not yet recognized the title of Henry to the crown of England. 'lowards the end of it the dnke, according to the cultom of the times, defired Henry, in order to avoid the effufion of Chriftian blond, to fight him in perfon with two, three, or an hundied noblemen on a lide. But this challenge produced no other anfwer from Henry, than that "he was furprifed that the duke of Rothefay Thould coufider moble blood as not being Chrifitan, fince he defired the ettufion of the one and not of the other." Henry arrived at Jeeith on the very day in which he had appoin ed the Scottifi nobility to meet him and pay their homage, and conclude a peace between the two crowns. In all probability, he expected to have been joined by great numbers of the dificuntented Scots; and he flatiered the Englith with a promife of raifing the power and glory or their country to a higher pitch than it hat ever known. Under this pretext, he feized upers the fum of 350,000 pounds in ready money, befides as much in plate and jewels, which had been left by Rich. ard in the royal treafury. He raifed alfo vall contribntions on the clergy and nobility, and likewife on the principal towns and cities. At laft, tindi g that neither his vaft preparations, nor the intere!t of the e.rn of March, had brought any of the Se its to his fandard, he formed the ficge of Edinburgh cafte, which was delended by the duke of Rothefiy, and, as some fay, by the carl of Douglas. The duke of Albany, brother to king Rob:rt, was then in the field with :tn army, and tent a l-ter to king Henry, promiting, that if he sould remain where he was for fix days, he would give
him battle, and force him to raife the fiege, or lofe lis smiand. life. When this was writen, the duke was at Calder. muir ; and Henry was to nuch pleated with the letter, that he prefented the herald who delisered it with his upper garmen, atad a chain of geld; promifing, on his royd word, that he would remain where he was until the apponied day. On this occation, towever, the duke forleited his honour ; lor he fute:ed fix day, to clapfe without making any attempe on the Enghll anmy.

Henry, in the mean time, pufhed on the liege of Edinburgh caftle ; but net wihh fucha vigorrus rathe ance from the duke of Rothefay, that the bupes of :educing it were but fmall. At the fame time he was informed that the SWelth were on the point of ebe!lion under the famous chieltain named Ow." Gl.ndower. He knew alfo that many of the Englifh were highly dillatisfied with his title to the crown; and that he owed his peacente potretion of it 10 the atthe earl of March, who was the real heir to the un. fortunate Richard, but a nobleman of no ambition. lor thefe reafons he concluded it beft to raife the fiege of Edinburgh caltle, and to return to England. He then agreed to a truce for lix weeks, but which was afterwards prolonged, probably for a year, by the commintioners of the two crowns, who met at lielio.

In 1 tot, Scodand fuffered a great lofs by the death of Walter Trail, the archbilhop of St Andrew's, a moft exemplary patriot, and a perfon of grent intluence. Archibald Douglas the Grim had died fome time befure, and his lols was now feverely felt ; for the king himfelt, maturally fecble, and now quite difabled by his agre alsd infumities, was fuquelered from the world in luch a manner, that we know not even the place of his relidence during the lat invafion of Scotland by the Eing: lith. 'This year alro queea Armabella died, fo that none remained who might be able to leat thofe divifions which prevailed among the royal family. Rebort tul. = of Albany, a man of great ambition, was an enemy io the dake of Rothelity, the heir-apparent to the crusin; and endeavoured, for obvious reafions, to imprets his father with a bad opinion ot hin. 'This prince, howere?, appears to have been chargeable with no mirdemeanon: of any confequence, excepting his haing debatuches. under promite of maribage, the daughter of Williata Lind居y of Roffy. But this is not lupported by any credibie evidence; and, though it had been true, coud never juftify the horrid treatment he met with, and which we are nuw about to relate.

One Ramorgny, a man of the vilef principles, but Cortionacy an attendant on the duke of Kothefoy, had wos 1 is again? the contidence; and, pereciving how nich he sferted the duke of condua of his uncle the duke of $A!\mathrm{ba}^{*} y$, hat the villany to fuggeft to the prince the difatelang ham by afo fathation. The prince rejected this in!amous propofal with fuch horror and difjlealiare, that the vilinin, be. iag afraid he would dilclofe it to the dake of Albany, intormed the latier, under the feal of the mot invichatie fecrecy, that the prinec intended to murder im ; upon which the duke, and William Lindlay of Roliy his atfociate in the treafon, refolved upna the prince's death. J3y puatifing upon the doating king, Lindiy and K.lnacrgas obtained a writ dircited to lhe duke uf Alodfiy, impowering him to arrell his fom, and to heep him Hader sellraint, in ot der for his amerdatent. the fance

Siothand. traitors had previoully poffefed the prince with an apprehenfion that his life was in danger, and had perfuaded him to feize the caftle of St Andrew's, and to keep poffelion of it during the vacancy of that fec. Robert had nominated one of his bafard brethren, who was then deacon of S' Andrew's, to that bilhopric: but being a perfon no way fitted for fuch a dignity, he declined the honour, and the chapter refuted to elect any other during his lifetine; fo that the prince had a profpect of pofiefling the callle for fome time. He was riding thither with a fmall attendance, when he was arrefted between the towns of Nidi and Stratirum (according to the continuator of Fordun), and hurried to the very cafle of which he was preparing to take pulfeffion.

The duke of Albany, and the earl of Douglas, who was likewife the prince's enemy, were then at Culrof", waiting the event of their deteftable confpiracy; of which they were no fooner informed, than they ordered a ftrong body of ruffians to carry the royal captive from the cafle of St Andrew's; which they did, after clothing him in a suffet cloak, mounting him on a very forry horfe, and committing him to the cultody of two

Who is flarved to death. execrable wretches, John Seikirk and John Wright, who were o:dered by the duke of Albany to farve him to death. According to Buchanan, his fate was for fome time prolnged by the compantion of one of his keeper's daughters, who thrult thin oat cakes through the chinks of his prifon-valls, and by a woman wno, being a wet nurfe, found means to convey part of her nilk to him through a fmall tube. Both thefe charitailie females were detected, and put to death; the young lady's inhuman father being himfelf the profecutor. The prince himelf died a few days atter, on Eafter-eve, his hunger having impelled him to devour part of his own fleth.

In the mean time, Robert, being yet ignorant of the murder of his fon, had renewed, or rather confented to renew, hollilities with England. On the expiration of the truce, Henry had fent a commiffion to the earls of Northumberland and Weftmoreland, to of. fer the Scots any terms they could reafonably defire; but every offer of this kind being rejected, there was a neceflity for renewing hofilities. The earl of Narch liad received another penfion from Henry, on condition of his keeping on foot a certain number of light troops to act againit the Scots. This had been done; and fo effequally did thefe now amoy their enenies, that the earl of Douglas was obliged to take the field againt them. By dividing his men into fmall parties, he reprefed the depredations of thefe invaders; and Thomas Haliburton, the commander of one of the Scoltifh partier, made incurfions into England as far as Bamburough, from whence he seturned with a confiderable booty. This encouraged another chieftain, Patrick: Fiepburn, to make a fimilar attempt: but being elated with his fuccefs, he remained ton long in the enemy's country; fo that the eand of March had time to fend a detachment to intercept him on lis re. turn. 'This produced a defperate encounter, in which Hepburn valas killed ; the flower of the youth of Lothian, who had attended in this expedition, were cut oft, and fearce a fingle Scotfinum remaince unwounded.

On the news of this difalar, the earl of D unglas applied to the duke of Albany for afliftance. He was
imnedistely furnifhed with a confiderable army, accord. Scutiand. ing to fome, confifting of 10,000: according to others of 13,000; and according to the Englifh hitorians, of 20,000 men. Murdoc, the fon of the duke, attended the earl on this expedition, as did alfo the edrls of Mo. ray, Angus, Oriney, and many whers of the chict nobility, with 80 knights. Thie Sc t on this occation conducted themfelves with the fame imprudence they had done before. Having penetrated too tar into the country, they were intercepted by the Englith on their return, and obliged to engage at a place called Homeldon, under great difadvantages. The confequence wds, that they were utterly defeated, and almoft the whole army either killed or talien.
Henry Hotfur, to whom this viftory was chiefly owing, refolving to purfue the advantage he had gained, entered the fouthern parts of the kingdom, and l.id fiege to a cafle called Coiklazuys, on the borders of Te viot dale. The cafte was for ome time bravely deferd. ed : but at lift the governor entered into a treaty, by which it was agreed to deliver up the calle, in cate it was not relieved by the king or governor in fis weeks; during ribich time nn additional fontifications were to be made. But while the Englifh were retining, one of Percy's foldiers pretended that the Scots had broke the capitulation, by introducing a matteck into the place. The governor, hearing of this charge, offered tof fight any Englifhman who thould engage to make it good. A champion was accordingly fingled out, but was defeated by the Scotfman; and the Englith army retined according to agrecment. The mater then being debated in the Scottifl council, it was refolved to iend relief to the cafle. Arcordingly the duke of Albanys, with a powerful army, fet out ior the place; but before he came there, certain news were received of the defeat and death of Hotipur, at Shrewfury, as related under the article England, no 182.

In the year 1404, king Henry, exceedingly defirous of a peace with scotland, renewed his negociations for that purpofe. Theie, however, not being attended with fuccefs, hoftilities were lill continued, but without any remarkable tranfaction ou either fide. In the mean time, king Robert was informed of the miferable fate of his elden fon the duke of Rothelay; but was unable to reent it by executing juftice on fuch a powerful mumderer. After giving himfulf up to grief, therefore, for tome time, he refolved to provide for the fafery of his fecond fon Jimes, by fendiug him into France. This foheme was not communicated to the duhe of Albany; and the young prince took thipping with all inaginable fecrecy at the Dass, under the care
of the earl of Orkney. On his voyage he was taken by an Englith privatcer of Flamborough-head, and brught before Henry. The Englifh monarch having exammed the attendants of the grince, they told him that they were carrying the prince to France fur his education. "I underfand the Frencl tongre (replied Henry), and your countrymen ought to have been kind ennugh to lave trufted me with their prince's colucation." He then committed the prince and his attendants clofe prifoners to the tower of London. The news of this difatter arrived at the cafte of Ruthefay in the ifle of Bute (the place of Robert's refidence) while the king was at fupper. The news throw hime into fuch an agony of grief, that he died in tharee

Scotland. days, the 29th of March $1+05$, after having reigned near 15 years.

By the death of Robert, and the captivity of the prince, all the power devolved upon the duke of Alhany, who rias appoiated regent by a convention of the it:ates affembled at Scone. The allegiance of the people, however, to the'r captive prince could not be tha en ; fo that the regent was obliged to raife an army for the purpofe of refiuing him. Henry fummoned all his military tenants, and made gieat preparations: but, having agreed to treat of a finll peace with Irel.and and the kord of the lites, the : gent haid hold of this as a pre:ence for eritering into a thew negociation with the Englifh monurch; and a truee was concluded for a year diring which time all differences were to be fettiad. In confequence of this agreement, Rothelay, hing at arms, was appoisted commifary-gencral for the Fing and kingdom of Scotland; and in that quality repaired to the court of England. At the time when the prince of Scot:and was taken, it feems that there had been a trace, $h$ wever ill cibferved on both fides, fubfitting between the two nations. Rothefay produced the record of this truce, which provided that the Scots fould have a free navigation; and in conlequence of this, l.e demanded jultice of the captain and crew of the privateer who had taken the prisce. Henry ordered the matter to be inquired into: but the Englith broughe their complaints as well as the Scots; and the clams of both were fo intricate, that ti e examination fell to the ground, but at the fame time the truce was 2:9 prolonged.
Shitnies of In the end of the year 8409 , or the beginning of

1410, the war was renewed with England, and Henry pr-pared to frike a datal blow which he had 1 ng meditated againft Scrtland. He had, as we have feen, entered into a league with the Inrd of the Ifles, where a confiderable revelution then happened. Wahter Lefley had fucceeded to the eftate and honours of the earl of Rofs, in right of his wife, who was the heir. By that marriage, he had a firm nan ed Alexanler, who fuccecdesi him; and a daughter, Margaret, who was marned to the lord of the Itles. This Alexander had married one of the regent's daughters; and dying youn', he left behind him an enly daughter, Eur hane, who was deformed, and become a nun at North Berwick. Her grandtather, the regent, procured from h.er a refign:tien of the catidem of $R$ f, to which the was undoubted heir, in favuur of John easl of Dachan, but in pregudice of Donald l. rd of the Itcs, whis was the fon of Wargaret, fitter to the earl Alexavder, and conf quent1y the neatelt heir to the eftate after the nun. D. nald arplied for redrets; but this fuit being rejeeted, he, with his brother Jhin, fied in:o England, where he was mont graciounly received by king Hensy. According to the inttuctions given him by the Englifh monath, Dunald returned to his own dominions in the liles, where hie railed an army, and pating over into Refishire, violently feized on the eft ve in difiute. In at thort time he fouad himielf at the lead of 10,000 Highlancers; with whom he marched into the provir.ce of AIray, and from thence to Suthbogit and Gariosh, which he laid under enneributior. Adwaing towards Aberdeen, with a view to pay his troops with th plurder of that ci:y, which was then a piace a confliderabie tade, te was me: by tioe eul of Slarr, whom the te-

gent had emplosed to command againft him, at a vil. Scontar... lige called Harlaw, in the reighbourhood of Aber- $\underbrace{}_{280}$ dees. A fierce engagement enfued, in which great Eate of numbers were killed in both fidee, and the vî̂ory re- Harlaw. mained uncertain: but Donald, firditeg himfiff in the midtt of an enemy's country, where he conld raifen., recruits, began to setreat nest day; and t? e fhattered flate of the rog.l army proventing him from being purrued, he efaped to his osm dominion-, where in a flort time he fubnited, and iwore alleginge to the crown of Scotland.

In the mein time, II:nry continned the war with Scoiland, and refuied to rencw the truce, though frequently f licited by the Scot: He had now, how ever, fatlaned a great lufs by the defertion of tha earl of Minch, who had gone over to the Soots, theugh the hitlorims have not informed us of his guar:el with the Englth monarch. Oi hif re:urn to Scoth ind, he pose had been fully reconciled to t'ie 1 uuglas fanily, anal now lrove to diftinguith himfelf in the caufe of hi country. 'This, with thec untenance which was fhown the Scots by the coust of France, is bull palhithed bythe pupe in their fuvour, and the vignrous behavi ur of the regent himelf, contributed to reduce Henry to reafon; and we hear of no $m$ re hotilities I ctwec.a the wo nut ous till atter the dath of the Englith monareh, which hat pened in the year $1+13$.

In ${ }^{1}+15$, the truce being either broken or exrires, the Scuts made great preparations for belieging Berwick. The undertaking, $h$ wever, came io nothing ; all that was done during the campaign being the burning of Penrith by the Scots, and of Dumfries by the Englifh. Next year a truce was agreed upon, and a treaty entered intu for the taifom of King James; which was fo far advanced, that the Englifh king agreed to his vifitings Scotland, provided he engaged to forfeit 100,000 pounds Sterling in cafe of his failure t) re urn by a certain dity. Fur reafons now unknown, this tichy was broken off, and voll preparations were made for a n:w invafi n of Scotaad; which, however, was executed with to little fuccet:, that it became known amery the common people of Scotland by the name of the fule raid, or the fuolith expecition.
In $4+20$, died Kobert duke of Albany, regert of Scctland, at the aze of 80 ; and fuch was the vener:. ti $n$ which the Scots had for has memory, that his pit of regen: was cenferred upon h's eldit ion Wratech, though a perfen no way qualified for that Rati m.The war wi:h En, land wa, no:s difcontinuad; but in France Henry met wi:h the graze It oppotition fious the Sints auziliari:s, infomuch, that at hat has poo claimed aill the Scots in the fervice of the Deuplin to be rebels agantt the': hwial furcri, $n$, a ad tiratened to treat them as fich of erever he foud tham. Fcotlans. arrival there, he was iufirmed that the Scots, under the earl of Doughs, had made an irruption into England, where they hard burued Newark, but had becn forced to return to their own country by a pettilence, though a new invation was daly expected. luitend of refenting this infalt, Henr invited the earl of Douglas to a conference at Yoak; in which the later agreed to fer ve bim curing life, by fea and land, abroad or at home, argandt all living, except his own hege-lord the hing of Scotland, with 200 foot and as many horle, at his own charges; the king of England, in the mean time, allowing an annual revenue of $2 c o l$. for payms his expence in going to the army by fes or land.

At the fame time, a new, negrociation was jet on foot for the ranfom of king Jaines; but he d d not obitain his liberty till the year 1424 . Henry V. was then dead ; and none of his generals being able to tipply
his place, the Englifh power in France began to decline. They then became fenfible how necefifary it was to be at peace with Scotland, in order to detach fuch a formidable ally from the French intereft. James was now highly careffed, and at his own libert, within certain bounds. The Englifh even confulted him about the manner of conducting the treaty for his ranfom; and one Dougal Drummond, a prieft, was fent with a fafe conduct for the bithop ot Glafgow, chancellor of Scotland, Dunbar earl of March, John Montgomery of Ardroffan, Sir Patrick Dunbar of Bele, Sir Robert Lawder of Edrington, Sir William Borthwic of Borthwic, and Sir John Furreltor of Corfrorphin, to have an interview, at Pomfret, with their matter the captive king of Scotland, and there to treat of their common interefts. Noft of thefe noblemen and gentlemen had before been nominated to treat with the Englifh about their king's return; and Dougal Drumniond feems to have been a domeltic favouTite with James. Hitherto the Scottilh king had been allowed an annual revenue of 700 pounds: but while he was making teady for his journey, his equip.tges and attendants were increafed to thofe befitting a 10. vercign; and he received a prefent from the Einglith theaiury of 1001 . for his private expences. That he might appear with a grandeur every way fuitable to his dignity, at cuery ttage were provided relays of liorfes, and all mamer of filh, flelh, and fow, with couks and other fervants for furnilhing out the moft fimptuons royal entertainment. In this metting at Pomfret, James acted as a kind of a mediator between the Englith and his nwn fubjects, to whom he fully laid limfe'f open; but, in the mean time, the Eng1: in regency ifluad a commilfion for fettling the ter ms upon which James was to be reltored, if ne and his cimmifioners th uld lay a proper foundation for fuch a ireaty. The Euglifl commifiorers, were the bilhops (f Durham and Worcelter, the earls of Northumberland and Weftmoreland, the lords Nevil, Cornwal, and Chawouth, with mafter John Wodeham, and Robert Wateton. 'the initrecteens they received form one If the mof curious palliges of this hiltory; and we Thall here give them, as they are neceliary for confirm. ing all we have faid conceraing the difpofitions of the two ccurts at thas juncture.

Firf, To make al fint oppofition to any private conference between the king of Scotland and the Scotch commfioners.

Secondly, To demand that, before the faid king fhall have his full liberty, the kingdom of Scotland thould pay to the Enghlth government at leaft hirtyfix thouland pounds as as equivalemt, at two thoufand pounds a year, for the entertainment of King James, who was maintained by the court of England, and not to abate any thing of that fum ; but if pollible to get firy thouland pounds.

Thirdly, '1hat if the Scots thould agree to the payment of the fail fum, the Englith commifiuners Thould take fufficient fecurity and hollages for the payment of the fanie; and that if they illould not (as there was great reafon for believing they would) be to far mollified, by fuch ealy terms, as to offer to enter upon a negociation for a final and perpetual peace beween the two people, that then the Englith thould propofe the fame in the moof handiome inamer they could. Farther, that if fuch difficulties fhould arife as might make it impracticable immediately to conclude fuch perpetual peace, that the Englifh ambaffadors fhould, under pretence of paving a way for the fame, propofe a long truce.

Fourthly, That in cafe tie Englifh commiffioners fhould fucceed in bringing the Scots to agree to the faid truce, they thould further urge, that they fhould not fend to Charles of France, or to any of the enemies of Ensland, any fuccours by fea or land. Farther, that the faid Englifh commillioners thould employ their utmoft endeavours to procure the recal of the troops already furnithed by the Scuts to Fratuce. The Englifh are commanded to infilt very frenucufly upon this point, but with difcretion.

Fifthly, If the Sents. fhould, as a further bond of amity between the two nations, propofe a marriage between their king and fome noblewoman of England, the Englifh ecmmifioners are to make anfwer, "That the king of the Scots is well acquainted with many noblewomen, and even thofe of the blood-royal, in England; and that if the king of the Scots thall pleafe to open his mind more freely on that head, the Englifh commillioners fhall be very ready to enter upon conferences thereupon." But (continues the record) in cafe the Scotch commiffioners thould make no mention of any fuch alliance by marriage, it will not appear decent for the Englifh to mention the fame, becaufe the women of Eugland, at leaft the noblewomen, are not ulid to offer themfelves in marriage to men.

Sixthly, If there flould be any mention made concerning reparation of damages, that the commiftioners thould then proceed upon the fame as they flould think moft proper ; and that they fhould have power to offer fafe-conduct to as many of the Scots as thould be demanded, for to repair to the court of England. Thofe inftuctions are dated at Veltminfer, July 6ih 1423.

Nothing definitive was concluded at this rreaty, but that another meeting flould be held at York inftead of Pomfret. This meeting accurdingly took place. The Englifh commiffoners were, Thumas bifhop of Durham, chancellor of England, Philip bithop of Wincheftcr, H.nry Percy eal of Northumberland, and Mr John Wodeham. Thofe for Scotland were, William bifhop of Glafgow, George earl of March, Jumes Douglas us Dalveny, his brother Patrick abbut of Cambul: kemneth, Johu abbot of Bahnerino, Sir Patrick Dun-
$\underbrace{\text { Sinontan!. bar of Bele, Sir Robert Lauder of EJrington, Mr }}$ George Borthwic arch Jeacon of Glafgow, and Patric Houtton canon of Glafgow. On the tentlo of September, atter thecir meeting, they came to the following agreement:
Firft, That the king of Scotland ana his heirs, as an equivaleat for his entertainment while in England, flhou'd pay to the king of Linghath and liis heirs, at London, in the church of St Paul, by equal proportions, the fum of forty thoufand pounds Steriing.

Secondly, that the frit payment, anmunting to the fum of ten th. ouitind marks, fhould be made tix months after the king of Scolland's entering his own kingdom; that the lite fom flould be paid the nest year, and fo on during the fodce of fix years, when the whole fum would becleared; unlef, after payme..t of forty thoufand merks, the lall payment of ten thourfind fhould be remitted, at the intreaty of the inoft illuftrious prince Thomas duke of Exeter.

Thirdly, That the king of Scotland, before entering his own kingdom, flould give fufficient hoftages for performance on his part. But, in regard that the Scots pleripotentiaries had no inlltuations concerning hollages, it was agreced,

Fourthly, That the king of Scotland thould be at Branfpith, or Durham, by the firf of March next, where he fhould be attended by the nobles of his blood, and other fubjects, in order to $\hat{\text { is s the nember and qua. }}$ lity nf the hollages.

Fif:hly, That to cement and perpetuate the amity of the two kingdoms, the governor of Scotland thould fend ambutfadors to London, with power to conclude a contrat of marriage between the king of Scotland and fome hady of the lirft quality in England.
$J$ :mes, it is probable, had alre.dy fixed his choice upon the tady Joan, daughter to the late carl of Somerfict, who was fon to John of Gsunt duke of Lameaner, by his feconal martiatse ; but he made his peopple the camplineert, not onil, of confu'ting their opinion, but of cuncluding the match. The commitioners, affer their agreement at York, procceded towards I.ondon; and Thomas Somerville of Cirnwath, w.th Walter Oyilvy, were added to their number. Being arrived at thint capit.1, they rathied the former articles, and un. dertook for their king, that he flumuld deliver his honages to the king of Enghand's officer., in the city of Dirliam, before the latt day of the cufuing month of M. 1 el ; that he fhould alfo deliver to the faid ollicers four obiiiganory ietters, ins the whole fum of 40,0001 . fiom the four burghs of Ejinburgl:, Perth, Dundee, and Aterden; that be fould give his ob igatary letter to the fame purp- fe, betore removing from Durham, and thou'd renew the fame foir divs ater his arrival in his own king 3um; that the holktares might be changed from time tur time for others of the finne fortune and qualiy; thit if any of them thould die in Langlind, o hers thonkd be fent thit? er in their room; and that whale they continued to Itay in England, ties) thould live at their own charges.

The mariage of James with the lity Joan Beatufort was celebrated in the hersming of Februay $: 424$. The young king of England prefented hion with a fuit of clath of gold for the ceremony; and the next day he received a leg.l difcharge of 10,000 pounds, to be deduted from the 40,000 at which his ranfom
wes fised, and which fum was given as the marriagg. Scertand. prtion of the lady. The ceremony being performed, the king and queen fot out for Durlam, where the hoftage, wete wditins; and arrived at his own domininns, along with the carl of Northumberland and the chief of the rorthent iobility, who attended him with great pomp. On the $20: \mathrm{h}$ of April the fame year, he wais crowned at Scone; after which ceremony, he folluwed the exan:ple pratififed by other fovereigns at that time, of knizhting feveral noliemen and gentlemen.

Duri.g the deplendence of the treaty for James's releafe, the Scots had emigrated to France in fuch numbers, that no feww than 15.000 of them now appeared in arms under the duke of Touraine; but as the hiiltory of the war in that country has :lleady been given under the aticle Fr.asce, we fhall take no farther notice of it at prefens, but ietarn to the affairs of Scotland.
On his return James found hinfelf in a difagreeabie fituation. The great maxim of the duke of Albany, teveral wlien recent, had been to maintain himplef in power atures in, by exempting the lower clats of people frem taxes of every kind. This plan laad been continued by his fon Murdoch; but as the litter was defitute of his fathee's abiilties, the people abufed their happinefs, and Scorland became fuch a fcene of tapine, thatt no commoncr could fay he had a propecty in his own eftate. The Sicwatt fanily, on their acceffion to the crown of Scetland, were poifificd of a very contiderable patrimonis? ellate, indcyendent of the llanding revenues of the crown, which confifted chiefly of cuftoms, wards, and reliefs. The revenues of the paternal eftate, belonging to James, had they been regularly tranfmitted to hims would have more than maintained him in a liplendour equal to his dignity, while he was in England; nor would he in that cafe have had any occation fir an allowance from the king of Engh.and. But as the duke of Albany never intended that his nephew fould return, he parcelled out among his favourites the efiate of the Stewart family, in fuch a manner that James upon his return found all his patrimonial revenues gone, and many of them in the hands of his beft friends; fo that he had nothing to depend on for the fupport of hinicalf and his court but the crown-revenues abovementioned, and cven fome of thefe had been mortgaged during the late regency. This ci:cumfance, of itielf fufficiently difayreeable, was attended with two others, which tended to make it more fo. The one was, that the hollages which had been loff for the king's ra:fom in England, bcing all of them perfons of the firlt rank, were attended by their wives, f.nniiies, children, and cquipagee, which ivalled thore of the frame rank in Engitind, and diew a great deal of rc.idy rancy out uf the nation. The ofler circumflance arofe from the ciarge of the Scots normy in France ; where Chatles, who had receer been in al conditioa to fupprert it, was now seduced to the utn:off necellity : while the revenues of Jumes 1 imfelf were loth fanty ard procatious. Too reniedy theic ince nvenincoces, ther fore, the kiag obtained from lis parl ame:t an att oblif cing the fiernifs of the refperive countics to inqui-c whit linds and entates had belonged to his ancelters 1).wid II. Robere If. and Robert IIJ. ; and Jimes formed a lelithion of refiuming thefc hands wh:crever they contid be difoncred, witlouit regard to perfons or circumanancs. On tl is cccafi in

Scolland. occalion many of the moft illuffrions perfonages in the ple; but it was infantly broken, and the confpitators

287 Sccital of two fon, and the earl of Lennox the duke's father-inthe nubility haw, were put to death, though their crimes are not fpeesecute.1. cified by hitorians. Buchanan mentions a traution,
that James barbaronfly fent to the countef's of Lennox the heads of her father, huband, and fons; for the following more barbarous realion, that in the bitternefs of her grief the might drop fome exprefions tending to involve others in the fame cataftrophe. The countefe, however, calmly faid, "Ihat, if the charges again!t the criminals were proved, they deterved their tate."

James now proceeded with great firit to reform the abures which had pervaded every department of the ftate, protesed and encouraged leaming and learned men, and even kept a dairy in which he vrote down the names of all the learned maen whom he thought deferving of his encouragement. James himiell wrote fome puetry; and in mutic was fuch an excellent compofer, that be is with good realim looked upon as the father of Scots mufic, which has been fo much admured for its elegant limplicity. He introduced organs into his cha. pelh, and a much better fyjle of architecture into all buildings whether covil or religious. Neither did he confi e his cares to the fine arts, but encouraged and protected thole of all k'uds which were ufefui to fociety; and, in flort, he did more towards the civilization of his people tlais had beea done by any of his pre. decelifors.

In the mean time the truce continued with Endand. Janes, bowever, feemed not to have any inclination to enter into a perpetual alliatice with that kingdom. On the conirary, in 1.428 , he entered into a heaty with France; by which it was agreed, that a marr age thould be concluded between the $d u_{i}$ hin of France, atterwands Louis XI. and the young pincefs of Scotland; and to great was the neceffity of krog Chanles for noo s at that time, that he demanded only 600 fores as a portion fir the princefo.

The ratt of the reign of James was fpent in reforming abufes, curuing the aut oriy of the great barons,
283 and recovering the royal eltates out of the nands of murdered.

The king uflurpers. In his, however, he ufed io much feverity,
murdered. that he was at lait murdered, in the year $1+37$. The that he was at lat murdered, in the year ${ }^{1}+37$. The perpetrators of this murder were the earl ot Athol ; Rober: Grahame, wh, was connefted with the earl, and who was dric.ntented on account of his lofing the eftate of Strathern, which had been re-annexed to the cruwn and Robeit, grandchild and heir to the earl of Athy, and one of the king's domeltics. The king hand difmifed his army, without even referving to him. felf a body-gu rd, athd was at fupper in a Dominican convent is the neig'bonthood of Perth. Grahame had for fome time been at the head of a gang of cutl, w., :and is faid to have brought a party of them to l'ertin in the dend of the night, where he polled them near the convent. Waiter siraton, one of the king's cupbearers, went to bring fome wine to the king while at fupper; lout perceiving armed men 贝anding in the paltige, be gave the alarm, and was immediately killed. C.tharine D. ug'as, one of the queen's maids of howour, ran to boit the wuter do or ; but the bar was taken away ly $R$ bert Stuart, in order ro facilitate the entrance of the murdercrs. The lady thrult her arm into the fa-
the earl of March, was killed in attenipting to defend his lovereign, and the qucen received two wound, in attempting to interpofe herfelf betwixt her hufand and the daggers of the alfaffins. James delended himeielf as long as he could ; but at lalt expired under the repeated itrokes of his murderers, after having received 28 wounds.
After the murder of James I. the crown devolved Succacdupon his fon James II. at that time only feven years of age. A parliament was immediately called by the queen-mother, at which the noft cruel punithments were decreed to the niurderers if the late king. 'the crime, no doubt, delerved an exemplaty punilhment; but the barbanties i..ficted on time of thole wretches are focking to relate. Within lefs than fix weeks after the death of the king, all the confipitors were brought to Edinburgh, arraigned, condemned, and execute3. The meaner fort were hanged; but on the eanl of Athe 1 and Robert Graham the molt cruel torments were inllited, fuch as pinching with hot iron; diflocation of the joims, \&ec. The eanl of Athen, had belides, a c:own of red-hot iron put on his head; and wab afterward, cut up aive, his heart taken out, and, thrown into a fire. In th rt, fo dreadtul were thete puniffments, that Rineas Sylvius, the pope's nuncio, who beheld them, faid, that he was at a lols io determine whether the crime e. mmitted by the regicides, or the punilhment inflifed upon them, was the greater.

As the late king had prefcribed no form of a regency in cafe (f his death, the fettlement of the goverament became a matter of great dillicully as well as impuitance. Archibald carl of Douglas, who had beea created duke of Touraine in France, was by far the greatelt lubject in the kingdom; but as he had not been a favourite in the preceding reign, and the penple were now diffufted with rege::cies, he was not furmally appinted to the adminiftration, though by his high rank he in fact enjoyed the fupieme power as long as he lived; which, however, was but a thort time. He died supreree ${ }^{293}$ e the fame year ( $143^{\text {S }}$ ) ; and Sir Alexander Livingltone puvier diof Callendar was appointed to fucceed lum as governer vided beof the kingdom, that is, to have the execntive power, tween the while William Crichton, as chancellor, hid the direc. gove nor tion of the civil courts. 'lhis was a mift uniortunate cellos of partition of power for the public. The governor and the kingchancellor quarrelled ; the litter took poffieflion of the dom. king's perion and the cattle of Edinburgh, to neither of which he had any right; but the fommer had on his fide the queen-mother, a woman of intrigue and fris.t. Her fon was fhut up in the cantle uf L dinburgh; and in a thert lime theic was no appearance either of law or government in siotland. The govemor's edicts were comterated by thofe of the chancellor under the king's name, and thote who obeyed the chancellor were punithed by the goverace; while the young earl of Duagh.as, with his numerous followers and dependents, was a declared enemy of both partics, whom he equally fought to dellroy.

The queen-mather derman ied accefs to her fon, which The queenCrichton could find no preiext tor denying her; and no other fess fhe was accordingly admitted with: a fmall train into her fou at the cafte of Edimburgh. She played her part fo well, liberty.

## S C O

$\underbrace{\text { Scotland. }}$ in difembled with fo much art, that the chancellor, magil ing the had become a convert to his caufe, treated her with unbounded confidence, and fuffered her at all hours to hive free accefs to her fon's perfon. l'retending that he lad vowed a pilgrimage on the white church of Buchan, fhe recommended the care of her fon's perfon, t1!] her return, to the chancellor, in the moft patthetic and alfectionate terms; but, in the mean time, fhe fccre:ly fent him to Leith, packed up in a clotheschelt; and both the and James were received at Stirling by the governor betore the efcape was kinown. As every thing had been managed in concert with Livingfon, he immediately called ingether his friends; and laying before them the tyrannical behaviour of the charcellor, it was refolved to befiege him in the caftle of Edinburgh, the queen premifing to open her own granasies for the ufe of the army. The chancellor lorefaw the form that was likely to fall upon him, and fought to prevent it by applying to the carl of Douglas. That haughty nobleman anfwered him in the terms already mentioned, and that he was preparing to exterminate both parties. The fiege of Edinburgh caftle being formed, the chancellor demarded a parley, and to have a perfonal interview with the governor; which the latter, who was no ftranger to the fentiments of Dortglas, readily agreed to. Common danger united them in a common caufe; and the chancellor refigning to the other the cuftody of the caftle and the king's perfon, with the higheft profeflions of duty and Inyalty, the two competitors fwose an in:iolable friend. thip for cach other. Next day the king comented their union, by confirming both of them in their refpective charges.

The lawlefs example of the earl of Douglas encouraged the other great landholders to gratify their private animefitics, fometimes at the expence of their honour as well as their humanity. A family-difference happened between Sir Allan Stuart of Darnley, and Thomas Boyd of Kilmarnock; but it was concluded that both parties fhould come to a peaceable agreement at Polmaithorn, between Linlithgow and Falkirk, where Stuart was treacheroully murdered by his emerry. Stuart's death was revenged by his brother, Sir Alex. ander Stuart of Beilmouth, who challenged Boyd to a pitched battle, the principals bcing attended by a retinue which carried the refemblance of fmall armies. The conflist was fierce and bloody, each party retiring in its turn, and charging with frefh fury : but at laft victory declared itfelf for Stuart, tine bravelt of Boyd's attendants being cut off in the field. About this time, the iflanders, ander two n! their chieftains, Lauchlan Maclean and Murdoc Gibfon, notorious freebooters, invaded Scotland, and ravaged the province of Lenox with fire and fword. They were oppofed by Joln Colquhoun of Lufs, whom they flew, fome fay treacheroufly, and others, in an engagement at Lochlomond, near Inclimartin. After this, the robbers grew more outragcous than ever, not only flling all the neighbouring country with rapine, but murdering the aged, infants, and the defencelefs of both rexes. At laft, all the labouring hands in the kingdnm being engaged in domeftic broils, none were left for agricnlture ; and a dreadful famine enfued, which was a'tended, as ufual, hy a peftilence. James was now abut ten years of age; and the wifeft part of the kingdom agreed, that

Vol. XVI.
the public difleffes were owing to a total difrefped of sentiane. the royal authority. The young earl ot Donglis never had fewer than 1000 , and iometimes 2000 horfe in his train; fn that none was found hardy canugh to controul him. Ife pretended to be independent of the king and his courts of law; that he had a linh: ci judicature upnn his own large eftates; and that le was entitled to the exercife of royal power. In ennfequence of this he iflued his orders, rave protections in thieves and murderers, affeefed to brave the king, made knights, and, according to fome witers, cuen ronbic. men, of his own dependents, with a powe of fitting in parliament.

The queen-mothcr was not wholly guiltees of tinnf: abufes. She had fallen in love with and manied Sir James Stuart, who was commonly called the black Kright of Lorn, brother to the lord of that title, and a defcendant of the houfe of Darnley. Affection for lier hufband caufed her to rewevp her political intrigues; and not finding a ready compliance in the governor, her intereft inclined towards the party of the Douglaffes. The governor fought in Atengthen his authority by reRoring the exercife of the civil power, and the reverence due to the perfon of the fovereign.

The conduet of the lord Callendar was in many re. Thequeenfpects not fo defenfible, cither as to prudence or policy. mother aus When the queen expreffed her inclination that her hus. her hufband might be admitted to fome part of the adminiftra band irrtion, the governor threw both him and his brother prifonel. the lord Lorn intn prifon, on a charge of undutiful practices againft the ftate, and abetting the earl of Donglas in his enormities. The queen, taking fire at her hufband's imprifonment, was herfelf confined in a mean apartment within the caftle of Stirling; and a convention of the fates was called, to judge in what manner the was to be proceeded againft. The cafe was unprecedented and difficult; nor can we believe the governor would have carried matters to fuch extremity, had he not had frong evidences of her illegal behavi. our. She was even obliged to diffemble her refen:ment, by making an open profeffion before the fates, that the had always been entirely innocent of her hufband's practices, and that the irould for the future behave as a peaceable and dutiful fubject to the laus and the fovereign. Upon making this purgation (as Lindfay calls it), the was releafed, as alfo her huf band and his brother, being bailed by the chancellor and the lord Gordon, who becamz fireties for their good behaviour in the penalty of 4000 merks. The governor was afterwards accufed of many arbitrary and partial asts of power : and indeed, if we confider his fituation, and the violence of the parties which then divided Scotland, it was almof impoffible, conffitently with his own fafety, to have exerted the virtues eitles: of patriotifm or moderation.
'The chancellor was exceedingly vered at the fmail regard which the governor paid to his perfon and dig. nity, and feeretly conneted himelf with the queenmother ; but in the mean time he remained at Edin. burgh. The king and his inother continued all this time at Stirling ; where the governor, on pretence of confulting the public fafety, and that of the king's perfon, maintained a frong guard, part of which attended Jumes in his juvenile exercifes and diverfions. The queen-mother did not fail to reflefent this to her

294 Fiut are releafed.

## S C. O

Scutund. fon as a rellaint upon his liberty; and obtained his 295 The chancellor gets the ling's perfon into juis hands. confent to put himfelf into the chancellor's hands. The latter, who was a man of astivity and courage, knew well how to avail himfelf of this permiffion; and croffing the Forth in the dark with a frong body of horfe, thcy furrounded the king as he was hunting next morning by break of day. It was e:fy to perceive from the behaviour of James, that he was no ltranger to the chancellor's atrempt; but fome of the king's guard offring to difpute the poffeffion of his perfon, Sir W'illiam Livingtion, the governor's eldef fon, reltrained them, and fuffered the king to depart quietly. This furprifil happened on a day when the guvernor was ablent from Stirling ; and the chancellor, to make fure of his royal acquifition, eatered Edinburgh at the head of 4000 horfe, where the king and he were received by the citizens with loud acclamations of joy.

The governor fhowed no emotion at what had happened; on the contrary, he iuvited the chancellor to an interview, and fettled all differences with him in an amicable manner. The young lord Douglas, however, continued to brave both parties. As if he had been a fovereign prince, he demanded by his ambaffadors, Malcolm Fleming of Cumbernauld, and Allan Lawder, the invelliture of the fuvereignty of Touraine from Charles the feventh of France; which being readily granted him, ferved to increafe his pride and infolence. The firft fruits of the accommodation between the two great officers of fate was the holding of a parliament at Edinburgh, for redreffing the public diforders occafioned by the earl of Douglas; and encouragement was given to all perfons who had been injured to make their complaints. The numbers which on that occafion reforted to Edinburgh were incredible; parents, clildren, and women, demanding vengeance for the murder of their relations, or the plunder of their eltates; till, by the multiplicity of their complaints, they bec:me without remedy, none being found bold enough th encounter the earl of Douglas, or to endeavour to bring him to a fair tritl. The parties therefore wore difmifled without relief, and it was refolved to proceed with the baughty earl in a different manner. Letters were written to him by the governor and chancellor, and in the name of the fates, requefting him to appear with his friends in parliament, and to take that lead in public affairs to which they were entitled by their high rauk and great polfeffions. The manner in which thofe letters were perned made the thoughtlefs earl confider them as a tribute due to his greatnefs, and as proceeding from the inability of the government to continue the adminiftration of public affairs without his countenance and direction. Without dreaming that any man in Scotland would be fo bold as to attack him, even fingle or unarmed, he anfwered the letters of the chancellor and governor, by affuring them that he intended to fet out for Edinburgh : the chancellor, on pretence of doing him honour, but in reality to quiet his fufpicioris, net him while he was on his journey; and inviting him to his cafle of Crichon, he there entertained him for fome days with the greatef magnificence and appearance of hofpitality; The earl of Duaglas believed all the chancell.r's profeffions of $f_{1}$ iendflip, and even fha-ply checked the wifelt of his followers, who counfelled him nut to depend too much on appcarances, or to trult his brother and himfelf at
the fame time in any place where the chancellor had power. The latter had not only removed the earl's fufpicion, but had made him a kind of convert to patriotifm, by painting to him the miferies of his country, and the glory that mult redound to him and his friends in removing them. It was in vain for his attendants to remind him of his father's maxim, never to rifk himfelf and his brother at the fame time: he without hefitation attended the chancellor to Edinburgh ; and being admitted into the cafle, they dined at the fame table with the king. Towards the end of the entertainment, a bull's head, the certain prelude of immediate death, was ferved up. The earl and his brother farted to cheir feet, and endeavouted to make their efcape : but armed men rufhing in, overpowered them, and $t$ ying their hands and thofe of Sir Malcolm Fleming with cords, they were carried to the hill and beheaded. The young king endeavoured with tears to procure their pardon ; for which he was feverely checked by his unrelenting chancellor.

In 1443, the king being arrived at the age of 34 , declared himfelf out of the years of minority, and tnok upon himfelf the adminiftration of affairs. He appears to have been a prince of great fpirit and refolution; and he had occafion for it. He had appointed one Robert Sempil of Fulwoud to be chief governor of the caftle of Dumbarton; but he was killed by one Galbraeth (a noted partizan of the earl of Douglas), who feized upon the government of the cafte. The popularity of the family of Douglas having fomewhat fubfided, and the young earl finding himelf not fupported by the chief branches of his family, he began to think, now that the king was grown up, his fafeft courfe would be to return to his duty. He accordingly repaired to the king at Stirling; and voluntarily throwing himfelf at his majefty's feet, implored his pardon for all his tranfgreffions, and folemnly promiled that he would ever after fet a pattern of duty and loyalty to all the reft of his fubjects. The king, finding that he infilted on no terms but that of pardon, and that he had unconditionally put himfelf into his power, not only granted his requeft, but made him the partner of his inmoft councils.

James had always dilliked the murder of the earl of Douglas and his brother; and the chancellor, perceiving the afcendency which this earl was daily gaining at court, thought it high the to provide for his own fafety. He thereforc refigned the great feal, and retired to the calle of Edinburgh, the cnitody of which he pretended had been granted to him by the late king during his life, or till the prefent king fhould arrive at the age of 21 ; and prepared it for a fiege. The lord Callendat Great dif Cirndar, who know hequally oble turbances Crichton was to the earl of Douglay, and that he could in Scotnot maintain his footing by himfelf, religned likewife land, all his poils, and retired to one of lis own houfes, but kept poffeffion of the caftle of Stirling. As buth that and the cafle of Edinburgh were royal forts, the two lords were fummoned to furrender them; but inftead of complying, they juftified their conduct by the great power of their enemies, who fought their deflruation, and who had been fo lately at the head of robbers and outlaws; but promifed to furrender themelves to the king as foon as he was of law ful age (meaning, we fuppofe, either 18 or 21). This anfwer being deemed

## 298

 The young carl fubmits to the king and is received intufavour. Is put to death with his brother.$\underbrace{\text { Scotland. contumacious, the chancellor and the late governor, }}$ with his two fons Sir Alexander and Sir James Livingflon, were proclaimed traitors in a parlidment which was finmmoned on purp fe to be held at Stirling. In another parlianeat held at Perth the fame year, an act paffed, that all the lands and gonts which had belonged to the late king foould be pofleffed by the prefent king to the time of his lawful age, which is at fpecified. This af was levelled againt the late governor and chancellor, who were accufed of laving alienated to their own ufes, or to thofe of their friends, a great part of the royal efiects and jewels; and their eflates bcing conficated, the crecution of the fertence was committed to John Forreller of Corforphin, and other adherents of the earl of Douglas.

This fentence threw all the nation into a flame. The cafte of Crichton was befieged; and being furrendered upon the king's fummons and the difplay of the royal banner, it was levelled with the ground. It foon apreared that the governor and chancellor, the latter efpecially, had many friends; and in particular Kennedy bilhop of St Andrew's, nephew to James the firft, who fided with them from the dread and hatred they bore to the earl of Douglas and his family. Crichton thus foon fuund himelf at the head of a body of men; and while Forrefter was carrying fire and fword into his eftates and thofe of the late governor, his own lands and thofe of the Douglaftes were overrun. Corftorphin, Abercorn, Blacknefs, and other places, were plundered; and Crichton carried off from them more bnoty than he and his adherenss had loft. Particular mention is made of a fine breed of mates which Dougias had loft on this occation. That nobleman was io much exafperated by the great dumages he had fultained, that he engaged his friends the earl of Crawford and Alexander Ogilvy of Innerquharity, to lay walle the lands of the bifhop of St Andrew's, whom he confidered as the chict fupport of the wo minifters. This prelate wats not more ennfiderable by his high birth, than he was venerable by his virtue and fanctity ; and had, from a principle of confcience, oppofed the earl of Douglas and his party. Being confcious he had done nothing that was illegal, he firit admonifhed the earl of Crawford and his cuddjutor to delift from deftroying his lands; but finding lis adr:nnitions ineffectual, he laid the earl under an excommunication.

That nobleman was almoft as formidable in the northern, as the earl of Douglas had heen in the louthern, parts of Scotland. The Benedictinc monks of Aberbrothwic, who were poffefled of great property, had chofen Alexander Lindfay, his eldeft ion, to be the judge or bailiff of their temporalities; as they themfelves, by their profefion, could not fit in civil or criminal courts. Lindfay proved fo chargeable, by the great number of his attendants, and his high manm:er of living, to the monks, that their chapter removed him from his poft, and fubflituted in his place Alexander Ogilvy of Innerquharity, guardian to his nephew J hn Ogilvy of Airley, who had an hereditary claim upon the bailiwick. This, notwithllanding their former intimacy, created an irreconcileable difference between the two families. Each comperitor lirengthened himfelf by calling in the aliftance of his friends; and the Lord Gordon taking part with the Ogilvies, to whom he was
then paying a vifit, both parties immediately muftered $\underbrace{5 \text { oting }}$ in the neighbnurhond of Aberbrothwic. The e orl of Crawford, who was then at Dinjec, inmediately pofted to Abrbrothwic, and flacing himfelf berween the two atmies, he demanded to fpesk with Osilvy; but, before his requelt could be granted, he was killed by a common foldier, who was ignorant of his quality. H's death exafperated his friends, who immediatcly ruhted on their enemies; and a bloody confiit enfued, which ended to the as'vantage of the Lindfuys, that is, the earl of Crawford's party. On that of the Ogilvies were killed Sir John Oliphant of Aberdagy, John Forbes of Pitllign, Alexander Barclay of Gartley, Robert Maxwel of Tel:ng, Duncan Campbell of Campbelfether, William Gordon of Burrowfield, and others. Wirli thofe gentlemen, about 500 of their fullowers are faid to have fallen; but fome accounts diminifh that number. Innerquharity himfelf, in fying, was taken prifoner, and carried to the earl of Crawford's houfe at Finhaven, where he died of his wounds; but the Lord Gordon (or, as others call him, the earl of Huntley) efcaped by the fwifteefs of his horfe.
This battle feems to have let loofe the fury of civil difcord all over the kingdom. No regard was paid to magiftracy, nor to any defeription of men but that of clergy. The moft numerous, fierceft, and bet allied family, wraked its vengeance on its foes, cither by force or treachery; and the enmity that actuated the parties, fiffed every fentiment of honour, and every feeling of humanity. The Lindfays, f:cretly abetted and ftrengthened by the earl of Doug. las, made no other ufe of their viftory than carrying fire and fword through the eftates of their eaicmies ; and thus all the nirth of Scotland prefented feenes of murder and devaftation. In the weft, Robert Poyd of Dichal, governor of Dunbarton, treachercufly furprifed Sir James Stuart of Achmyntn, and treated his wite with fuch inbumanity, that fhe expired in three dass under her confinement in Dumbartun cafte. The caft e of Dunbar was taken by Patrick Hepburn of Hales. Alexander Dunbar difpoffeffed the latter of his cafle if Hales ; but it was retaken by the partifans of the earl of Douglas, whofe terants, particularly thofe of A sinandale, are faid to have behaved at that time with peculiar fiercenefs and cruelty. At laft, the gentlemen of the country, who were unconnefted with thofe robbers and murderers, which happened to be the cafe with many, hut themfelves up in their feveral houfes; cach of which, in those days, was a petry fortrefs which they vinualled, and provided in the beft manner they could for their uwn defcucc. This wife regulation feems to have been the firft meafure that compoled the public commutions.
The earl of Douglas, whofe power and influence at cou:t till continued, was fenfible that the clergy, with the wifer and more difinterefted part of the kingdom, confidered him as the fource of the dreadiul caldmitics which the nation fifficred; and that James himfelf, when better infurmed, would be of the fame opinion. He therefore fought to avail himicif of the juncture, by forming fecect but itrong connedions with the earl, of Crawford, Re fe, and nther great noblemen, who wanted to fee their feudal powers reftored to their full vigour. The queen-dowager and her hufband made litule or no figure during this feafon of public contufion: fise

## S C O $\left[\begin{array}{lll}788 & ] & \text { S C O }\end{array}\right.$

had retired to the cafle of Dumbar, while it was in
Hepburn's poffefion, where fhe died foon after. She left by her fecond hußband three fons; John, who in 1455 was made earl of Athol, by his uterine brother the ling; James, who under the next reign, in 1469 , wi:is created earl of Buchan ; and Andrew, who afterwards became bithoo of Murray. As the earl of Douglas was an enemy to the queen-dowager's huband, the latter retired to England, where he obtained a pafs to go abıoad, with 20 in his train ; but being taken at fea by the Flemith pirates, he died in his confinement.
The great point between the king and Sir William Crichon, whether the latter fhould give up the cafte to his majefty, remained nill undecided; and by the advice and direction of the earl of Douglas, who had been created lord-lieutenant of the kingdom, it had now fuffered a nine months fiege. Either the ftrength of the cafte or an opinion entertained by Douglas that Crichton would be is valuable acquifition to his party, procured better terms for the latter than he could otherwife have expected; for he and his followers were of. fered a full indemnity for all paft offences, and a promife was made that he fhould be reftored not only to the king's favour, but to his former polt of chancellor. He accepted of the conditions; but refufed to act in any public capacity till they were confirmed by a parliament, which was foon after held at Perth, and in whicl he was reftored to his eftate and honours. By this reconciliation betwee: Douglas and Crichton, the former was left at full liberty to profecute his vengeance againtt the Lord Callendar, the late governor, his friends and family. That vengeance was exercifed with rigour. The governor himfelf, Sir James Dundas of Dundas, and Sir Robert Bruce of Clackmannan, were forced to lave their lives by the lofs of their eflates; but even that could not preferve their liberty, for they were fent prifouers to the caftle of Dunbarton. The fate of Alexander, the governor's eldeft fon, and of two other gentemen of his nane and family, was fill more lamentable; for they were condemned to lufe their lieads. Thole feverities being inflicted after the king had in a manner readmitted the fufferers into his favour, fiwelled the public outcry againf the carl of Douglas. We have in Lindfay an extract of the fpeech which Alexander Livingfon, one of the moft accomplifhed gentlemen of his time, made upon the fcaffold, in which he complained, with great bitternefs, of the cruel treatment lis father, himfelf, and his friends, had underfone; and that he fuffered by a packed jury of his tnemies.
The king being now about 18 years of age, it was thought proper that a fuitable confort fhould be provided for him; and, after various confultations, Mary, the daughter of Arnold duke of Gueldres, was chofen, at the recommendation of Charles king of France, though the marriage was not completed till fome time Invafion of after. This produced an immediate rupture with EngScothond land. The earls of Salitbury and Nurihumberland enb the Eng- tered Scotland at the head of two leparate bodies. The t.th.
on under the earl of Northumberland, who had along Scolland. with him a lieutenant, whom the Scots of thofe days, from the bufhinefs and colour of his beard, called Magnus with the red mane. He was a foldier of fortune, but an excellent officer, having been trained in the French wars ; and he is faid to have demanded no other recompenfe for his fervices from the Euglifh court, but that he fhould enjoy all he could conquer in Scotland. The Scots, in the mean time, had raifed an army commanded by George Douglas earl of Ormond, and under himı by Wallace of Craigie, with the Lords Maxwell and Johnfon. The Englifh having paffed Solway Frith, ravaged all that part of the country which belonged to the Scots; but hearing that the earl of Ormond's army was approaching, called in their parties, and fixed their canip on the banks of the river Sark. Their advanced guard was commanded by Magnus ; their centre by the earl of Northumberland ; and the rear, which was compofed of Welch, hy Sir Jolin Pennington, an officer of courage and experience.
The Scots drew up in three divifions likewife. Their 301 right wing was commanded by Wallace, the centre by of Sark. the earl of Ormond, and their left wing by the Lords Maxwell and Johnfon. Before the battle joined, the earl of Ormond harangued his men, and infpired them with very high refentnent againft the Englifh, who, he faid, had treacheroufly broken the truce. The fignal for battle being given, the Scots under Wallace ruhhed forward upon their enemies: but, as ufual, were received by fo terrible a difcharge from the Englifh archers that their impetuofity mult have been fopped, had not their brave leader Wallace put them in mind, that their forefathers had always been defeated in diftant fights by the Englifh, and that they ought to truft to their fwords and fpears; commanding themat the fame time to follow his example. They obeyed, and broke in upon the Englith commanded by Magnus, with fuch fury, as foon fixed the fortune of the day on the fide of the Scots, their valour being fuitably feconded by their other two divifions. The flaughter (which was the more confiderable as both parties fought with the utmolt animofity) fell chiefly upon the divifion commanded by Magnus, who was killed, performing the part of a brave officer; and all his body-guard, confifting of picked foldiers, were cut in pieces

The battle then became gener.ll : Sir John Penning- The ${ }^{302}$ ton's divifion, with that under the earl of Northumber- lifhentirely land, was likewife ronted; and the whole Englinh army, defeated. fruck by the lois of their champion, fled towards the Solway, where, the river being furelled by the tide, numbers of them were drowned. The lofs of the Eng. lifh in flain amounted to at leaft 3000 men. Among the prifoners were Sir John Pennington, Sir Robert Harrington, and the cail of Northumberland's eldeft fon the Lord Percy, who loft his own liberty in forwarding his father's efcape. Of the Scuts about 600 were killed; but none of note, excepting the brave Wallace, who died three months after of the wounds he had received in this battle. The booty that was made on this occafion is faid to have been greater than any that had fallen to the Scots fince the battle of Bannockbarn.

The reft of the hiltory of this reign confifts almoft entirely of a relation of the cabals and conipiracies of the great men. The earl of Douglas had entered into a

Scotland. confederacy with the earls of Crawford, Moray, and 303 Rebellion of the carl of Dougas and others

Rots, and appeared on all occafions with fuch a train of followers as bade defiance to royal power itfelf. This indolence wats detelled by the wifer part of the nation; and one Maclellan, who is called the Tutor of Bombs, and was nephew in Sir Patrick Gray, captain of the

king's guard, refufed to give any attendance upon the earl, or to concur in his mealures, but remained at ag. init whatlocver persons within or without the red, and fend their lives, lands, goods, and fortunes, in defence of their debates and differences whatsoever." All who did not enter into this affociation were treated as enemies to the public; their lands were deffroyed, their effects plundered, and they themfelves imprifoned or murdered. Dromond fays, that Douglas was then able to bring 40,000 men into the field ; and that his intention was to lave placed the crown of Scotland upon his own head. How far he might have been influxenced by a ferne of the fame nature that was then palfang between the houses of York and Lancafter in Eng. land, we hall not pretend to determine; though it does not appear that his intention was to wear the crown himelelf, but to render: it defpicable upon his sovereign's head. It is rather evident, from his behaviour, that he did not affect royalty; for when James invited him to a conference is the cattle of Stirling, he offered to comply provided he had a fife conduct. This condition plainly implied, that he had no reliance upon the late at of parliament, which declared the proclamation of the king's peace to be a fufficient fe-

 earl, or to concur

 earl, or to concur

curity for life and fortune to all his fubjeets; and there is no denying that the fare conduct was expedited in the form and manner required.

This being obtained, the earl began his march towards Stirling with lis ufual great retinue; and arrived there on Shrove-Tuefday. He was received by the king as if he had been the belt of his friends, as well as the greatelt of his fubjects, and admitted to dup then ; and each departed to his oirn habitation, after agreeing to affemble with frefh forces about the beginming of April. James loft no time in improving this Thor respite; and found the nation in general mucks better difpofed in his favour than he had reason to expest. The intolerable rpprefiions of the great barons made his fubjeets efteem the civil, far preferable to the feudal, fubjection: and even the Douglaftes were devidod among themfelves; for the earl of Angus and Sir John Douglas of Dalkeith were among the molt forward of the royalifts. James at the fame time wot: let ers to the earl of Huntley, and to all the noblemen (f his kingdom who were not parties in the ennfederacy, betides the ecclefiaftics who remained firmly attached to his prerogative. Before the effed of thole letters could be knower, the infurgen:s had returned to Stirling (where James bill wifely kept himfelf upon the defenfive) ; repeated their infolences, and the ciprobrious treatment of his fare conduct; and at lat they plundered the town, and laid it in aches. Berry fill unable to take the cafle, partly through their own divifions, and partly through the divcrity of the opera-

Scotland. tions they were obliged to fupply, they left Stirling, and deftroyed the eftate of Sir Juhn Donglas of Dalkeith, whom they confidered as a dousle traitor, be. catufe he was a Douglas and a good fubject. They then befieged his caftle: but it was fo bravely defended by Patrick Cockburn, a gentleman of the family of Langton, that they railed the fiege; which gave the royal party farther leiture for humbling them.

All this time the unhapily country was fuffering the molt cruel devaltations; for matters were now come to fich extremity, that it was neceflary for every man to be a royalit or a rebel. The hing was obliged to keep on the defenlive; and though he had ventured to leave the caltle of Stirling, he was in no condition to face the rebels in the field. 'They were in poffeffion of all the ftrong paffes by which his friends were to march to his afliftance; and he even confulted with his attendants on the means of efcaping to France, where he was fure of an hofpitable reception. He was diverted from that refolution by bilhop Kennedy and the earl of Angus, who was himfelf a Douglas, and prevailed upon to wait for the event of the earl of Huntley's attempts for his fervice. This nobleman, who was defcended from the Seatons, but by marriage inherited the great eftates of the Gordons in the north, had raifed an army for James, to whofe family he and his anceftors, by the Gordons as well as the Seatons, had been always remarkably devoted. James was not miftaken in the high opinion he had of Huntley; and in the mean time he iffued circular letters to the chief ecclefiaftics and ho-dies-politic of his kingdom, fetting forth the neceffity he was under to proceed as he had done, and his readinefs to protect all his loyal fubjects in their rights and privileges againtt the power of the Douglaffes and their rebellious adherents. Before thofe letters could have any effect, the rebels had plundered the defencelefs houfes and eftates of all who were not in their confederacy, and had proceeded with a fury that turned to the prejudice of their caufe.

The indignation which the public had conceived againft the king, for the violation of his fafe conduct, began now to fubfide; and the benaviour of his enemies in fome meafure juftified what had happened, or at lealt made the people fu!pect that James would not have proceeded as he did without the Arongeft provocation. The forces he had affembled being unable, as yet, to act offenfively, he refolved to wait for the earl of Huntley, who by this time was at the head of a confiderable army, and had begun his march fouthwards. He had been joined by the Forbefes, Ogilvies, Leflies, Grants, Irvings, and other relations and dependents of
his family; but having advanced as far as Brechin, he was oppofed by the eall of Crawford, the chief ally of the earl of Douglas, who commanded the people of Angus, and all the adherents of the rebels in the neighbouring countries, headed by foreign officers. The two armies joining battle on the 18 th of May, vitory was for fome time in fufpenfe; till one Colofs of Bonnymoon, on whom Crawford had great dependence, but whom he had imprudently difobliged, came over to the royalifs with the divifion he commanded, which was the beft armed part of Crawford's army, confifting of battle-axes, broad-fwords, and long fpears. His defection gave the fortute of the day to the earl of Huntley, as is left the contre flank of Crawford's army en-
tirely expofed to the royalifts. Hc himfelf lof one of his brorhers: and fled with another, Sir John Lind. dity, to his houfe at Finhaven, where it is reported that he broke out into the following ejaculation: "That he would be content to remain feven years in hell, to have in fo tintely a feafon done the hing his mafter that fervice the earl of Huntley had performed, and carry that appiaufe and thanks he was to receive fiom him."

No author infurms us of the lof's of men on either fide, though all agree that it was very confiderable upon the whole. The eal of Huntley, particularly, loit two brothers, William and Henry; and we are told, that, $t$ inderanity him for hic good fervices, as well as for the rewards and pre:ents he had madc in lands and privilege, to his faithful followers, the hing beltowed upun him the lands of Badenoch and Lochaber.

The battle of Brechin was not immediately decifive The battle of Brechin was not immediately decifive The rele
in favour of the king, but proved fo in its cenfequences. Hion fuyThe earl of Muray, a Douglas likewife, took advantage proffel. of Huntley's abience to harals and ravage the eftates of all the royalifts in the north; but Huntley returning from Brechin with his victorious army, druve his enemy into his own county of Molay, and afterwards expelled him even from thence. James was now encruraged, by the advice of his kinfman Kennedy bifhop of St Andrew's, to whole firmnets and prudence he was under great obligations, to proceed againt the rebels in a legal manner, by holding a parlament at Edin. burgh, to which the contederated lords were fummoned; and upon their non-compearance, they were folemnly declared traitors. 'This proceeuing feemed to make the rebellion rage more fiercely than ever; and at laft, the confederates, in fact, difowned their allegiance to James. The earls of Douglas, Crawford, Ormond, Moray, the Lord Balveny, Sir James Hamilton, and others, figned with their own hands public manifeftoes, which were palted on the doors of the principal churches, importing, "That they were refolved never to obey command or charge, nor anfwer citation for the time coming; becaule the king, fo far from being a juft matter, was a bloodfucker, a murderer, a tranfgreifor of hofpitality, and a furprifer of the innocent." It does not appear that thofe and the like atrocious proceedings did any fervice to the caufe of the confederates. The earl of Huntley continued victorions in the north; where he and his followers, in revenge for the earl of Moray's having burnt his caftle of Huntley, feized or ravaged all that nobleman's great \&llate north of the Spey. When he came to the town of Forres, he burnt one fide of the town, becaufe it belonged to the earl, and fared the other, becaufe it was the property of his own friends. James thought himfelf, from the behaviour of the earl if Douglas and his adherents, now warranted to come to extremities; and marching into Annandale, he carried fire and fword through all the eftates of the Douglaffes there. The earl of Crawford, on the other hand, having now recruited his Arength, dellroyed the lands if all the people of Angus and of all others who had abandoned him at the battle of Brechin; though there is reaton to believe, that he had already fecretly refolved to throw himfelf upon the king's mercy.

Nothing but the moft obftinate pride and refentment could have prevented the earl of Douglas, at this time, from taking the advice of his fricnds, by returning to
 -

He coloured his contumacy with the fecious pretext, that his brother's fate, and thofe of his two kinfmen, fufficiently inftructed him never to truft to James or his minitters; that he had gone too far to think now of receding; and that kings, when once offended, as James had been, never pardoned in good earnell. Such were the chiefreaIons, with others of lefs confequence, which Drummond has put into the mouth of Douglas at this time. James, after his expedition into Annandale, lound the feafon too far advanced to concinue his operations; and returning to Edinburgh, he marched northwards to Angus, to reduce the carl of Crawford, who was the fecond rebel of pawer in the k:ngdom. That nobleman had hitherto deferred throwing himfelf at the king's teet, and had relumed his arms, in the manncr related, only in hopes that better terms might be obtained from James for himfeif and his party. l'erceiving that the earl of Douglas's obllinacy had cooled fome other lords of the contederacy, and had put an end to all hopes of a treaty, he refulv=d to make a merit of breaking the con-

310 Who is received into favour.

311 federacy, by being the firf to fubmit. J mes having arrived in Angus, was continuing his march through the country, when the earl and fome of his chiel fullowers fell on their knees before him on the road, bareheaded and barefouted. Their dreary lonks, their fuppliant poftures, and ti:e tears which ifreamed abundantly from the earl, were exprellive of the molt abjet contrition ; which was followid by a penitential lpeech made by the earl, acknowledging his crimes, and imploring furgivenefs.

James was then attended by his chief counfellors, particularly bilhop Kennedy, who, he refolved, fhould have fome thare in the liavour he meast to extend to the earl. He akked their advice; which proving to be un the mercifill fide, James promifed to the earl and his foliowers reftitution of all their eitates and honours, and full pardin for all that had paifed. The earl, as a grateful retribution for this favnur, before the king left Angus, juined him with a noble troop of his friends and foliowers; and, attending him to the north, wats extremely active in fuppraling ail the remains of the rebellion there.

The fubmifion of the earl of Crawford was fullowed by that of the earl of Douglas; which, however, continue.I only for a thont time. This powerful nobieman fonn refumed his rebe.lious pradices; and, in the year ${ }^{3} 45$ t, railed an army to fight againt the king. The king erested his thandard at St Andrew's; marched froms theuce to Falkland; and ardered all the forces of Fif:, Angus, and Strathern, with thofe of the nothsern parts, to rendervous by a certain day at Stirling ; which they did to the number of 30,000 . Douglas afferabled his forces, which amounted to $+0,000$, fume fay $60,000 \mathrm{men}$, on the fouth lide of the siver Carron, about half way between Stissing dad Abercorn. How: ever, notwithlanding this fupelionty or force, the earl did not think it proper to light his lovereisn. Bifinp Kernedy, the prelate of St Andr.w's, had atsied the ki::g t. divide his enemies by oil ing them pardon fe. parately; and fo good an effeet bidd chis. that in a few days the call found himelf deererted by a $i$ his num rous army, exceptin! about too of hic naareit nemes and domeftics, with whom he retired toward: England. His
friends had indeed advifed him to come to a battle im. Scotland. mediately; but the earl, for rea?ons now unknown, refufed. However, in his journey fouthward, he raifed a confiderable body of forces, confifting of his own te. nants, of outlaws, robbers, and borderers, with whom he renewed his depredations on the loyal fubjects of the king. He was oppufed by the earl of Angus, who, though of the name of Douglas, enntinued him in the royal caufe. An engagement enfued at Ancram-muir; He is enwhere ! Touglas was entirely defeated, and he himfelf sirely dewith great difficulty efcaped to an adjacent wood. feated. What his fate was atter this battle does not appear ; but it is cercain that his cflates were afterwards forfeited to the king.

The reft of the reign of James II. was fpent in ma- King Jo king proper regulations for the good of his people. In kited by 1400 he was killed at the fiege of Roxburgh caltle, by the burfing of a cannon, to which he was too near when it was dicharg d. This fiege he had undertaken in favour of the queen of England, who, after lofing feveral battles, and being reduced to diftrefs, was obliged to apply to James for relief. The nobility who were prerent concealed llis death, for fear of difenuraging the foldiers; and in a few hours after, the queen appested in the camp, and prefented her young fon, James III. as ther king.
James III. was not quite feven years of age at his acceffion to the crown. The adminittration naturally devolved on his moth:r ; who pulbed the fiege of Roxburgh caftle with fo much vigour, that the garrion was obliged to capitulate in a few days; after which the army ravaged the country, and took and difmantled the cafte of Wark.-In 4466 , negociations were begun for a marriage between the ynung king and Margarit princefs of Denmark; and, in 1468, the following conditions were Atipulaced. I. That the annual rer. $h$ therto paid for the northern Ifles of Orkney and Shetland mould be for ever remitted and extinguifhed. 2. That king Chriltiern, then king of Denmark, Mould givc 60,000 florins of gold for his da" ghter's portion, whereof ro,000 Thould be paid before her departure frem Denmark ; and that the iflands of Orkney frould be made over to the crown of Scotland, by waly of pledge for the remainder ; with this exprefs provifi, that they fhould return to that of Norway after complete payment of the whole fum. 3. That king James fhould, in cafe of his dying before the faid Margaret his fpoufe, leave her in poffeftion of the pulace of Linlithgow and caftle of Down in Menteith, with all their appurtenances, and the third part of the ordinary revenues of the crown, to be enjoged by her during life, in cafc the Phould choofe $t o$ relide in Scotland. 4. But if the rather chofe to return to Denmark, that in lieu of the faid liferent, palace, and cafte, fte fhould accept of $1: 0,000$ Horins of the Rhine; from which fum the 50,000 due for the remainder of her portion being deduced a:ld allowed, the inands of Orkney fhould be reanncaed to the c1own of Nirway as beforc.
When there articles were agreed upon, Chriltiern found himuluf unable to fulfil his part of them. Beir.g at that time engaged in an unfuccefsful war with Sweden, he could not advance the to,000 florins which lic had promiled to pay down as patt of his dallghter's fortune. He was therefure obliged to apply to the plenipotentiaries to accept of 2000 , and to take a farther

317
Beginning
of James's misfortunes.

In ${ }^{1}+76$, thofe misfortunes began to come on James which aftervards terminated in his ruin. He had made his brother, the duke of Albany, governor of Berwick; and had entrufted him with very extenfive powers upna the borders, where a violent propenfity for the fevdal law ftill continued. The Humes and the Hepburns, then the molt powerful fubiects in thofe parts, could not brook the duke of Albany's rgreatnefs, efpecially after he had forced them, by virtue of a late at, to part with fome of the eftates which had been inconfi- The pretended fcience of judicial aftrology, by which James happened to be incredibly infatuated, was the eafieft as well as moft effectual engine that could work their purpofes. One Andrew, an infamous impotor in that art, had been brought over from Flanders by James; and he and Schevez, then archbifhop of St Andrew's, concurred in perfuading James that the Scotch lion was to be devoured by his own whelps; a prediction that, to a prince of James's turn, amounted to a certainty.

The condition to which James reduced himfelf by his belief in judicial aftrology, was truly deplorable. The princes upon the continent were fmitten with the fame infatuation; and the wretches who befieged 1 is perfon had no fafety but by continuing the delufion in his mind. According to Lindfay, Cochran, who had fome knowledge of architecture, and had been introduced to James as a matter-mafon, privately procured an old woman, who pretended to be a witch, and who heightened his terrors by declaring that his brothers intended to murder him. James believed her; 319 and the unguarded manner in which the earl of Mar treated his weaknefs, exafperated him fo much, that
the earl giving a farther loofe to his tongue in railing againt lis brother's unworthy favourites, was arrefted, and committed to the cafte of Craig Miller; from whence he was brought to the Canongate, a fuburb of Edinburgh, where lie fuffered ceath.

320
Duke of Albany a:retted, bir when his brother the earl of Mar's tragedy was acted; and James could not be eafy without having him likeefcapes. wie in his power. In hopes of furprifing him, he marched to Dunbar: Lut the duke, being apprifed of his coming, fled to Berwick, and ordered his cafle of Durbar to be furrendered to the lord Evendale, though not before the garriton had provided themfelves with loats and fmall veffels, in which they efcaped to Engl.nd. He ventured to come to Edinburgh ; where James was fo well ferved with f(pies, that he was feized,
and commtted clofe prifoner to the canle, with orders
that he fhould foeak with none but in the prefence of his keepers. I'he duke had probably fufpected and provided agant this duagreeable event; for we are told that he had agents, who every day repaired to the caltle, as if they had come from courr. and reported the fate of maiters between him and the king, while his keepers were preient, in fo favourable a light, that they made no coubt of his foor: regaining his liberty, and being re:chmitted to his brother's favour. The feeming negocistion, at laft, went fo profperoufly on, that the duke orve his keepers a kind of a farewell entertainment, previcus to his obtaining a formal deliverance ; and liey drank fo immuderately, that being intox.cared, they gave him an opportunity of efcaping over the cafte wail, by converting the fleets of hi, bed into a rope. Whoever knows the fituation of that fortrefs, mult be amazed at the boldne?s of this attempt; and we are told that the duke's valet, the only domef. tic he was allowed to have, making the experiment before his mafter, broke his neck : upon which the duke, lengthening the rope, fid down unhurt; and carrying his fervant on his back to a place of fafety, he went on board a fhip which his friends had provided, and efcaped to France.

In 1482, the king began to feel the bad confequences of taking into his favour men of worthlefs characters, which feems to have been one of this prince's pernicious foibles. His great favourite at this time was Cochran, whom he had raifed to the dignity of earl of Mar. All hiftorians agree that this man made a mot infamous ufe of his power. He obtained at laft a liberty of coinage, which he abufed fo much as to endanger an infurrection anong the poor people; for he iffued a bafe coin, called llack:money by the common people, which they rcfured to take in payments. This favourite's fkill in architecture had firlt introduced him to James; but he maintained his power by other arts; for, knowing that his matter's predominant paffion was the love of money, he procured it by the meaneft and moft oppreffive methods. James, however, was inclined to have relieved his people by calling in Cochran's money; but he was diverted from that rcfolution, by confidering that it would be agreeable to his old nobility. Betides Cochran, James had other favourites, whofe profeffions rendered them fill lefs worthy of the royal countenance; James Hommil, a taylor, Leonard a blackfmith, Tortifan a dancing-mafter, and fome others. The favour thown to thefe men gave fo much offence to the nobility, that, after fome deliberation, they refolved to remove the king, with fome of his leaft exceptionable domeftics (but withnut offering any violence to his perfon) to the ca:tle of Edinburgh ; but to hang all his worthlefs favourites over Lawder-bridge, the common place of execution. Their deliberation was not kept fo fecret as not to come to the ears of the favourites; who fufpecting the worft, wakened James before day-break, and informed him of the meeting. He ordered Cochran to repair to it, and to bring him an account of its proceedings ( L ). According to Lind-

Secret negociations with Henry VII. of England.
fay, who feems to have had very minute information as to this event, Co.hrin rudely knocked at the door of the church, juft after the affembly had finifhed their confultation; and upon Sir Robert Douglas of Lochleven (who was appointed to watch the door) informing them that the earl of Mar demanded admittance, the earl of Angus ordered the door to be thrown open; and rufhing upun Cochran, he pulled a maffy gold chain from his neck, laying, that a rope would become him better : while Sir Robert Douglas Atripped him of a coftly blowing horn he wore by his fide, as was the manner of the times, telling him he had been too long the hunter of mifchief. Cochran, with aftonifhment, afked them whether they were in jeft or earneft ; but they foon convinced him they were in earneft by pinioning down his arms with a common halter till he fhould be carried to execution.

The earl of Angus, with fome of the chief lords, attended by a detachment of troops, then repaired to the king's tent, where they feized his other favourites, Thomas Prefton, Sir William Rogers, James Hommil, William Torfifan, and Leonard: and upbraided James himfelf, in very rude terms, with his mifoonduet in government, and even in private life, in not only being counfelled by the above minions, but for keeping company with a lady who was called the Daify. We know of no refiftance made by James. He only interceded for the fafety of a young gentleman, one Jnhn Ramfay of Balmain. Cochran, with his other worthlefs favourites, were hanged over Lawder-bridge before his eyes; and he himfelf was conducted, under an eafy reftraint, to the calle of Edinburgh.

James, though corfined, belaved with great fpirit; and even refufed to pardon thofe who had confined him, or who had any hand in the execution at Lawder. At laft, however, he was relieved by the duke of Albany, who, at the queen's delire, undertonk to deliver her hufband from confinement. This he accomplifhed as rome fay, by furprifing the caftle of Edinburgh ; though, according to others, the gatcs were opened, upon a formal requifition made for that purpofe hy two heralds at arms. After he had obtained his liberty, the king repaired to the abbey of Holyroodhoufe with his brother, who now acted as his firlt miniller. A!l the lords who were near the capital came to pay him their compliments; but James was fo much exafperated at what had happened, that he committed 16 of them prifiners to the caftle of Edinburgh. After his relcafe, J.mes granted a patent to the citizens of Fidinburgh, and enlarged their privileges.

In 1487, James finifhed fome fecret negociations in which he had engaged with Henry king of England fome time. The principal articles agreed on between the two monarchs were, That king James's fecond fon Vol. XVI.
fhould marry Catharine the third daughter of Ed. ward IV. and fifter to the princefs Elizabeih, now queen of England; and that James himfelf, who was now a widower, fhould marry queen Elizabeth. A third marriage was alfo to be concluded between the duke of Rothelay and another daughter of Edward IV. That in order to thefe treatics, and for ending all controverfies concerning the town of Berwick, which the king of Scotland delired fo much to polfefs, a congrefs flould be held the enfuing year.

But in the mean time a mof powerful confederacy was formed againft the king; the origin of which was as follows. James was a great patron of architecture ; and being pleafed with the fituation of Stirling canternued and being pleafed with the fituation of Stirling caftle, again!t the he refolved to give it all the embelliflments which that kn's. art could beftow; and about this time he made it the chief place of his refidence. He raifed within it a hall, which at that time was deemed a noble fructure : and a college, which he called the chapel-royal. This college was endowed with an archdean who was a bifhop, a fubdean, a treafurer, a chanter and fubchanter, with a double fet of other officers ufually belonging to
fuch inftitutions. The expences neceffary for maintainwith a double fet of other officers ufually belonging to
fuch inftitutions. The expences necefary for maintaining thefe were confiderable, and the king had refolveal to affign the revenues of the rich priory of Coldinghani
for that purpole. This priory hadd been generally held to atlign the revenues of the rich priory of Coldinghani
for that purpole. This priory had been generally held by one of the name of Hume; and that family, through length of time, confidered it as their property: they
therefore ftrongly oppofed the king's intention. Tlie therefore Atrongly oppofed the king's intention. The difpute feems to have lafted fome ycars: for the forme. parliament had paffed a vote, annesing the priory to the king's chapel-rnyal ; and the parliament of this year had paffed a flatute, Arictly prohibiting all perfons, fpiritual and temporal, to attempt any thing, directly or indirectly, contrary or prejudicial to the faid urion and anney, che pread anexation. The Humes refented their being ftripped family of of fo gainful a revenue, the lofs of which afected moft Huric. of the gentlemen of that name; and they united themfelves with the Hepburns, another powerful clan in that neighbouroood, under the lord Hales. An alfociation was foon formed ; by which both families engaged to ftand by each other, and not to fuffer any prior to be received for Coldingham, if he was not of one of their furnames. The lords Gray and Inummend forn joined the afociation ; as did many other noblemen atd gentlemen, who had their particular caufes of difcontent. Their agents gave out, that the king was grafping at arbitrary power ; that he had acquired his popnlarity by deep hypocrify; and that he was refolved to be fignally revenged upon all who had any hand in tie exccution at Lawder. The call of Angus, who wats the foul of the confederacy, advifed the confipirators to apply to the old carl of Douglas in head them: but that nobleman was now dead to all ambition, and inflead ${ }_{5} \mathrm{H}$

siotand. of cucouraring the confpiratnrs, he pathetically exhorted them to break off all their rebellious connections, and return to their duty; exprelling the molt fincere contrition for his own paft conduct. Finding he could not prevail with them, he wrote to all the numerous friends and defcendants of his family, and particularly to Douglas of Cavers, theniff of Teriotdale, diffuading them from entering into the confpiracy; and f.me of

328 Ixtinction of one of the branches of the family of Dourisas.

## mous beha-

 viour of Jumes. his original letters to that effect are faid to be At:ll extant. That great man furvived this application but a flort time; for he died without ilfue at Lindores, on the 15 th of April 3458 ; and in him ended the firt bran $h$ of that noble and illuftrious houfe. Fie was remarkable for being the molt learned of all the Siots nobility, and for the comlinefs of his perfon.James appears to have been no franger to the proceedings of the confpirators: but though he dreaded them, he depended upon the proterton of the law, as they did upon his pufillanimits. His degeneracy in this refpet is remarkable. Defcended from a race of heroes, he was the firlt of his family who had been branded with cowardice. Buthis conduat at this time fully juftiies the charge. Infead of vigoroully fupporting the execution of the laws in his own perfon, he fhut himfelf up in his beloved calte of Stirling, and raifed a body-guard; the command of which he gave to the lord Bothwel, mafter of his hourehold. He likewife iffued a proclamation, forbidding any perfon in arms to approach the court ; and Bothwel had a warrant to fee the fante put into execution. Though the Ling's proceedings in all this were perfectly agreeable to law, yet they vere giren out by his enemies as fo many indications of his averfion to the nobility, and ferred only to induce them to parade, armed, about the country in more numerous bodies.

The connctions entcred into by James with Henry alirmad the confpisators, and made then refolve to Rrike the great blow befure J.imes could avail himfelf of an alliznce that ieemed to place him above all oppofition either abroad or at home. The acquifition of Berwick to the crown of Sontland, which was looked upon to be ::s reond as concluded; the marriage of the duke of Rotheray with the daughter of the dowager and fifter in the confort queen of England; and, above all, the Klvis harmony which reigned berween James and the thates of his kingdom, rendered the contpirators in a manner disperate. Befides the earl Angus, the earls of Argylc and Lenox favoured the coalpiraturs; for wien the whole of James's convention with Eugland is confideref, and compared with afier events, nothing citn be more plain, than that the fuccefs of the confpt1:t:ors was owinr to his Eiglifh conneations; and $t$ at they made afe of them to affirm, that Scotland was ion to become a province of England, and that Jimes intunded to govern his fulj etts by an Englif, furee. Thole fipe:ous allegations did the confirators great fir ice, and inclined mathy, even of the moderate party, tu) thicir caute. 'They fonn took the field, appuinted their rendezvoufes, atud all the fouth of Scotland was in amms. James continued to rely upon the authority of his parliment; ankl fummoned, in the terms of law,

130
ficz atde tiance by i $2=$ colifp: r.iturs.
gers, and fet the law's of their country at open defiance. Sootland Even north of the Forth, the heads of the houfes of Gray and Drummond ipread the firit of difaffection through the popul us counties of Fife and Angus: but the counties north of the Grampians continued firm in their duty.

The duke of Rothefay was then a promifing youth about fifteen years of age; and the fubjenting the kingdon of Scotland to that of England being the chief, if not the only caufe urged by the rebels for thei: appearing in arms, they naturally threw their eyes upon that prince, as his appearance at their head would give Atrength and vigour to their caufe; and in this they were not deceived. James in the mean time, finding the inhabitants of the fouthern provinces were either engaged in the rebellion, or at beft obferved a cold neutrality, embarked on board of a veffel which was then lying in the frith of Forth, and paffed to the north of that river, not finding it fafe to go by land to Stirling. Arriving at the cafte, he gave orders that the The sulue. duke of Rothefay (as forefseing what afterwards hap. of Rothepened) Rould le put under the care of one Schaw of fay put Sauchie, whom he had made its governor, charging him not to fuffer the prince upon any acconnt to depurt out of the fort. The rebels giving out that fames had fed to Flanders, plundered his equipages and b iggage before they paffed the Forth; and they there found a large fum of money, which proved to be of the utmoft confequence to their affars. They then furprifed the caftle of Dunbar, and plundered the houfes of every man to the fouth of the Forth whom they furpected to be a royalif.

James was all this time making a progrefs, and holding courts of juilice, in the north, where the great families were entirely devoted to his fervice, pa:ticularly the earls of Huntley, Errol, and Murhal. Every day brought him frelh alarms from the fouth, which leit him no farther room either for delay or deliberation. The confpirators, notwithtanding the promifing appearance of their affars, found, that in a floort time their caufe nuft languifh, and their numbers dwindle, unlefs they were furnihed with fre!h pretexts, and headed by a perfon of the greatet authority. While they were deliberating who that perfon thould be, the carl of Angus boldly propufed the duke of Rothefay; and an immediate application was made to Schaw, the young prince's governor, whe fecretly favoured their 332
Succ 6. of the rebels. into confinement. caule, and was prevailed upon ly a confiderable fim of They ars mnney to put the prince into their hands, and to declare heeded by for the rebals.
James having ordered all the force in the norilh te af. femble, hu:ied to Perth (then called St Juhn's town), where he appointed the rendezvous of his army, which amounted to 30,000 men. A mong the other noblemen who attended him was the famous lord Dzwid Liadiay of the Byrcs (an officer of great courage and expe. rience, having long ferved in fureign countries), who headed 3000 font and ioco burie, molly raifed in Fiferhire. Upon lis approaching the king's perfin, he prefented him with a lorfe of remarkable fpirit and beauty, and informed his najelty, that he might truft his life to his agility and fure-thotednefs. Thic lord Ruthven, who was theriff of Strathern, and aricefor (if we miftake not) to the unforunate en is of G wry, joined James at the head of 3000 well armed men..

Ecothar. The whole arm; being alfembied, James preceeded to Stisling; but he was atomithed, when he was not ority
3.34 denica entratice into the calle, but faw the guns prit tfombles his ed againit his perion, and miderftend, for the firit time, zmny. that his fom was at che head of the rebelc. Schaw pretended that the duke of Rerthefay hatd been canied oth alcaint his wil: Iut the king's anfwer was, "Fye, trater, thatholl deccived rue ; and if 1 live Ithall be rebenged on thee, and whom thate be rewarced as thou hat ferved." James ly that wight in the town of Stirlage, where he was joined by all his army ; and under. thanding that the retiels $\%$ ere advancing, he formed his line ef battle. The earl of Atiol his urcele, who mats trufted by loth paties, propotat are aceommodation ; vhich was aconrdingly effeted, if we are to believe Aberctornhy and , ther hithorians; but we know not the terms, fir mus are momioned on cither fids.James is laid to have failed on his pari ; but had there Leen any irrounds 1 r fuch a charge againt him, there can farcely be a donilit but that the tebels would have philhed them. That a treaty was entered into is p: it deple ; and the eall of Athol furrondered him eh as a ho.lage into the hatels rf the rebels.

James was fentible of the advantage which pubic clamour gave to has cuenies; and he applied to the kangs of France and Eagland, and the pope, for their irterpotiti n. His holinds ramed Adrian de Catlello for his nurcio on that occation; and the two kings thaneatened toraite trocips ins the fervice of James. He, by a fatality roiurenmmon to weak princes, left the ft-ong callle of Edinburgh, where he might have been in lafety till his friends, whon had difperfed themfelves upon the faith of the bate negociation, could be realfembled; an 1 crollimg the F. rth, lie riade another attempt to be adnitted into the cable of Sitirling ; but wis difipponinted, and inf rmed that the rebels were at 'Torwoo. in the n-ighbrw hood, and le.dy to give him battle. Ile was in pollellion of the cathe of Blacknefs; his admisal, Wiod, commanded the Forth; and his loyal fu jeats in the nenth were upon their march to join lim. Hawdornden fiys, that the rebels had made a fhow of difmiting their troops, that they might draw James into the fild ; and that while he renained at Blacknefs, he was atiended by the earis of Mfonterfi, Gleme.tim, and the Dord. Maxwell and Ruthen. To

335 at negociation; but that was fon at an end, uprn the rebelo peremptorly requiring him to reflign his crown to his fon, that is, to then felycs.

The reixels had been inured to war. They confited chie!ly of burderers, well armed and dificiphed; in whoh they had the advantage of the king's Lowland's fuhects, who hat mo: been accultomed to arms. What the numbers on onth fides viere dies not clearly appear; but it is probable that the forces of James were fuperiur io, the rebcls. "liey were then at Galkirk; but they fom patled the Cerron, encamped above the bridge near Torwond, and made fuch difipefitions as rendered at b.ttele unatridabic, unlets Janies would have difpericd his amy, and goue on board
$3 \dot{3}$ Wood's lhips: but he did nut know himielf, and reConics to a folved on a batile. He rias encamped at a fimall briok hatte with mamed S.ruchie-jurn, near the lama fipoi of ground where tiem. the great Pruce had defeated the Englilh under Edward the feeond. The call of Mententh, we lords

Erfanc, Gubam, Ruthen, and Maxwell, enmmended the fita line of the king's army. Tie fecond was
 head of the Weithand ard Hightad man. 'The earl of Crawlend, with the lord Boyd and 1 indiay of Byies, commanded the rear, whirin the linge's mam Atrength confiled, and where he himforiapper re! i.s perfion, campisely armol, :and monurtud up a tle far. hor: whic! had been protanted to him by Li dia.
The frit line of the royatits ctlized that of the rebe's to give way; but the latter beinge firpiorted tü the Amandale men and borderers, the firtlanifece:d line of the king's army were brat back of the thisu. The little courage Jumes prifielfed hid Ioriaken lim at the firtt onfer; and he had put fpurs to lis herfe, ir. tendirg to gain the banks of the Forth, and in go on board one of Woni's thips. In pufing thercughtac villaye of Bannockbun, a woman who was filling heer pucher at the brook, frightened at the light of a man in armour galloping full diped, left it behind her ; and the honfe taking fright, the kin; "as thruwn to the grmand, amd carnied, bruited and raimed, by a mi!ler and lif wite, into thers hovel. He itrmediately calied for a pridt to make his conteffion; and the ruties domandiag his name and rank. "I was (fa:d he incautiouthy) four king this morning." Tire nomin, overcoma with ationilhment, clapped her hands, and rurning to the do: : called for a prietl to contefs the king. "I am a pried (faid one pating by), laad me to his majefly." Lieing introduced into the hovel, he fiw the hing coverch wits a coarfe cloth; and kneeling Ly laim, he all: ed James whether he thonght he could recover, it properly attended by phyfians? James anfwerias in tave affimative, the rillain pulled ont a dagger, and faibed him to the heart. Such is the dark accourt we are able to give of this prince's unhappy end. The name of the perfen who murdered lim is faid to have lec: Sir Andrew Borthwick, a prictl, one of the jope's knights. Some pretend that the Inrd Groly, and otlicts that Robert stirling of Kicir, was the rigicide ; and even Buchanan (the tenor of whofe hiftory is a jultithcation of this narder), is uncertain as to the name of the perion who gave him the fatal blow.

It is probable thit the royalits loft the battle chreugh the cowardice of James. Eiven atter his flight liis trocys fought bravely; but they were damped on icceiving the certain acceunts of his death. 'the prime, young as he was, had an idea dit the unnatural gart lie was acing, and before the batte he had given a thate ctarge for the fafety of lis tiather's pertion. Upoiz learine that he had retired from the neld, he fent orders that none thould purfue him; but they were ineffectual, the rebels being fertible that they culd have no fatcy but in the bing's death. When that was certifed, hecilitics feemed to ceafe; nor were the inya'ills purtised. The number of hain on both hides is uncentain; but it muth have been conliderable, is the earl of G.encairr, the lords Sempil, Enkine, and Ruthven, and other gentlemen of great eminence, are mentioned. As to tie duhte of Roiletay, who was $C$ ai) mentioned. 13 so the dunc of Ronlselay, who was ce ifurhis now king, he app ared inconfolabie whea he heard of fin it han his father's death; but the reb:ls ende.ivoural to e.lice ilea.h. lins grief, by the profution of honours they paid lanm when he was recognized as hing.

Tlie remorle and anguith of the yourg ling, men e-

Sentiand. flesing upon the unnatural part he had acted, was inexpreflible; and the noblemen who had been engaged in the rebellion became apprehenfive for their own fafety. The cataftrophe of the unfortunate James III. however, was not yet become public; and it was thought by many that he had gone aboard fome of the fhips belonging to the Scottilh admiral Sir Andrew Wood. James, willing to indulge hope as long as it was poffible, defired an interview with the admiral ; but the latter refufed to come on thore, unlefs he had Sir Andrew waited upon the king at Leith. He had again and again, by meffages, affured him that he knew nothing of the late king; and he had even offered to allow his hips to be fearched : yet fuch was the anxiety of the nerv king, that he could not be fatisfied till he had examined him in perfon. Young James had been long a Aranger to his father, fo that he could not have diftinguithed him eafily from others. When Wood, therefore, entered the rocm, being ftruck with his noble appearance, he afked him, "Are you my father ?" "I am not," replied Wood, burfting into tears; " but I was your father's true fervant, and while I live I flall be the determined enemy of his murderers." This did not fatisfy the lords, who dem.nded whether he knew where the king was. The admiral replied, that he knew not; and upon their queftioning him concerning his manceuvres on the day of battle, when his boats were feen plying back wards and forwards, he told them, that he and his brother had determined to affift the king in perfon; but all they could do was to fave fome of the royalifts in their fhips. "I would to God (fays he), my king was there iafely, for I would defend and keep hini fkaithlefs from all the traitors who have cruelly murdered him: for 1 think to fee the day to behold them nanged and drawn for their demerits." This fpirited declaration, and the freedom with which it was delivered, ftruck the guilty part of tbe council with difmay; but the fear of facrificing the hoftages procured Wood his freedom, and he was fuffered to depart to his fhips. When he came on hnard, he found his brother preparing to hang the two lords who had been left as boftages: which would certainly have been their fate, had the admiral been longer detained.

Wood had fcarcely reached the fhips, when the lords, calling the inhabitants of Leith together, offered them a large premium if they would fit out a fufficient force to deftroy that bo!d pirate and his crew, as they called Wood; but the townfmen, who, it feems, did not much care for the fervice, replied, that Wood's fhips were a match for any ten fhips that could be fitted out in Scotland. The council then removed to Edinburgh, where James IV. was crowned on the $24^{\text {th }}$ of June 1487.

In the month of October this year, the nobility and others who had been prefent at the king's coronation, converted themfelves into a parliament, and paffed an act by which they were invemnified for their rebeilion
mon the lords who had taken part with his father, before the parliament, to anfwer for their conduct. In confequence of this, no fewer than 28 lords were cited to appear at Edinburgh in the fpace of 40 days. The Trial of firit upon the lift was the lord David Lindfay, whofe Lord 1)aform of arraignment was as follows. "Lord David vid LindLiodfay of the Byres, anfwer for the cruel coming fay of againft the king at Bannockburn with his father, giving Byres. him counfel to have devoured the king's grace here prefent; and, to that effect, gave him a fword and a good horie to fortify him againft his fon. Your antiver hereto." Lord Lindfay was remarkable for the bluntnels of his converfation and the freedom of his fentiments; and being irritated by this charge, he delivered himfelf in fuch a manner concerning the treafon of the rebellious lords, as abafhed the boldef of his accufers. As they were unable to anfwer him, all they could do was to prefs him to throw himfelf upon the king's clemency; which he refufed, as being guilty of no crime. His brother, Patrick Lindfay, undertook to be his adyocate, and apologized upon his knees for the roughnefs of his behaviour, and at laft obferved an informality in the proceedings of the court; in confequence of which Lindfay was releafed, upon entering into recrgnizance to appear again at an appointed day : however, he was afterwards fent prifoner by the king's order, for a whole twelvemonth, to the caftle of Rothefay in the Ine of Bute.

The regicides now endeavoured to gain the public favour by affecting a ftrift adminiffration of juftice. The king was adviled to make a progrefs round the The new kingdom, attended by his council and judges; while, parliament in the mean time, certain noblemen and gentlemen were appointed to exercife juftice, and to fupprefs all kinds of diforders in their own lands and in thofe adjoining to them, till the king came to the age of 2 I . The memory of the late king was branded in the moft opprobrious manner. All juftices, fheriffs, and ftewarts, who were poffeffed of heritable offices, but who had taken up arms for the late king, were either deprived of them for three years, or rendered incapable of enjoying them fur ever after. All the young nobility who had been difinherited by their fathers for taking arms againft the late king, were, by act of parliament, reftored to their feveral lucceffions in the moft ample manner. At laft, in order to give a kind of proof to. the world that they intended only to refettle the fate of the nation, without prejudice to the lower ranks of fubjects, who did no more than follow the examples of their fuperiors, it was enacted, "That all goods and effects taken from burgeffes, merchants, and the fe who had only perfonal eftates, or, as they are callect, unlanded men, fince the battle of Stirling, were not only to be refored, but the owners were to be indemnified for their loffes; and their perfons, if in cuftody, were to be fet at liberty. Churchmen, who were taken in arms, were to be delivered over to their ordinances, to be dealt with by them according to the law." The caftle of Dunioar was ordered to be demolifhed; and fome Ifatutes were enacted in favour of commerce, and for the exclution of foreigners.

Thefe laft adts were paffed with a view to recompence the boroughs, who had been very active in their oppofition to the late king. However, the lords, before they diffolved their parliament, thought it necefia-

## 343

 Who is imprifoned. againt their late fovereign; after which, they ordered the at to be exemplified under the great feal of Scotland, that it might be producible in their juftification if called for by any foreign prince. They next proceeded to the arduous tafk of vindicatiog their rebellion in the eyes of the public; and fo far did they gain upon the king by the force of flattery, that he confented to fum-scotlond. sy to give fome public teftimony of their difapproving

345 Act relative to tlie king's matrisge. the late king's connection with England. It was therefore enacted, "That as the king was now of an age to marry a nnble princefs, born and defcended of a nolle and workipful boufe, an honcurable embally thould be fent to the realms of France, Brittany, Spain, and other places, in order to conclude the matter." This embafly was to be very fplendid. It was to confift of a bifhop, an carl, or lord of parliament, a fecretary, who was generally a elergyman, and a knight. They were to be attended by 50 horfemen; 50001 . was to be allowed them for the difcharge of their embafly, and they were empowered to renew the ancient league between France and Scotland; and, in the mean time, a herald, or, as he was called, a trufy fquire, was fent abroad to vifit the feveral courts of Eurupe, in order to find out a proper match for the king. One conlider-
346 They are oppuifed by tine Pope. The pope had laid under an interdiet of all thofe wholad appeared in arms againtt the late king; and the party who now governed Scotland were looked upon by all the powers of Europe as rebeis and murderers. The embafly was therefore fufpended for a confiderable time; for it was not till the year 149 t that the pope could be prevailed upon to take off the interditt, upon the mof humble fubmifions and profefions of repentance made by the guilty parties.

In the mean time, the many good quaiities which in. difcovered themfelves in the young king began to conciliate the affections of his people to him. Being confidered, however, as little better than a prifoner in the hands of his father's murderers, feveral of the nobility made ufe of that as a pretence for taking arms. The moft forward of thefe was the earl of Lenox, who with 2000 men attempted to furprife the town of Stirling; but, being betrayed by one of his own men, he was defeated, taken unawares, and the caftle of Dumbarton, of which he was the keeper, taken by the oppofite party. In the north, the earls of Huntley and Marfhal, with the Lord Forbes, complained that they had been deceived, and declared their refolution to revenge the late king's death. Lord Forbes having procured the bloody fhirt of the mardered prince, difplayed it on the point of a lance, as a banner under which all loyal fubjects should lift themfelves. However, alter the defeat of Lenox, the northern chieftains found themfelves incapable of marching fouthwards, and were therefore obliged to abandon their enterprife.
348 The caufe of the murdered king was next mudertaken Henry VII. by Henry VII. of England, who made an offer to Sir fends five mips for this purpofe,

Andrew Wood of five thips to revenge it. The admiral accepted the propofal ; but the Englifh behaving as pirates, and plundering indifcriminately all who came in their way, he thought proper to feparate himfelf from them, yet without offering to attack or oppofe them. Upon this, James was advifed to fend for the admiral, to offer him a pardon, and a commiffion to att againit the Eaglifh freebooters. Wood ac. cepted of the king's offer; and being well provided with ammunition and artillery, he, with two flips nnly, attacked the five Englth veffels, all of which he took, and brought their ciews prifoners to Leith, for which he was nobly rewarded by his majelly.

This conduct of Wood was hiishly refented by the king of England, who immediately vowed revenge.

The Scottifh admirai's hhips had been fitted out for Scotlar.d. commerce as well as war, and Henry commanded his 350 belt fea-officer, Sir Stephen Bull to intercept him on sir Siephen his eturn from Flanders, whether he had gone upon a Dull fent commercial voyage. Wood had no more than two againk the thips with him: the IEnglifh admiral had three; and Sintufazithofe much larger, and carrying a greater weight of nuiral. metal, than the Scontifh velfels. The Englim took their flation at the ifland of May, in the mouth of the Frith of Forth, and, hwing come unawares upon their enemies, fired two guns as a fignal for their furrendering themfelves. The Scotifh cumm inder encouraged his men as well as he could; and finding them determined to ftand by him to the laft, began the engagement in fight of numberlefs fpectators who appeared on both fides of the frith. The fight continued all that cay, and was renewed with redoubled fury in the morning; but, in the mean time, the cbb-tide and a fouth wind had carried buth fquadrons to the mouth of the Tay. Here the Englifh fought under great difadvantages, by reafon of the fand-bauks; and before they could get clear of them, all the three were obliged to fubmit to the Scots, who carried them to Dundee. Wood treat- 30 tt is ta ed his prifoners with great humanity; and having after- ken wish wards prefented them to King James, the latter difmiffed them not only without ranfom, but with prefents to the officers and crews, and a letter to King Henry. To this Henry returned a polite anfwer, a truce was concluded, and all differences for the prefent were accommodated.

James all this time had continued to difplay fuch moderation in his government, and appeared to have the advantage of his fubjects fo much at heart, that they became gradually well affected to his government, and in 1490 all parties were fully reconciled. We may from thence date the commencement of the reign of James IV.; and the next year the lappinefs of his kingdom was completed, by taking off the pope's interdict, and giving the king abfolution for the band he had in his fatincr's death.

Tranquillity being thus reftored, the negociations concerning the king's marriage began to take place, but met with feveral interruptions. In 1493, Henry VII. propofed a match between the king of Scotland and his coufin the princefs Catharine. James was too much attached to France to be fond of Englith connections, and probably thought this match below his dignity ; in confequence of which the propofal was trcated with contempt. However, notwithtanding this ill fuc- Marriage cefs, Henry made another offer of alliance with James; treaty with and, in 1495 , propofed a marriage betwixt him and his England. eldeft daughter Margaret. This propofal was accepted : but the match feems not so bave been at all agreeable to Jume; for, at the very time in which he was negociating the marriage, he not only proteded P'erkin Warbeck, the avowed enemy and pretender to the crown of Henry, but invaded England on his account. This conduct was highly refented by the Englifh parliament; but Henry himfelf forgave even this grofs infult, and the marriage negoc:ations were once more refumed. The bride was no more than ten years and fix months old; and being only the fourth degree of blood from James, it was neceffiry to procure a difpenfation from the pope. This being obtained, a treaty of perpetual peace !was concluded between the twe ェationcs

Scotland.

355
nations, on the oft of July 1503 , being the firf that had taken place for 170 years, limee the peace of Northampton, coneluded between Robert I. and Edward III.

One of the great ends which Henry had in riew in promoting this marriage, was to detach Jannes from the French interen: no fooner, therefore, was the treaty figned, than he wrote to his fonin-law to this purpore; who, however, politely declined to break with his aucient ally. On the 16 th of Junc, the royal bride fet nut from Richmond in Surry, in company with her father, who gave ber the convoy as far as Collewefton, the refidence of his mother the countcis of Richmond. After palling fome days there, the king refigned his daughier to the care of the earls of Surry and Ncrthumberland, who proceeded with her to the borders of Scotland. Here a rumber of the compary were parmitred to tuke their leave; but thofe who renained titll made a royal appearance. At Lamberton ehurch they were met by J:imes, attended by a numerous train of his nobility and ollicers of tiate. From Lamberton they proceeded to Dalkeith, and rext day to Eain. burgh; where the nuptials were celebrated with the greateft fplendor. On this occalion, it is laid that the Seots furpaffed all their cuefts in extravagance and luxniy: which mult have been owing to the great intercourfe and commerce which James and his fuljects maintained with foreign courts and countries.

After the celebration of the nuptials, James appcars to have enjoyed a tianquillity unknown dmoft to any of his prodeceffors; and began to malie a confiderable figure anong the European potentates. But the magnificence of his court and embathes, his liberality to thrangers and to learned men, his coftly edifizes, and, above all, the large fums he laid out in fhip-building, had now brought him into fome diffieulties; and he fis far attended to the advice and example of his fuhter-inlaw, that he fupplied his neceflities by 1eviving dormant penal laws, particularly with regard to wardthips and old titles of eltates, by whieh he raifed laige fumas. Though he did this without alfimbling his palliament,
yet he found agents who juflified thofe proceedings, in Sintland. the fame manner as Epton ard Dudley did thofe of Henry, minder the fanction of law. At laft, however, touched with the futerings of his fuljects, he ondered all profecutions to be fopped. He even went farther: for, fenfible of the deteitation into which his father-in-law's avarice had lrought himfelf and his adminititration, he orderel the minifers who had advifed him to thofe fhameful courtes to be imprifoned ; and fome of them, who probably had exceeded their commiffion, actually died in their confinement.

Abont this time, James applied himfelf, with incre- Applics dible affiduity, to the building of thins; onie of which, the St Nichatl, is fuppofed to have bicen the largeft then in the world ( m ). He worked with his own hands in building it; and it is plain, from his condut, that be wats afpiring to be a maritime power, in which he was encouraged by the excelient feamen which Scotland then predueed. The firlt eifay of his arms by fea whs in favour of his kinfman John king of Denmarl., This prince was brother to Margaret queen of Seotland; and had partly been called to the throne of Sxeden, and partly poffeffed it by force. He was oppofed by the adminiltrator, Sture, whom he pardoned after le was crowned. Sture, however, renewing his rebellion, and the Norwegians revolting at the fame time, John fonnt himfelf under fuch difficulties, that he was ferced to return to Denmark; but he left his Gueen in poffeflion of the eafle of Stockhoim, which fhe bravely defended againtt Sture and the Swedes. This hercic pincels became a great favourite witl James; and feveral letters that paffed between them are fill extant. The king of Denmark, next to the French monarel, was the favourite ally of James; who, casly in his reign, had compromifed fome difierences between them. It likewile appears, from the hillories of the north, 11 at bonth James and his farther had given great aniltance to his Danifh majefy in reducing the Norwegians; and he refolved to become a party in the war againit the Swedes, and the Lubeckers who affifed them, if the former
(m) Of this laip we have the follnwing acen nit by Lindfay of Piticottic. "In the fame year, the king of Seotland bigged a great Dhip, called the Great Michael, which was the greatef flip, and of moft frength, that ever fiiled in Encland or France. For this thip was of fo great flature, and took fo much timber, that, except Falkland fie wafted all the whods in Fife, which was oak-wond, by all timber that wis gotten out of Norway; for the was fo Itrong, and off fo great ler gth and breadth (all the wrights of Sontand, yea, and many other flangers, were at her device, by the king's comnandment, who wrought very butily in her: but it was a year and day ere fle was complete); to wit, fhe was twelve ferie feet of length, and thirty-fix foot within the fides. She was ten foot thick in the wall, outted jefts of nak in her wall, and boards on erery fide, to ftak and fo thek, that no cannon could go through her. This great fhip cumbered Sontand to get her to the fea. Firm that time that the was anoat and her mants and dails complete, with tows and anclors effeining therte, the was ecunted to the king to be thirty thoufand pounds of expericec, by ber artillery, which was very great and collly to the king, by all the telt of her orders, to wit, the bate riany canmons, fi: on every fide, with three great baffils, two behind in her dock, and no befure, with three hundred flot of imall artilety, that is to fay, myand and battrct-faleon, and quater-falcon, nings, peftelent ferpetens, and double-does, with hagtor and culverine, cors-bows and hanj-bows. She had thace hundred nariners is riil her ; fhe had fix fore of gunners to ute her atillery; aad had a thoufand men of war, by l.cr captain, hainpers, and quarter matters.
"When this thip paft to the fea, and was lying in the road, the king gart fhoot a camon at her, to effay her if the was wight; but $I$ heard fay, it deared ler not, and did her little fkaith. And if any man believe that this defeription of the fhip be not of verity, as we have written, let him pafs to the gate of Tillibartia, and there, afore the fame, ye will fee the length and breadth of her, planted with hawthorn, by the wright that halped to make her. As for other properties of her, Sir Andrew Wood is my author, who was quarter-mater of her; and Robert Bartyne, who was mafler-fhiprer."
ssotland. former continued in their revolt. Previous to this, he fent an ambaffador to offer his mediation berween John and his fubje?ts. The mediation was accordingly accepted of, and the negraciations were opened at Calmar. The deputies of Sweden not attending, John prevailed with th de of Denmark and Nirway to pronounce fentence of forfeiture againft Sture and all his adherents. In the mean time, the fiege of the cafte of Stockholm was fo warmly preffed, that the garrifon was diminilhed to a handful, and thofe deftitute of al! kind of provifions; fo that the brave queen was forced to capitulate. and to furfender up the fortrefs, on condition that the woald be futered to depart for Denmark ; but the capitulation was perfidiounly broken by Sure, and fhe was confined in a mon ittery.

It was on this occalion that James refolved to employ his maritime power. He wrote a letter, conceived in the ftrongeft terms, to the archbithop of Upfal, the primate of Sweden, exhorting him to employ all his authority in favour of the king; and another letter to the Lubeckers, threatening to declare war ag iumt them as well as the Swedes, if they jointly continued to atlin the rebels. According to Hollinfhed, James, in confequence of king John's application, gave the comuand of an army of 10,000 men to the eari of Arran, who replaced John upon his thronc. Though this does not atrictly appear to be truth, yet it is cer1ain, that, had it not been for James, John mult have fualk under the weight of his enemies. Sture, whofe arms had made grcat progrefs, hearing that a confiderable atmament was fitting out in Scotland, and knowine that James had prevailed with the French king to athit John likewife, agreed to releafe the queen, and to conduct her to the frontiers of Deumark; where he died. By this time, James's armament, which was commanded by the carl of Arran, had fet fail ; but perceiving that all matters vere adjufled between John and the Swedes, the Thips returned fooner than Jomes expeeted, "which (iays he, in a very polite letter he wrate to the queen upon the occation) they durf not have done, had they not brought me an account that her 1) minith majelly was in perfe? health and fafety." The feverity of John having eceafioned a frefh revolt, James again fent a fquadronto his alfitance, which appeared before Stockholm, and obliged the Lubeckers to conclude a new treaty.
Jimes, having thus honourably dieharged his engayements with his uncle the king of Denmat, turned his attention towatds the Femengo and H 11 inders, who had infulted his flag, on account of the aflalamee he had afforded the duke of Gueldres, as well as from motives of rapaciouftiefs, which diftinguifhed thofe trader, who are faid not only to have plundered the Soots thip;, but to have thrown thecir crews overboard to conceal thitir villany. James gave the command of a fquadron to Batem; who put to fea, and, without any ceremony, treated alt the Dutcla and Flemith triders who fell into lis hands as pirates, and fent their leads in hogitheads to Jumes. Sion after, Durton returned to Scotlatid, and brought with him a number oftich prits.s, which rendered his reputation as a famm farnows all over Lurope.-Jamas was then to much refpueded apan the continent, that wa know of nu refentmen: fhuwn

The peace with Enoland continued all the time of 3.359 Henry VII. nor did his fon Henry VIII, th ugh he quarrel had nut the fame teafun as his father to kecp well with lingowith the Scots, for fome time fhew any difprition to land. bresk with them. A breach, however, did very foon take place, which was niever afterwards thoroughly made 1p.

About 30 years before, one Jolin Barton (a relstion, probably, to the fimous Barton) commanded a trading velf:l, which was taken by two Portuguefe fencaptains in the poat of Shays; and the captain, with feveral Scotchmen, were killed in endeavouring to defend their property. The action was elteemed cowardIy as well as piratical, becaufe it was done under the proteftion of a large Portugucfe fquadron. Thee thip and the remaining part of the crcw, with the cargo, were carried to Purtugal, from whence no sedrefs could be obtained : and James III. granted letters of marque in John and Robert Bartons, heirs to the Burton who had been murdered. Upon the accelfion of Jumes 1 ". to the crown of Scotland, the letcers of marque were recalled, and a frien lly correfpondence was entered into between James and bis Portuguefe majetty. No redrels, however was to be had from the latter; and Ro. bert Barton being made a prifoner, and his hip a prize, he was detained in Zedland, till James procured his deliverance, by applying in his favour to the empercr Maximilian. Sir Andrew Barton tonk part in the quarrel and laving obtained a like letter of marque, he made dreadful depredations on the Portuguefe trade, and, according to Englifh authors, he plandered many Englifh fhips, on pretence of their carrying Portuguefe property, and made the navigation of the narrow feas dangerous to Englithmen. The court of London received daily comphints of barton's depredations; but Henry being at this time very averfe to a quarrel with James, thefe complaints being heard vith great coldneis at this comncil-board. The C"al of Surry had then two fons, gallant noblemen; and he declared to Henry's face, that while he had an eftate that could furaifh ont a bip, rer a fon who was captble of commanding onc, the marrow feas thould not be infefteciHenry could not dreourage this generous offer ; and letters of murgue were accordingiy granted to the two you g noblemen, Sir Th mas and S'r Edward Floward. The prizes that Barton had taken had rendered his thips immenfely rich, coniequemtly they were heary laden, and uafit for fighting; while we muy calily fappofe, that the thips of the Howards were clean, and of a Superior force in every refnect to thote of Bathon. After encountering a great deal of foul weather, Sir Thomas H warJ came up whth the Lyon, which was commanded by Sir Andrew: Barten in perfon; and Sir Edward fell in with the L' icom, Barton's wher thip. The event was fiech :ts might be expested from the iniquadity of t.e match. Si: Aadrew L.rroun was killed, white be was mimatiog, w:th has while, li, nento held out to the latt ; and both the Sootch thips beint taken, were canised an thampito london, with their crews frifozers.
